Mobile Media Jo Groebel, Eli M. Noam, Valerie Feldmann, 2006-08-15 The proliferation of mobile media in recent years is an international phenomenon, with billions of devices sold annually. Mobile communications are now moving beyond individualized voice to mass media content--text, voice, sound, images, and even video. This will create new types of content that allow media companies and users to interact in new ways. There is a strong interest from the media and telecom industries in what manner of applications and content can be distributed in that fashion, and at what cost. To answer these questions, the book provides 18 chapters from internationally renowned authors. They identify likely types of content such as news, entertainment, peer-to-peer, and location-specific information; evaluate the economics, business models, and payment mechanisms necessary to support these media; and cover policy dimensions such as copyright, competitiveness, and access rights for content providers. This volume takes the reader through the various elements that need to be considered in the development of third generation (3G) content, and explains pitfalls and barriers. The result is a volume of interest to business professionals, academics, and policy makers. The book is international in focus and a glossary of terms is provided. There are few publications available which give an overview of this rapidly changing field.

Economic Markets as a Means of Open Mobile-Agent Systems, 1999 Mobile-agent systems have gained popularity in use because they ease the application design process by giving software engineers greater flexibility. Although the value of any network is dependent on both the number of users and the number of sites participating in the network, there is little motivation for systems to donate resources to arbitrary agents. We propose to remedy the problem by imposing an economic market on mobile-agent systems where agents purchase resources from host sites and sell services to users and other agents. Host sites accumulate revenues, which are distributed to users to be used to launch more agents. We argue for the use of markets to regulate mobile-agent systems and discuss open issues in implementing market-based mobile-agent systems.

Japanese Telecommunications Ruth Taplin, Masako Wakui, 2006-02-01 Presenting a comprehensive survey of the telecommunications industry in Japan, Taplin and Wakui cover the different sectors of the industry - including mobile, broadband and satellite, whilst considering key questions such as the structure and economics of the industry, government policy, and international relations issues connected to the industry. The volume brings together unique analysis by renowned experts in the telecommunications field. One major overall problem is that, unlike many other industries, Japan has lagged behind other countries in telecommunications. Japanese Telecommunications considers why this should be so, showing how far this is attributable to an unmodernized industry structure, and assessing the measures being taken to address the problem. After over a decade of struggle, Japan has recorded rapid uptake of broadband, and Japanese advanced mobile services have become increasingly successful on a global scale. Japan has also undergone regulatory reform, and competition policy is now given top priority by government. Taplin and Wakui examine the most recent developments and provide signposts for the future.
