Your Personal Math Tutor Henry H. Banville, 2007-09-27 Math is much easier when you know why you're doing it! Your Personal Math Tutor was initiated by many high school students helped by Henry (Mr. B) Banville over the years. He has shown them that math can be fun! You have made my self esteem stronger and you have shown me shortcuts to help me understand each problem. Laura M.- Geometry Now I have a better way to do my math. Audry R.- 5th grade ...and

ended the quarter with a 93! You're a great teacher. Matt D.- Algebra II He provides alternate learning methods which help me very much. Lynn Ann B.- College Algebra (went from C to A+) You explain Geometry so well! Amanda R. Your Personal Math Tutor is a supplement to textbooks on Algebra, Geometry, Trigonometry and Pre-Calculus, with aids for students preparing for the SAT exam, all in one book which can be passed on to siblings. There's no need to buy several books that each cover one topic. Contrary to methods presented in textbooks, he shows how to factor trinomials by inspection and investigation rather than trial and error. Geometry is a subject full of mathematical richness and beauty. But it's a subject that bewilders many students because it's so unlike the math they've done before—it requires the use of deductive logic in formal proofs. If you're having a hard time wrapping your mind around what that even means, you've come to the right place! Inside, you'll find out how a proof's chain

of logic works and even discover some secrets for getting past rough spots along the way. You don't have to be a math genius to grasp geometry, and this book helps you get un-stumped in a hurry! Find out how to decode complex geometry proofs Learn to reason deductively and inductively Make sense of angles, arcs, area, and more Improve your chances of scoring higher in your geometry class There's no reason to let your nerves get jangled over geometry—your understanding will take new shape with the help of Geometry For Dummies.

Mathematics via Problems: Part 2: Geometry Alexey A. Zaslavsky, Mikhail B. Skopenkov, 2021-08-24 This book is a translation from Russian of Part II of the book Mathematics Through Problems: From Olympiads and Math Circles to Profession. Part I, Algebra, was recently published in the same series. Part III, Combinatorics, will be published soon. The main goal of this book is to develop important parts of mathematics through problems. The authors tried to put together sequences of problems that allow high school students (and some undergraduates) with strong interest in mathematics to discover and recreate much of elementary mathematics and start edging into more sophisticated topics such as projective and affine geometry, solid geometry, and so on, thus building a bridge between standard high school exercises and more intricate notions in geometry. Definitions and/or references for material that is not standard in the school curriculum are included. To help students that might be unfamiliar with new material, problems are carefully arranged

to provide gradual introduction into each subject. Problems are often accompanied by hints and/or complete solutions. The book is based on classes taught by the authors at different times at the Independent University of Moscow, at a number of Moscow schools and math circles, and at various summer schools. It can be used by high school students and undergraduates, their teachers, and organizers of summer camps and math circles. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession.
