"Michael Baxandall, Vision and the Work of Words " Robert Williams,2017-07-05 'The most important art historian of his generation? is how some scholars have described the late Michael Baxandall (1933-2007), Professor of the Classical Tradition at the Warburg Institute, University of London, and of the History of Art at the University of California, Berkeley. Baxandall's work had a transformative effect on the study of European Renaissance and eighteenth-century art, and contributed to a complex transition in the aims and methods of art history in general during the 1970s, '80s and '90s. While influential, he was also an especially subtle and independent thinker - occasionally a controversial one - and many of the implications of his work have yet to be fully understood and assimilated. This collection of 10 essays endeavors to assess the nature of Baxandall's achievement, and in particular to address the issue of the challenges it offers to the practice of art history today. This volume provides the most comprehensive assessment of Baxandall's work to date, while drawing upon the archive of Baxandall papers recently deposited at the Cambridge University Library and the Warburg Institute.

Achieving High Availability on Linux for System z with Linux-HA Release 2 Lydia Parziale,Antonio Dias,Livio Teixeira Filho,Dulce Smith,Jin VanStee,Mark Ver,IBM Redbooks,2009-04-13 As Linux® on System z® becomes more prevalent and mainstream in the industry, the need for it to deliver higher levels of availability is increasing. IBM® supports the High Availability Linux (Linux-HA) project, which provides high availability functions to the open source community. One component of the Linux-HA project is the Heartbeat program, which runs on every known Linux platform. Heartbeat is part of the framework of the Linux-HA project. This IBM Redbooks® publication provides information to help you evaluate and implement Linux-HA release 2 by using Heartbeat 2.0 on the IBM System z platform with either SUSE® Linux Enterprise Server version 10 or Red Hat® Enterprise Linux® 5. To begin, we review the fundamentals of high availability concepts and terminology. Then we discuss the Heartbeat 2.0 architecture and its components. We examine some of the special considerations when using Heartbeat 2.0 on Linux on System z, particularly Linux on z/VM®, with logical partitions (LPARs), interguest communication by using HiperSockets™, and Shoot The Other Node In The Head (STONITH) by using VSMERVE for Simple Network IPL (snIPL). By reading this book, you can examine our environment as we outline our installation and setup processes and configuration. We demonstrate an active and passive single resource scenario and a quorum scenario by using a single resource with three guests in the cluster. Finally, we demonstrate and describe sample usage scenarios.
