*Symbolic Computation with Infinite Sequences of P-groups with Fixed Coclass* Dörte Feichtenschlager, 2010 The classification of finite  $p$ -groups is a much investigated problem, though in general it seems impossible. Leedham-Green & Newman defined a new invariant for finite  $p$ -groups, the coclass. They suggested to try to classify finite  $p$ -groups by coclass. One step towards such a classification was the introduction of so-called infinite coclass sequences by du Sautoy and Eick & Leedham-Green. The groups in such a sequence can be described by a parametrised presentation. For prime 2 and a fixed coclass  $r$  it holds that almost all 2-groups of coclass  $r$  fall into finitely many infinite coclass sequences. So describing the infinite sequences yields an almost classification in these cases. In this work it is shown that using the parametrised presentations one can compute certain invariants for almost all groups in an infinite coclass sequence, especially the Schur multiplier. This is done by introducing a way to work with almost all groups at a time by a symbolic computation.

*Intellectual Property Management in R&D Collaborations* Martin A. Bader, 2006-10-13 This work examines the current, relevant and complex problem of how companies can take an intellectual property lead within research and development collaborations. Special emphasis is placed on the early phases of the innovation process and the service industry sector in which intellectual property management is still a new phenomenon. The author derives archetypes for managing intellectual property in collaborations and analyses their strengths and weaknesses.

*Growth Theory of Subharmonic Functions* Vladimir S. Azarin,2008-12-14 In this book an account of the growth theory of subharmonic functions is given, which is directed towards its applications to entire functions of one and several complex variables. The presentation aims at converting the noble art of constructing an entire function with prescribed asymptotic behaviour to a handicraft. For this one should only construct the limit set that describes the asymptotic behaviour of the entire function. All necessary material is developed within the book, hence it will be most useful as a reference book for the construction of entire functions.
