Visions of Savage Paradise Rebecca Parker Brien, 2006 Visions of Savage Paradise is the first major book-length study of seventeenth-century Dutch artist Albert Eckhout to be published in nearly seventy years. Eckhout, who was court painter to the colonial governor of Dutch Brazil, created life-size paintings of Amerindians, Africans, and Brazilians of mixed race in support of the governor's project to document the people and natural history of the colony. In this study, Rebecca Parker Brien provides a detailed analysis of Eckhout's works, framing them with discussions of both their colonial context and contemporary artistic practices in the Dutch republic.

The Dirges of Maldoror: An Illustrated English Translation of Les Chants de Maldoror

The Dividing Line Histories of William Byrd II of Westover Kevin Joel Berland, 2013-11-01 After his 1728 Virginia-North Carolina boundary expedition, Virginia planter and politician William Byrd II composed two very different accounts of his adventures. The Secret History of the Line was written for private circulation,

offering tales of scandalous behavior and political misconduct, peppered with rakish humor and personal satire. The History of the Dividing Line, continually revised by Byrd for decades after the expedition, was intended for the London literary market, though not published in his lifetime. Collating all extant manuscripts, Kevin Joel Berland's landmark scholarly edition of these two histories provides wide-ranging historical and cultural contexts for both, helping to recreate the social and intellectual ethos of Byrd and his time. Byrd enriched his narratives with material appropriated from earlier authors, many of whose works were in his library--the most extensive in the American colonies. Berland identifies for the first time many of Byrd's sources and raises the question: how reliable are histories that build silently upon antecedent texts and present borrowed material as firsthand testimony? In his analysis, Berland demonstrates the need for a new category to assess early modern history writing: the hybrid, accretional narrative.

A Guided Tour of Artificial Intelligence Research Pierre Marquis, Odile Papini, Henri Prade, 2020-05-08
The purpose of this book is to provide an overview of AI research, ranging from basic work to interfaces and applications, with as much emphasis on results as on current issues. It is aimed at an audience of master students and Ph.D. students, and can be of interest as well for researchers and engineers who want to know more about AI. The book is split into three volumes: - the first volume brings together twenty-three chapters dealing with the foundations of knowledge

representation and the formalization of reasoning and learning (Volume 1. Knowledge representation, reasoning and learning) - the second volume offers a view of AI, in fourteen chapters, from the side of the algorithms (Volume 2. AI Algorithms) - the third volume, composed of sixteen chapters, describes the main interfaces and applications of AI (Volume 3. Interfaces and applications of AI). This third volume is dedicated to the interfaces of AI with various fields, with which strong links exist either at the methodological or at the applicative levels. The foreword of this volume reminds us that AI was born for a large part from cybernetics. Chapters are devoted to disciplines that are historically sisters of AI: natural language processing, pattern recognition and computer vision, and robotics. Also close and complementary to AI due to their direct links with information are databases, the semantic web, information retrieval and human-computer interaction. All these disciplines are privileged places for applications of AI methods. This is also the case for bioinformatics, biological modeling and computational neurosciences. The developments of AI have also led to a dialogue with theoretical computer science in particular regarding computability and complexity. Besides, AI research and findings have renewed philosophical and epistemological questions, while their cognitive validity raises questions to psychology. The volume also discusses some of the interactions between science and artistic creation in literature and in music. Lastly, an epilogue concludes the three volumes of this Guided Tour of

AI Research by providing an overview of what has been achieved by AI, emphasizing AI as a science, and not just as an innovative technology, and trying to dispel some misunderstandings.

A Void Georges Perec, 2005 ...a daunting triumph of will pushing its way through imposing roadblocks to a magical country, an absurdist nirvana of humor, pathos, and loss.--Time magazine
A Void is a metaphysical whodunit, a story chock-full of plots and subplots, of trails in pursuit of trails, all of which afford Perec occasion to display his virtuosity as a verbal magician. It is also an outrageous verbal stunt: a 300-page novel that never once employs the letter E. The year is 1968, and as France is torn apart by social and political anarchy, the noted eccentric and insomniac Anton Vowl goes missing. Ransacking his Paris flat, his best friends scour his diary for clues to his whereabouts. At first glance these pages reveal nothing but Vowl's penchant for word games, especially for lipograms, compositions in which the use of a particular letter is suppressed. But as the friends work out Vowl's verbal puzzles, and as they investigate various

leads discovered among the entries, they too disappear, one by one by one, and under the most mysterious circumstances . . .
