Landside Accessibility of Airports Milan Janić, 2018-08-02 This

book covers the analysis, modelling, planning, and design of airport landside access modes and their systems. It elaborates on the issues and related problems of airport landside accessibility in an innovative, comprehensive and systematic way. In addition to the general concept of accessibility, the book addresses the analysis and modelling of infrastructure-related, technological, operational, economic, social and environmental performance of road- and rail-based transport systems, as well as the core principles of their planning and design. The book provides guidelines on the modelling, planning, and design of airport landside access modes and their systems, which will contribute to the overall sustainable development of airports. Its main features are: presents a multidimensional examination of performance for specific airport landside access modes and their systems; pursues a qualitative and quantitative approach to developing performance indicators for estimating the sustainability of airport landside access modes and their systems; includes illustrative cases of airport landside accessibility, and numerical examples as exercises for assessing performance using the systems' indicators. As such, the book

offers a valuable source of information for all practitioners involved in analysing, planning and designing more environmentally friendly airport access modes and systems, and who want to learn how to overcome the issues and problems surrounding landside accessibility. It will also benefit students studying the analysis and modelling of transportation systems, and researchers seeking to promote improved sustainability at airports.

Nobody Gets Hurt and Other Lies Nicholas Day,2019-04-26 A group of young boys steal a death mask from an antique store and face violent retribution. Inept criminals who dream of a big payday plot to kidnap a child. Four video store clerks venture into a freak Los Angeles snowstorm and discover that not all monsters are special effects. Two sisters convince themselves there's no reason to be afraid of Aunt Alice and her secrets, now that she's dead. An amnesiac suspects that the man who claims to love her may in fact be keeping her a prisoner. From riverside towns in the Midwest and a future Paris above the clouds, to ancient lycanthropes and vindictive pachyderms, this collection of supernatural terrors and heartbreaking reality from award-nominated Nicholas Day, author of *Now That We're Alone* and *At the End of the Day I Burst into*

Flames, explores identity, addiction, love, and death. Plunge headfirst into fifteen tales of monsters, madness, and all the darkness human hearts can carry. Danger lurks around every corner, every decision a step closer to demise. Everybody gets what's coming to them in the end. But, of course, Nobody Gets Hurt.

Storytelling-Case Archetype Decoding and Assignment Manual (SCADAM) ,2016-01-08 Storytelling-Case Archetype Decoding and Assignment Manual reviews tourism and hospitality applications of Jung's work on archetypes in shaping behavior and unconscious/conscious thought. This book provides tools for confirming relevancy and falsifying incorrect archetype assignments of stories consumers and brands tell.

The London Underground, 1968-1985 Jim Blake,2024-01-30 LONDON'S HISTORIC, iconic Underground railway system in the period from 1968 to 1985 was a very different place to what it is in the 2020s. Much of its rolling stock dated from before World War Two, and with the exception of the new Victoria Line and the isolated Woodford to Hainault shuttle, trains were all two-person operated as the 1970s dawned. Transport photographer Jim Blake recorded most of the system on film before it would change

forever, concentrating on the older rolling stock as well as other items of interest due for replacement or modernisation, during this period when, regrettably, London Transport was often starved of much-needed funds by central government. The eminently sensible transfer of overall control of London's buses and Underground system to the city-wide Greater London Council at the beginning of 1970 was snatched away by the Thatcher regime in 1984, after which things rapidly went downhill. This book covers the years of GLC control, including the months prior to their taking charge in order to set the scene. Many rare and unusual scenes are included in this volume, especially of the then still basically intact portion of the uncompleted Northern Line extension between Drayton Park and Highgate, which had been so close to completion when work was halted during the war, but then abandoned in the early 1950s, incurring much wasted work and expenditure. For anyone with a serious interest in London's Underground, this book is essential reading, including as it does many previous unpublished photographs.

London's Railways, 1967–1977 Jim Blake,2015-09-30 This pictorial book covers London's railways from 1967 to 1977,

showing the transition from steam to diesel and electric traction. This volume has a very readable narrative, telling tales of the authors adventures during his many trips around the London railway network. Functional Fillers for Plastics Marino Xanthos,2006-03-06 A comprehensive and up-to-date overview of the major mineral and

organic fillers for plastics, their production, structure and properties, as well as their applications in terms of primary and secondary functions. Edited and co-authored by Professor Marino Xanthos with contributions by international experts from industry and academia, the book presents methods of mixing/incorporation technologies, surface treatments and modifications for enhanced functionality, an analysis of parameters affecting filler performance and a presentation of current and emerging applications.

Additionally, the novel classification according to modification of specific polymer properties rather than filler chemical composition will provide a better understanding of the relationships between processing, structure and properties of products containing functional fillers and the identification of new markets and applications. For engineers, scientists and technologists involved in the industrially important sector of polymer composites.
