Mobile Tech Report 2015 John R. Roberts, 2015-02-23 If you read technology news, you'll notice it's not just a story of amazing new product introductions, or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow

seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I've collected what happened in the industry in 2014 and make predictions on what will and won't happen in 2015. You can read what did happen in the mobile technology in 2014. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business, who's up, who's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones and choose the few to

share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2015 for the mobile technology industry, breakdowns of marketshare figures on the horse race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2014 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is figuring into our lives. I've divided the news into the subjects it covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about one topic at a time in the earlier chapters.

Blackberry's new business strategy. An analysis Daniel Kamau, 2017-05-08 Seminar paper from the year 2016 in the subject Business economics - Operations Research, , language: English, abstract: Blackberry is a Canadian-based company that was once a market leader in mobility solutions. However, its products have faced significant challenges from the leading industry players like Samsung, Sony, and iPhone among many others. The company has,

however, refused to face out, introducing different kinds of new strategies and relying on its core strengths to remain existing in the market. Most of the strategies it has launched previously have failed due to the rigid and closed operating system it has been using. However, the company finally gave in to pressure and embraced both android and windows platforms in 2016. The company has therefore combined the customer needs in the market with their strong reputation of ambient security to offer the enthusiasts with mobility solutions that can be very competitive in the market. How successful the ambitious strategy would remain a major area of interest, but various informing elements like the risks, challenges, and opportunities surrounding the new strategies are evident in the market. This paper explores the cases of the telephone company new strategies released in 2016 to embrace its key strengths, and the market needs to develop solutions that are believed to be game changers. The risks factors and the opportunities are also discussed in the paper. These are followed by strong recommendations that the company can assimilate for successful strategic implementations.

The Smartphone Elizabeth Woyke, 2014 We think we know everything about smartphones. We use them constantly. We depend on them for every conceivable purpose. We are familiar with every inch of their compact frames. But there is more to the smartphone than meets the eye. How are smartphones made? How have they shaped the way we socialise? And who tracks the movements they record? These are just some of the questions that journalist Elizabeth Woyke answers in an illuminating look at this feature of our day-to-day lives. Features interviews with key figures in industry.

Telecommunications U.S. Government Accountability Office, 2017-08-04 The rapid adoption of mobile phones has occurred amidst controversy over whether the technology poses a risk to human health as a result of long-term exposure to RF energy from mobile phone use. FCC and FDA share regulatory responsibilities for mobile phones. GAO was asked to examine several issues related to mobile phone health effects and regulation. Specifically, this report addresses (1) what is known about the health effects of RF energy from

mobile phones and what are current research activities, (2) how FCC set the RF energy exposure limit for mobile phones, and (3) federal agency and industry actions to inform the public about health issues related to mobile phones, among other things. GAO reviewed scientific research; interviewed experts in fields such as public health and engineering, officials from federal agencies, and representatives of academic institutions, consumer groups, and the mobile phone industry; reviewed mobile phone testing and certification regulations and guidance; and reviewed relevant federal agency websites and mobile phone user manuals.

Mobile Telecommunications in a High-Speed World Peter Curwen, Jason Whalley, 2016-07-22 Mobile Telecommunications in a High Speed World tells the story of 3G and higher-speed mobile communication technologies. Over ten years have passed since the first third-generation (3G) licences were awarded following debates about the merits of auctions versus 'beauty contests' then, nothing much happened. More licences were issued, a few roll-outs commenced and everyone began to think it had all been a horribly expensive mistake. That may still turn out to be the case, but in the meantime there have been massive developments in terms of the number of licences and launches worldwide, in the range of services that can be accessed, in the range of devices that can be used to access them, in operator strategies etc. Even the technology has improved considerably with 4G now under discussion. Much of this story has been chronicled, largely on the Internet, but the information is in tens of thousands of bits and pieces and a large part of it is either

misleading or just plain wrong. Here, Peter Curwen and Jason Whalley introduce the outcomes of research that has involved the compilation of a unique database which details every licence and launch worldwide involving 3G. The authors discuss the structure of the industry and the strategic behaviour of operators, as well as the social consequences of the spread of 3G. They examine the role of new entry upon competition, and present analysis of the main operators involved, the development of handsets and especially smartphones. A number of country case studies are included. This comprehensive and up-to-date volume includes a number of country studies and is written by two of the world's foremost researchers on this industry. Mobile Telecommunications in a High Speed World will serve the needs of students, academics and those involved, or contemplating involvement, with the telecoms industry. Why pay thousands of dollars to consultancies to separate the wheat from the chaff with respect to 3G when you can read this book.

The Mobile Mind Shift Ted Schadler, Josh Bernoff, Julie Ask, 2014-06-24 Mobile has reprogrammed your customers' brains. Your customers now turn to their smartphones for everything. What's tomorrow's weather? Is the flight on time? Where's the nearest store, and is this product cheaper there? Whatever the question, the answer is on the phone. This Pavlovian response is the mobile mind shift – the expectation that I can get what I want, anytime, in my immediate context. Your new battleground for customers is this mobile moment – the instant in which your customer is seeking an answer. If you're there for them, they'll love you; if you're not, you'll lose their business. Both entrepreneurial companies like Dropbox and huge corporations like Nestlé are winning in that mobile moment. Are you? Based on 200 interviews with entrepreneurs and major companies across the globe, The Mobile Mind Shift is the first book to explain how you can exploit mobile moments. You'll learn how to:

- Find your customer's most powerful mobile moments with a mobile moment audit.
- Master the IDEA Cycle, the business discipline for exploiting mobile. Align your business and technology teams in four steps: Identify, Design, Engineer, Analyze.
- Manufacture mobile moments as Krispy Kreme does – it sends a push notification when hot doughnuts are ready near you. Result: 500,000 app downloads, followed by a double-digit increase in same-store sales.
- Turn one-time product sales into ongoing services and engagement, as the Nest thermostat does. And master new business models, as Philips and Uber do. Find ways to charge more and create indelible customer loyalty.
- Transform your technology into systems of engagement. Engineer your business and technology systems to meet the ever-expanding demands of mobile. It's how Dish Network not only increased the efficiency of its installers but also

created new on-the-spot upsell opportunities. Mobile is rapidly shifting your customers into a new way of thinking. You'll need your own mobile mind shift to respond.

Mobile Services in the Networked Economy ,2005-01-01 The mobile services industry is going through a major transformation, which challenges many of the basic assumptions behind the existing business models. As the business paradigm shifts from voice-centric to data-centric mobile services, the ways of analyzing the industry need to evolve as well. Mobile Services in the Networked Economy provides new insight into the structure and dynamics of the mobile services industry by combining novel ideas from the complexity theory, from the research of vertical integration strategies and from the theories of networked organizations. These ideas and theories are then applied to the context of three different types of mobile services markets in Japan, Finland and the UK. The case analyses demonstrate how the three markets are currently going through very distinct phases of evolution in a continuum between two very different kinds of business environments. The analysis of the mobile services industry presented in this book will help the reader not only to understand the logic behind the way the industry looks today, but also to foresee possible future trends in the development of a given mobile services market.

The Internationalisation of Mobile Telecommunications Peter J. Curwen, Jason Whalley,2009-01-01 . . . the authors have a pleasant approach to arranging and commenting on their facts, which makes the book readable. . . readers wanting quantitative data about mobile networks, on which qualitative theories can be based, will be very well satisfied. Robert Milne, Info The

Journal of Policy, Regulation and Strategy for Telecommunications As a source of information on the mobile sector, the book is highly valuable. . . we should commend the authors for making a wealth of information accessible, and in my view, even for the most seasoned industry expert, the book will shed light on a dimension or aspect that has previously been overlooked or under valued. Wolter Lemstra, Competition and Regulation of Network Industries The Internationalisation of Mobile Telecommunications is a comprehensive look at the rapidly-changing market structure, the alternative technologies, the extent of globalization, and the ownership of firms in increasingly competitive mobile telecommunications markets around the world. This is an exceptionally valuable book for anyone interested in understanding current and future developments in mobile telecommunications. Stanford L. Levin, Southern Illinois University, Edwardsville, US Peter Curwen and Jason Whalley review the strategic operations of, and technological options available to, the 30 most prominent international mobile operators. This review is initially based upon the Asia-Pacific, African, European, Latin American and North American regions before moving on to take a worldwide perspective. The authors place these mobile operators within a wider business context via a broad ten-year appraisal of the companies involved in the entire telecommunications, media and technology (TMT) sector. The issue as to whether there truly is such a thing as a global mobile operator is addressed; the answer, in practice, is negative. Based upon the very latest data available, the underlying premise of the book is that mobile telecommunications is such a fast-moving sector that operators are obliged to alter their international strategies as circumstances unravel without necessarily having a long-term master plan, and hence that opportunism is a

hallmark of operators international strategies. This state-of-the-art overview of the internationalisation of mobile telecommunications will prove essential reading for academics and practitioners with a vested interest in technology, telecommunications and strategic management.
