Each one base station covers a certain region, the more cell towers in your general vicinity, the more precise result it delivers. So the thickness of cell towers decides the precision. Design of a mobile phone-based Artificial Intelligence (AI) application to assess dietary intake and provide nudges to improve healthy eating choices: Formative research in Ghana and Vietnam Braga, Bianca C.,Aberman, Noora-Lisa,Arrieta, Alejandra,Bannerman, Boateng,Burns, Adam,Folson, Gloria,Huynh, Phuong,Koch, Bastien,McCloskey, Pete,Nguyen, Phuong Hong,Zakariah-Akoto, Sawudatu,Hughes, David,Gelli, Aulo,2021-05-24 Background: Low quality diets are a public health problem affecting individuals of all ages worldwide. Nudging for Good (NFG) is a new research project aimed at developing, validating, and examining the feasibility of using artificial intelligence (AI)-based technology to improve adolescent girls' diets in urban Ghana and Vietnam. Objectives: Provide evidence to support the design of a new mobile phone intervention including: a) identifying the demand for mobile app to improve diets in adolescent girls; b) defining the intervention objectives and activities to be delivered via a mobile app; and c) assessing the potential for nudging functionality to be incorporated in the mobile app. Methods: This study used mixed methods including both literature and nutrition-related app reviews, as well as focus group discussions. A literature review was conducted using PubMed and Google Scholar databases, and intervention studies using technology to improve nutrition outcomes of adolescents were included. Nine focus group discussions (five in Ghana and four in Vietnam) were undertaken with 61 girls to gauge smartphone and internet access and use and to obtain feedback on the prototype of a mobile app. Results: Nine studies met the selection criteria for the literature review, including seven randomized control trials (RCTs) and two systematic reviews. The evidence from the literature on how technology-based nutrition interventions should be conducted and what should be the best outcomes of success was mixed. Most of the 22 apps reviewed required manual entry of dietary information, and recommended diets based on motivation to change body weight. In the focus groups discussions, the adolescents suggested modifications on the prototype of the mobile app we presented, and indicated possibility to regularly take pictures of foods and beverages during meal time. Conclusion: We did not find an app available in either the Ghana or Vietnam markets that could improve dietary quality of adolescents without focusing on weight. Most apps available only had manual features to log food intake, which is time consuming. Moreover, adolescents expressed interest in using a new, modified version of the app we presented. We aim at developing a new mobile phone application based on AI technology that gives personalized and reliable nutrition advice to improve adolescent girls' diets. However, the literature review was not conclusive on what should be the characteristics of an app and how interventions to measure an app's impact on dietary quality should be conducted.

Wireless Phones and Health II George L. Carlo,2007-05-08 From the time questions about the impact of wireless technology on public health were first raised in 1993 through the present, Wireless Technology Research, LLC (WTR) has been the largest independent surveillance and research program trying to identify and solve human health problems associated with wireless phones. In 1995 at the University "La Sapienza" of Rome, WTR sponsored the first comprehensive forum for the discussion of these issues. Papers from the 1995 State of the Science Colloquium were collected and published in Volume I of this series, *Wireless Phones and Health: Scientific Progress*. This second volume assembles papers presented at WTR's Second State of the Science Colloquium in Long Beach, CA, in June 1999; it contains the most comprehensive research on the public health impact of wireless phones to date. The operating words for the proper understanding of these data are science and public health. Science is a tool for making public health decisions, but the framework in which we are operating is truly that of public health. We are looking for problems that have to do with wireless technology. We are trying to decide how this technology impacts on the public for one purpose and one purpose alone, and that purpose is to solve problems that are identified. I would like to challenge you, the reader, to suspend your parochial orientation as you consider these latest findings.

early detection of the prevention of these health problems. They are diverse in the nature of the problems they deal with, methodologies, populations, cultures, and contain insights and a clear indication of the impact of individual, social, and environmental factors on Internet use-related addiction problems. The e-Book illustrates recent progress in the evolution of research, with great emphasis on gaming and smartphone problems, signaling areas in which research would be useful, even cross-culturally.
