Canadian Immunization Guide Canada. Comité consultatif national de l'immunisation, Canada. National Advisory Committee on Immunization, 2006 The seventh edition of the Canadian Immunization Guide was developed by the National Advisory Committee on Immunization (NACI), with the support of the Immunization and Respiratory Infections Division, Public Health Agency of Canada, to provide updated information and recommendations on the use of vaccines in Canada. The Public Health Agency of Canada conducted a survey in 2004, which confirmed that the Canadian Immunization Guide is a very useful and reliable resource of information on immunization.

**Innovation in Global Health Governance** Andrew F. Cooper, 2016-05-23 Analyzing twenty-first century innovations in global health governance, this volume addresses questions of pandemics, essential medicines and disease eradication through detailed case studies of critical and rapidly spreading infectious diseases such as HIV/AIDS and SARS and 'lifestyle' illnesses such as tobacco-related illnesses, all of which are at the centre of the current global health challenge. Given its contemporary focus and wide range of world leading experts, this study is highly suitable for courses on global governance generally and global public health specifically across political science, economics, law, medicine, nursing and related fields. Scholars, practitioners and clinicians seeking a context for their front line health care provision will find this volume invaluable.

Spin Doctors Nora Loreto, 2021-11-24T00:00:00Z As Canada was in the grips of the worst pandemic in a century, Canadian media struggled to tell the story. Newsrooms, already run on threadbare budgets, struggled to make broader connections that could allow their audience to better understand what was really happening, and why. Politicians and public health officials were mostly given the benefit of the doubt that what they said was true and that they acted in good faith. This book documents each month of the first year of the pandemic and examines the issues that emerged, from racialized workers to residential care to policing. It demonstrates how politicians and uncritical media shaped the popular understanding of these issues and helped to justify the maintenance of a status quo that created the worst ravages of the crisis. Spin Doctors argues alternative ways in which Canadians should understand the big themes of the crisis and create the necessary knowledge to demand large-scale change.

**Pathogens for War** Donald H. Avery, 2013-04-28 Pathogens for War explores how Canada and its allies have attempted to deal with the threat of germ warfare, one of the most fearful weapons of mass destruction, since the Second World War. In addressing this subject, distinguished historian Donald Avery investigates the relationship between bioweapons, poison gas, and nuclear devices, as well as the connection between bioattacks and natural disease pandemics. Avery emphasizes the crucially important activities of Canadian biodefence scientists – beginning with Nobel Laureate Frederick Banting – at both the national level and through cooperative projects within the framework of an elaborate alliance system. Delving into history through a rich collection of declassified documents, Pathogens for War also devotes several chapters to the contemporary challenges of bioterrorism and disease pandemics from both national and international perspectives. As such, readers will not only learn about

Canada's secret involvement with biological warfare, but will also gain new insights into current debates about the peril of bioweapons – one of today's greatest threats to world peace.

The Last Plague Mark Osborne Humphries, 2013-01-01 The 'Spanish' influenza of 1918 was the deadliest pandemic in history, killing as many as 50 million people worldwide. Canadian federal public health officials tried to prevent the disease from entering the country by implementing a maritime quarantine, as had been their standard practice since the cholera epidemics of 1832. But the 1918 flu was a different type of disease. In spite of the best efforts of both federal and local officials, up to fifty thousand Canadians died. In *The Last Plague*, Mark Osborne Humphries examines how federal epidemic disease management strategies developed before the First World War, arguing that the deadliest epidemic in Canadian history ultimately challenged traditional ideas about disease and public health governance. Using federal, provincial, and municipal archival sources, newspapers, and newly discovered military records – as well as original epidemiological studies – Humphries' sweeping national study situates the flu within a larger social, political, and military context for the first time. His provocative conclusion is that the 1918 flu crisis had important long-term consequences at the national level, ushering in the 'modern' era of public health in Canada.

**Paddling the Boreal Forest** Max Finkelstein, James Stone, 2004-11-29 The boreal forest of Quebec/Labrador -- some of the most rugged and isolated land in Canada -- has captivated avid canoeists for generations. In the latter 19th and early 20th centuries, the intrepid A.P. Low of the Geological Survey of Canada spent, in total, more than ten years of his working life surveying the area. Employing Aboriginal canoeists and guides, he travelled by canoe, snowshoe and sailing vessel to map and document much of this vast territory. Challenged by the mystique of this extraordinary Canadian, canoeists Max Finkelstein and James Stone retraced Low's routes -- by their admission, their toughest canoe trip ever! Using archival sources, oral history and personal experience, they tell the story of A.P. Low and, in the process, reveal the environmental issues now facing this much threatened Canadian wilderness. Once again Max Finkelstein has blessed us with his incredible ability to make history of exploration come alive. Rather than sit behind a desk and try to imagine the 'misadventures' Low would have had, he goes out and duplicates them, and along the way creates a few tales of his own. This is one great read and we should be thankful that people like Max and Jim Stone exist in this world of ours. - Kevin Callan, well-known author and

canoeist From A.P. Low's logs and reports, Max Finkelstein and Jim Stone give vitality to that great geological surveyor. Interspersed are vivid accounts of their own challenging canoe voyages on the same rivers and portages of the boreal forest and rock in the James Bay/Ungava/Labrador country of the Cree, Innu and Inuit. What emerges is an eloquent testimonial for the wilderness canoe trip in the Canadian experience. – Bruce W. Hodgins, Emeritus Professor of History, Trent University; President, Camp Wanapitei; Member, Advisory Council, Canadian Canoe Museum

1950s Canada Nelson Wiseman, 2022-11-01 While the 1950s in Canada were years of social conformity, it was also a time of political, economic, and technological change. Against a background of growing prosperity, federal and provincial politics became increasingly competitive, intergovernmental relations became more contentious, and Canada's presence in the world expanded. The life expectancy of Canadians increased as the social pathologies of poverty, crime, and racial, ethnic, and gender discrimination were in retreat. 1950s Canada illuminates the fault lines around which Canadian politics and public affairs have revolved. Chronicling the themes and events of Canadian politics and public affairs during the 1950s, Nelson Wiseman reviews social, economic, and cultural developments during each year of the decade, focusing on developments in federal politics, intergovernmental relations, provincial affairs, and Canada's role in the world. The book examines Canada's subordinate relationship first with Britain and then the United States, the interplay between Quebec's distinct society and the rest of Canada, and the regional tensions between the inner Canada of Ontario and Quebec and the outer Canada of the Atlantic and western provinces. Through this record of major events in the politics of the decade, 1950s Canada sheds light on the rapid altering of the fabric of Canadian life.

**This Small Army of Women** Linda J. Quiney, 2017-05-01 With her linen head scarf and white apron emblazoned with a red cross, the Voluntary Aid Detachment nurse, or VAD, has become a romantic emblem of the Great War. This book tells the story of the nearly 2,000 women from Canada and Newfoundland who volunteered to "do their bit" overseas and at home. Well-educated and middle-class but largely untrained, VADs were excluded from Canadian military hospitals overseas (the realm of the professional nurse) but helped solve Britain's nursing deficit. Their struggle to secure a place at their brothers' bedsides reveals much about the tensions surrounding amateur and professional nurses and women's evolving role outside the home.

**COVID-19 in Manitoba** Andrea Rounce, Karine Levasseur, 2020-11-26 On 12 March 2020 Manitoba confirmed its first case of COVID-19. One week later, a province-wide state of emergency was declared, ushering in a new sense of urgency and rarely used government powers to protect Manitobans from the devastating global reach of the novel coronavirus. The wide-ranging impacts of the pandemic have touched every facet of Manitoba society and provincial responsibility, including health, economic development, social services, and government operations. COVID-19 has challenged the conventional policy-making process—complicating agenda setting and policy formulation, adoption, implementation, and evaluation—while governments have been under pressure to make swift decisions in life-and-death matters. New programs must address urgent and shifting health and economic realities, but also anticipate future waves of COVID-19 and potentially significant repercussions for future governments. COVID-19 in Manitoba: Public Policy Responses to the First Wave seeks to understand how Manitoba fared during the first months of the pandemic, with twenty-seven chapters that address key aspects of the pandemic and discuss how government policy can help lay the foundation for resiliency in the midst a continuing public-health crisis. This open-access volume is an essential resource for citizens and policy-makers alike, as it identifies policy gaps and successes of Manitoba's early COVID response and points to strategies to prepare for future waves of the pandemic.

Medical Textiles Holly Morris, Richard Murray, 2021-12-22 This textbook aims to ensure that advances in medical textiles are addressed and that recent developments are able to be appreciated and understood not only by medical practitioners and healthcare personnel but also by textile scientists and technologists. The idea is to stimulate collaborative research and development in the field of medical textiles and to equip researchers with an understanding of the steps they need to take to ensure that their efforts, be they to develop new devices for implantation or items for external application, are carried out in such a way as to improve their effectiveness and enhance the prospects for their implementation. Attention is drawn to the need to improve outcomes in the practical setting and to guidance on the detailed planning required prior to engaging in experimental work. Standard tests can help researchers to monitor performance, but for some important applications such as those required to demonstrate antimicrobial and fluid-repellent performance in most items of protective wear, standard tests consistently fall seriously short in terms of predicting how well they might work in the practical setting. Guidance is therefore given for their further development. Chapters within the textbook cover: The history of innovation within medical textiles with particular attention given to key concepts of the latter part of the 19th Century and subsequent associated developments. Textile and polymer science underpinning fibres, fabrics, nano-fibre technology and the functional finishes that can be applied to enhance the performance of medical textile

products. Woven, knitted, nonwoven and braided fabrics and the key performance characteristics of each fabric type which make them particularly suited to specific medical textile roles such as mesh, grafts, filtration and scaffolds for tissue engineering. Implantable medical textiles, non-implantable medical textiles, health and hygiene products and extracorporeal devices that use textile products. Legislative requirements for medical devices. The design of experiments and suitability for purpose of textile test methods. Case studies to illustrate how medical textiles are applied in practice. The book provides essential reading for textile professionals, biomedical engineers, and others involved in the research, design and engineering of medical and healthcare appliances, and for those employed in the medical profession wishing to gain new insights into the wealth of materials at their disposal.

*Virus Mania* Torsten Engelbrecht, Claus Köhnlein, Samantha Bailey, Stefano Scoglio, 2021-04-22 The book 'Virus Mania' has been written with the care of a master-craftsman, courageously evaluating the medical establishment, the corporate elites and the powerful government funding institutions. Wolfgang Weuffen, MD, Professor of Microbiology and Infectious Epidemiology The book 'Virus-Wahn' can be called the first work in which the errors, frauds and general misinformations being spread by official bodies about doubtful or non-virus infections are completely exposed. Gordon T. Stewart, MD, professor of public health and former WHO advisor - - - The population is terrified by reports of so-called COVID-19, measles, swine flu, SARS, BSE, AIDS or polio. However, the authors of *Virus Mania*, investigative journalist Torsten Engelbrecht, Dr. Claus Köhnlein, MD, Dr. Samantha Bailey, MD, and Dr. Stefano Scoglio, BSc PhD, show that this fearmongering is unfounded and that virus mayhem ignores basic scientific facts: The existence, the pathogenicity and the deadly effects of these agents have never been proven. The book *Virus Mania* will also outline how modern medicine uses dubious indirect lab tools claiming to prove the existence of viruses such as antibody tests and the polymerase chain reaction (PCR). The alleged viruses may be, in fact, also be seen as particles produced by the cells themselves as a consequence of certain stress factors such as drugs. These particles are then picked up by antibody and PCR tests and mistakenly interpreted as epidemic-causing viruses. The authors analyze all real causes of the illnesses named COVID-19, avian flu, AIDS or Spanish flu, among them pharmaceuticals, lifestyle drugs, pesticides, heavy metals, pollution, malnutrition and stress. To substantiate it, the authors cite dozens of highly renowned scientists, among them the Nobel laureates Kary Mullis, Barbara McClintock, Walter Gilbert and Sir Frank Macfarlane Burnet as well as microbiologist and Pulitzer Prize winner René Dubos, and it presents more than 1,400 solid scientific references. The topic of *Virus Mania* is of pivotal significance. Drug makers and top scientists rake in enormous sums of money and the media boosts its audience ratings and circulations with sensationalized reporting (the coverage of the New York Times and Der Spiegel are specifically analyzed). The enlightenment about the real causes and true necessities for prevention and cure of illnesses is falling by the wayside. For more reviews, see the older edition of *Virus Mania*
