*Call Auction Trading* Robert A. Schwartz,John Aidan Byrne,Antoinette Colaninno,2003-03-31 The electronic call auction is an important trading vehicle in many market centers around the world, and it should play a far more central role in the U.S. equity markets. Yet call auctions are not known or understood by many market participants in the U.S. The purpose of Call Auction Trading: New Answers to Old Questions is to consider how a call auction facility operates and its broader role in the marketplace. A spectrum of questions are raised and debated. What is a call auction? How should call auctions be designed? How should call auction and continuous trading be integrated in a hybrid market structure? What is the price discovery function of a call auction, especially at market openings? When the dust settles on the answers, it may be recognized that the introduction of electronic call auction trading in our markets is one of the most profound changes in U.S. equity market structure that could be made.

*International Development Law* Rumu Sarkar,2020-03-26 This book describes how international development works, its shortcomings, its theoretical and practical foundations, along with prescriptions for the future. International Development Law provides the reader with new perspectives on the origins of global poverty, identifies legal impediments to sustainable economic growth, and provides a better understanding of the challenges faced by the international community in resolving global poverty issues. The text is structured into two basic parts: the first part deals with the theoretical and philosophic foundations of the subject, and the second part sets forth issues relating to the international financial architecture, namely, international borrowing practices, privatization, and emerging economies. In particular, the book provides new, innovative analysis on corruption as an impediment to sustainable development. The three interlocking facets of corruption are examined: transnational organized crime, Islamic-based international terrorism, and corruption within emerging economies and the international banking system. Thus fresh new analysis adds depth and clarity to a field that heretofore has been scattered and superficial. Finally, the "right to development" within the international human rights discourse is critically reviewed, particularly in light of new jurisprudence emerging from the African context. This book offers a fresh, new and balanced legal perspective on the development process. The text has been rigorously researched and has many practical facets based on the author's professional experience within the international development field. It is an invaluable research and teaching tool since it takes a multidisciplinary approach to putting complex issues, legal trends and political questions into a clear, new perspective that is highly analytical as well as accessible to the reader. The author's elegant legal prose is both powerful and persuasive.

**Multi-dimensional Approaches Towards New Technology** Ashish Bharadwaj,Vishwas H. Devaiah,Indranath Gupta,2018-07-23 This open access edited book captures the complexities and conflicts arising at the interface of intellectual property rights (IPR) and competition law. To do so, it discusses four specific themes: (a) policies governing functioning of standard setting organizations (SSOs), transparency and incentivising future innovation; (b) issue of royalties for standard essential patents (SEPs) and related disputes; (c) due process principles, procedural fairness and best practices in competition law; and (d) coherence of patent policies and consonance with competition law to support innovation in new technologies. Many countries have formulated policies and re-oriented their economies to foster technological innovation as it is seen as a major source of economic growth. At the same time, there have been tensions between patent laws and competition laws, despite the fact that both are intended to enhance consumer welfare. In this regard, licensing of SEPs has been debated extensively, although in most instances, innovators and implementers successfully negotiate licensing of SEPs. However, there have been instances where disagreements on royalty base and royalty rates, terms of licensing, bundling of patents in licenses, pooling of licenses have arisen, and this has resulted in a surge of litigation in various jurisdictions and also drawn the attention of competition/anti-trust regulators. Further, a lingering lack of consensus among scholars, industry experts and regulators regarding solutions and techniques that are apposite in these matters across jurisdictions has added to the confusion. This book looks at the processes adopted by the competition/anti-trust regulators to apply the principles of due process and procedural fairness in investigating abuse of dominance cases against innovators.
