Fading Neon Lights: An Archive of Hong Kong's Visual Culture Brian Sze-hang KWOK,2023-03-10 Suspended above us with intricate patterns and flamboyant colours, the neon signs of Hong Kong easily guide us to local businesses, Chinese restaurants, bars, and department stores. Apart from marketing and advertising, these neon signs actually convey much more — and mean much more to those who view the signs as a part of their home. This book documents Hong Kong's neon signs whilst taking on a historical, socio-cultural, and contextual study of visual culture around the city. It explores the inter-related components of neon signs, including each sign's unique visual aesthetic and design, the history of craftsmanship and training, and how the streetscape relates to Hong Kong's consumer culture. With an underlying theme of photographic conservation and an array of vibrant images, the author brings the everyday signage of Hong Kong to life.

Tales from the Pumpkin King's Cameraman Pete Kozachik,2021-06-01 A Captivating Tour Behind the Camera on Some of Hollywood's Most Beloved Films Tales from the Pumpkin King's Cameraman is a thrilling and entertaining memoir that relates the behind-the-scenes on some of the most renowned cult classic films ever produced including The Nightmare Before Christmas, Corpse Bride, and Star Wars. Author and long-time cinematographer, Pete Kozachik writes about his personal experience working as a cameraman alongside some of the most acclaimed directors and producers including Tim Burton and Henry Selick. Exclusive Look. With a career spanning nearly four decades as director of photography specializing in stop-motion and filming model trick recordings, Kozachik compellingly combines his extensive expertise with his funny and colloquial prose to enchant readers in this inside look into the film industry. With insightful and technical details juxtaposed with the author's personal interludes about filmmaking, the memoir also includes a collection of rare photographs, both in front and behind the camera on sets including: • The Nightmare Before Christmas • Corpse Bride • James and the Giant Peach • Coraline • The Matrix Reloaded Lights, camera, action. Kozachik's autobiography is filled with personal observations and unique anecdotes sure to inspire and educate. With great intimacy, Kozachik offers a divulging tour off camera for the very first time.

Handbook of Nanophysics Klaus D. Sattler,2010-09-17 The field of nanoscience was pioneered in the 1980s with the

groundbreaking research on clusters, which later led to the discovery of fullerenes. Handbook of Nanophysics: Clusters and Fullerenes focuses on the fundamental physics of these nanoscale materials and structures. Each peer-reviewed chapter contains a broad-based introduction and enhances understanding of the state-of-the-art scientific content through fundamental equations and illustrations, some in color. This volume covers free clusters, including hydrogen, bimetallic, silicon, metal, and atomic clusters, as well as the cluster interactions. The expert contributors examine how carbon fullerenes are produced and how to characterize their stability. They discuss the structure, properties, and behavior of carbon fullerenes, including the smallest possible fullerene: C₂₀. The book also looks at inorganic fullerenes, such as boron fullerenes, silicon fullerenes, nanocones, and onion-like inorganic fullerenes. Nanophysics brings together multiple disciplines to determine the structural, electronic, optical, and thermal behavior of nanomaterials; electrical and thermal conductivity; the forces between nanoscale objects; and the transition between classical and quantum behavior. Facilitating communication across many disciplines, this landmark publication encourages scientists with disparate interests to collaborate on interdisciplinary projects and incorporate the theory and methodology of other areas into their work.

Neurology of Vision and Visual Disorders, 2021-04-06 Neurology of Vision and Visual Disorders, Volume 178 in the Handbooks of Neurology series provides comprehensive summaries of recent research on the brain and nervous system. This volume reviews alterations in vision that stem from the retina to the cortex. Coverage includes content on vision and driving derived from the large amount of time devoted in clinics to determining who is safe to drive, along with research on the interplay between visual loss, attention and strategic compensations that may determine driving suitability. The title concludes with vision therapies and the evidence behind these approaches. Each chapter is co-written by a basic scientist collaborating with a clinician to provide a solid underpinning of the mechanisms behind the clinical syndromes. Reviews the neurological underpinnings of visual perception disorders Encompasses the cortex to the retina Covers functional organization, electrophysiology and subcortical visual pathways Discusses assessment, diagnosis and management of visual perception disorders Includes international experts from Australia, Canada, Denmark, Germany, Singapore, and the UK and US

Colour Perception Rainer Mausfeld, Dieter Heyer, 2003-11-06 Colour has long been a source of fascination to both scientists and philosophers. In one sense, colours are in the mind of the beholder, in another sense they belong to the external world. Colours appear to lie on the boundary where we have divided the world into 'objective' and 'subjective' events. They represent, more than any other attribute of our visual experience, a place where both physical and mental properties are interwoven in an intimate and enigmatic way. The last few decades have brought fascinating changes in the way that we think about 'colour' and the role 'colour' plays in our perceptual architecture. In Colour Perception: Mind and the physical world, leading scholars from cognitive psychology, philosophy, neurophysiology, and computational vision provide an overview of the contemporary developments in our understanding of colours and of the relationship between the 'mental' and the 'physical'. With each chapter followed by critical commentaries, the volume presents a lively and accessible picture of the intellectual traditions which have shaped research into colour perception. Written in a non-technical style and accessible to an interdisciplinary audience, the book will provide an invaluable resource for researchers in colour perception and the cognitive sciences.

Encyclopedia of Color Science and Technology Renzo Shamey, 2023-09-29 This fully revised and expanded 2nd edition provides a single authoritative resource describing the concepts of color and the application of color science across research and industry. Significant changes for the 2nd edition include: New and expanded sections on color engineering More entries on fundamental concepts of color science and color terms Many additional entries on specific materials Further material on optical concepts and human visual perception Additional articles on organisations, tools and systems relevant to color A new set of entries on 3D presentation of color In addition, many of the existing entries have been revised and updated to ensure that the content of the encyclopedia is current and represents the state of the art. The work covers the full gamut of color: the fundamentals of color science; the physics and chemistry; color as it relates to optical phenomena and the human visual system; and colorants and materials. The measurement of color is described through entries on colorimetry, color spaces, color difference metrics, color appearance models, color order systems and cognitive color. The encyclopedia also has extensive coverage of applications throughout industry, including color imaging, color capture, display and printing, and descriptions of color encodings, color management, processing color and applications relating to color synthesis for computer graphics are included. The broad scope of the work is illustrated through entries on color in art conservation, color and architecture, color and education, color and culture, and biographies of some of the key figures involved in color research throughout history. With over 250 entries from color science researchers across academia and industry, this expanded 2nd edition of the Encyclopedia of Color Science and Technology remains the most important single resource in color science.

The Oxford Compendium of Visual Illusions Arthur Gilman Shapiro, Dejan Todorović, 2017 Visual illusions are compelling phenomena that draw attention to the brain's capacity to construct our perceptual world. The Compendium is a collection of over 100 chapters on visual illusions, written by the illusion creators or by vision scientists who have investigated mechanisms underlying the phenomena. --
