Learn Markdown Khurshid Alam,2018-03-21 Markdown is a plain text formatting method. Formatting is done in structured style using syntax, which is basically punctuations and characters. You don't need to use opening and closing tags as you do in Markup language. In Markdown, you don't need to create any styles for formatting; you can apply a style by typing a syntax. However, many of the Markdown editors have predefined styles that you need to simply apply to format content. In case, you don't find any syntax for formatting, you can simply use the tags that you may use in normal HTML.Markdown is a lightweight plain text file and is best preferred for the web-based content, standalone web pages, and single HTML pages such as readme, user license, privacy policy, terms & conditions, FAQs, email text, discussion forums, blogs, wikis, and others. It also gives good result for the Help files for handheld devices and HTML5. In Markdown, the document is formatted in a single source and can be easily converted to multiple formats including HTML, Word, PDF, other outputs based on the tools you use. bookdown Yihui Xie,2016-12-12 bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.
