Design Management Kathryn Best,2015-02-26 All designers will feel that creativity and innovation are at the heart of their designs. But for a design to have an effective and lasting impact it needs to work within certain structures, or have those structures created suitably around it. No matter how you work, a design can always be improved by assessing where it fits into the market, how it best to strengthen it before it's set in stone, who it could appeal to. It needs to be managed. In this accessible and informative second edition, Kathryn Best brings together the theory and practice of design management. With new interviews, case studies and related exercises, she provides an up to date guide for students wanting to know more about the strategy, process and implementation crucial to the management of design. The book takes its reader through the essential steps to good management of design and highlights topics currently under debate. In each part of the book Strategy, Process and Implementation are each explained using advice from leaders in the industry and real life examples. Best breaks up each part into clear and readable sections to create the perfect undergraduate book on design management.

Integrating Information Technology into the Teacher Education Curriculum Nancy Wentworth,Rodney Earle,Michael Connell,2013-01-11 As teaching evolves, teacher education must keep up. This book examines systemic reforms that incorporate new technology to improve any teacher education program. While there are books that address the integration of technology into teaching curricula, very few address the process for teacher education faculty and the systemic reform of a teacher education program. Integrating Information Technology into the Teacher Education Curriculum: Process and Products of Change provides practical examples and suggestions for teacher education departments striving to integrate new technologies into their curriculum. It will help in the effort to motivate faculty to make utilizing new technology a natural strategy for the teachers they are educating. It describes the creation of Design Teams at Brigham Young University's McKay School of Education (funded by a PT3 grant) and how these teams worked to successfully reconfigure the school's teacher preparation curricula. Integrating Information Technology into the Teacher Education Curriculum examines: how to compose and create a curriculum design team—including both teacher education and content-specific methods instructors training and collaboration opportunities that focus on the infusion of technology how to facilitate alignment among a university, cooperating school districts, the State Office of Education, and other available teacher preparation programs specific case examples of the redevelopment of teacher education courses by the instructors who teach them the process of changing a technology course required by the teacher education program the process of extending grant activities to the university's partner school districts and the State Office of Education From the editors: Preparing tomorrow's teachers to use technology in schools is a complex endeavor requiring the infusion of technology into curriculum and instructional practices at all levels of the pre-service program. In many early teacher education programs, prospective teachers took a computer literacy class separate from content methods classes and rarely engaged in real collaboration on how schoolteachers could integrate technology into authentic learning experiences. By focusing merely on how to use computers, technology training failed by not addressing how to teach students more effectively using a variety of technological tools. What teachers need to know most is how to teach content more effectively. Technology integration should cause teachers to develop different perspectives through rethinking teaching and learning. Teaching with technology causes teachers to confront their established beliefs about instruction and their traditional roles as classroom teachers.
