The Roman Empire in Crisis, 248–260 Paul N. Pearson,2022-05-05 “A clear, brisk writer,

Pearson is also quite thorough, taking a holistic attitude to the many facets of a confused, turbulent period.” —NYMAS Review This book is a narrative history of a dozen years of turmoil that begins with Rome’s millennium celebrations of 248 CE and ends with the capture of the emperor Valerian by the Persians in 260. It was a period of almost unremitting disaster for Rome, involving a series of civil wars, several major invasions by Goths and Persians, economic crisis, and an empire-wide pandemic, the “plague of Cyprian.” There was also sustained persecution of the Christians. A central theme of the book is that this was a period of moral and spiritual crisis in which the traditional state religion suffered greatly in prestige, paving the way for the eventual triumph of Christianity. The sensational recent discovery of extensive fragments of the lost *Scythica* of Dexippus sheds much new light on the Gothic Wars of the period. The author has used this new evidence in combination with in-depth investigations in the field to develop a revised account of events surrounding the great Battle of Abritus, in which the army of the emperor Decius was annihilated by Cniva’s Goths. The Roman Empire in Crisis, 248-260 sheds new light on a period that is pivotal for understanding the transition

between Classical civilization and the period known as Late Antiquity.

The Human Brain during the Third Trimester 260– to 270–mm Crown–Rump Lengths Shirley A.

Bayer,Joseph Altman,2024-01-11 This twelfth of 15 short atlases reimagines the classic 5-volume Atlas of Human Central Nervous System Development. This volume presents serial sections from specimens between 260 mm and 270 mm with detailed annotations. An introduction summarizes human CNS developmental highlights around 6.5 months of gestation. The Glossary (available separately) gives definitions for all the terms used in this volume and all the others in the Atlas. Key Features • Classic anatomical atlases • Detailed labeling of structures in the developing brain offers updated terminology and the identification of unique developmental features, such as germinal

matrices of specific neuronal populations and migratory streams of young neurons • Appeals to neuroanatomists, developmental biologists, and clinical practitioners • A valuable reference work on brain development that will be relevant for decades
