Geraldine Woods

More/less Trains Kathy Richardson, 2003 Assessing math concepts is a continuum of assessments that focus on important core concepts and related critical learning phases that must be in place for children to understand and be successful in mathematics. This series is based on the premise that teachers can provide more effective instruction when they are aware of the essential steps that children move through in developing an understanding of foundational mathematical ideas. The assessment tools presented here provide teachers with the information they need to determine precisely what children need to learn. Students progress confidently when teachers are able to provide appropriately challenging learning experiences. - Back cover

With our notebooks Quick Counting: Numbers Under 20 you can effectively and efficiently teach your 4-5-year-old children to add and subtract. Our notebook contains exercises that will help your child not only master actions such as addition and subtraction but also learn to count within ten; increase/decrease the number of objects by one, two, three and four using the number line; consolidate the concepts of greater-less-equal and solve inequalities; remember how numbers are written and dialed on the abacus; learn to count on an abacus in three or more steps; learn to tell the time on an analog clock. The material consists of 10 lessons plus additional exercises for homework to repeat. Theoretical material is at the beginning of the notebook with an explanation of how to perform the exercises correctly. A feature of our notebooks is the symbiosis of mental arithmetic and classical mathematics. Mental arithmetic is a UNIQUE method of teaching children that trains the speed of perception and processing of information and allows them to harmoniously develop both hemispheres of the brain at the same time by mentally visualizing the calculations on the abacus. A developed brain is the basis for successful future activities. The colorful notebook uses games as exercises, the main character of which is a curious rabbit Shoosha. The book will allow children to easily and naturally get acquainted with the design of the abacus and the rules of moving the beads. From the first lessons, the exercises train the ability to quickly state the previous and the

next numbers to a given one, the ability to count from anywhere in the direct and in reverse order, and to determine the place of a given number in a number series. In addition, the workbook contains a lot of funny pictures and interesting tasks that create positive motivation for learning and actively develop the logic, memory, attention, and intelligence of children.

Transforming the Workforce for Children Birth Through Age 8 National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success, 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of

the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Come all . . . to the exciting world of Big Top! Rob Harrell's three-ring comic strip has already packed the house with fans eager for his hilarious take on the circus and those who bring it to life.
