Door to Door Edward Humes, 2016-04-12 The Pulitzer Prize-winning journalist and author of *Garbology* explores the hidden and costly wonders of our buy-it-now, get-it-today world of transportation, revealing the surprising truths, mounting challenges, and logistical magic behind every trip we take and every click we make. Transportation dominates our daily existence. Thousands, even millions, of miles are embedded in everything we do and touch. We live in a door-to-door universe that works so well most Americans are scarcely aware of it. The grand ballet in which we move ourselves and our stuff is equivalent to building the Great Pyramid, the Hoover Dam, and the Empire State Building all in a day. Every day. And yet, in the one highly visible part of the transportation world—the part we drive—we suffer grinding commutes, a violent

death every fifteen minutes, a dire injury every twelve seconds, and crumbling infrastructure. Now, the way we move ourselves and our stuff is on the brink of great change, as a new mobility revolution upends the car culture that, for better and worse, built modern America. This unfolding revolution will disrupt lives and global trade, transforming our commutes, our vehicles, our cities, our jobs, and every aspect of culture, commerce, and the environment. We are, quite literally, at a fork in the road, though whether it will lead us to Carmageddon or Carmaheaven has yet to be determined. Using interviews, data and deep exploration of the hidden world of ports, traffic control centers, and the research labs defining our transportation future, acclaimed journalist Edward Humes breaks down the complex movements of humans, goods, and machines as never before, from increasingly car-less citizens to the distance UPS goes to deliver a leopard-printed phone case. Tracking one day in the life of his family in Southern California, Humes uses their commutes, traffic jams, grocery stops, and online shopping excursions as a springboard to explore the paradoxes and challenges inherent in our system. He ultimately makes clear that transportation is one of the few big things we can change—our personal choices do have a profound impact, and that fork in the road is coming up fast. Door to Door is a fascinating detective story, investigating the worldwide cast of supporting characters and technologies that have enabled us to move from here to there—past, present, and future.

Human Transit Jarrett Walker,2012-07-29 Public transit is a powerful tool for addressing a huge range of urban problems, including traffic congestion and economic development as well as climate change. But while many people support transit in the abstract, it's often hard to channel that support into good transit investments. Part of the problem is that transit debates attract many kinds of experts, who often talk past each other. Ordinary people listen to a little of this and decide that transit is impossible to figure out. Jarrett Walker believes that transit can be simple, if we focus first on the underlying geometry that all transit technologies share. In *Human Transit*, Walker supplies the basic tools, the critical questions, and the means to make smarter decisions about designing and implementing transit services. *Human Transit* explains the fundamental geometry of transit that shapes successful systems; the process for fitting technology to a particular community; and the local choices that lead to transit-friendly development. Whether you are in the field or simply a concerned citizen, here is an accessible guide to achieving successful public transit that will enrich any community.

Geography of Transportation Edward James Taaffe,1996 This overview of transport geography explores both institutional and analytical approaches to both intra- and inter-urban transport and relates them throughout with

contemporary examples. The work describes the historical development of US transportation.

Transport, Environment And Society Cahill, Michael,2010-02-01 The environmental consequences of our transport system in the shape of pollution and carbon emissions are well known. Not so clear are the social consequences of contemporary transport and mobility policy. Readers are introduced to the complexity of the relationship between transport and society together with the debates about the social inequalities produced by the transport system and the connection between social inequality, social exclusion and transport disadvantage. This book explores the social inequalities which result from the ways we travel connecting these to the key areas of social policy. Reviewing the evidence on the social impact of transport the book discusses the ways in which a sustainable transport policy could emerge.

Transit Life David Bissell,2018-03-23 An exploration of the ways that everyday life in the city is defined by commuting. We spend much of our lives in transit to and from work. Although we might dismiss our daily commute as a wearying slog, we rarely stop to think about the significance of these daily journeys. In *Transit Life*, David Bissell explores how everyday life in cities is increasingly defined by commuting. Examining the overlooked events and encounters of the commute, Bissell shows that the material experiences of our daily journeys are transforming life in our cities. The commute is a time

where some of the most pressing tensions of contemporary life play out, striking at the heart of such issues as our work-life balance; our relationships with others; our sense of place; and our understanding of who we are. Drawing on in-depth fieldwork with commuters, journalists, transit advocates, policymakers, and others in Sydney, Australia, *Transit Life* takes a holistic perspective to change how we think about commuting. Rather than arguing that transport infrastructure investment alone can solve our commuting problems, Bissell explores the more subtle but powerful forms of social change that commuting creates. He examines the complex politics of urban mobility through multiple dimensions, including the competencies that commuters develop over time; commuting dispositions and the social life of the commute; the multiple temporalities of commuting; the experience of commuting spaces, from footpath to on-ramp, both physical and digital; the voices of commuting, from private rants to drive-time radio; and the interplay of materialities, ideas, advocates, and organizations in commuting infrastructures.

Straphanger Taras Grescoe, 2012-04-24 Taras Grescoe rides the rails all over the world and makes an elegant and impassioned case for the imminent end of car culture and the coming transportation revolution I am proud to call myself a straphanger, writes Taras Grescoe. The perception of public transportation in America is often unflattering—a squalid last resort for those with one too many drunk-driving charges, too poor to afford insurance,

or too decrepit to get behind the wheel of a car. Indeed, a century of auto-centric culture and city planning has left most of the country with public transportation that is underfunded, ill maintained, and ill conceived. But as the demand for petroleum is fast outpacing the world's supply, a revolution in transportation is under way. Grescoe explores the ascendance of the straphangers—the growing number of people who rely on public transportation to go about the business of their daily lives. On a journey that takes him around the world—from New York to Moscow, Paris, Copenhagen, Tokyo, Bogotá, Phoenix, Portland, Vancouver, and Philadelphia—Grescoe profiles public transportation here and abroad, highlighting the people and ideas that may help undo the damage that car-centric planning has done to our cities and create convenient, affordable, and sustainable urban transportation—and better city living—for all.

Hop, Skip, Go: How the Transport Revolution Is Transforming Our Lives John Rossant, Stephen Baker, 2019-11-14 Urban expert John Rossant and business journalist Stephen Baker look beyond the false promises of the past to examine the real future of transportation and the repercussions for the

world's cities, the global economy, the environment, and our individual lives.

Transport Phillip Peterson,2016-09-24 Transport? Transport to where, Sir? Possibly straight to hell. Who will live? Who will die? An alien object is discovered off the coast of California; a sphere that transports people to other solar systems. Death-row inmate Russell Harris and nine other convicts are given the chance to save their own lives by agreeing to travel as test subjects on the transporter. But when the first volunteer dies a gruesome death, it becomes clear to Russell and his comrades that the venture is little more than a merciless death mission on which they will all perish. Their only chance of survival is to uncover the secret of the mysterious object, but that too seems hopeless - because no trace of the transporter's constructors can be found.

Reasons Future Global Public Transport Services Johnny Ch LOK,2021-06-07 Future Human Transport Need Change How future our transport need change? What factors influence our future transport need change? In general, these factors may influence our transportation need change. They may include fuel cost, the labor market for commercial drivers, demand for freight , customer loyalty , vehicle capacity, government regulation, geographical events, the public transport tool reputation to passengers as a merchant. However, the factors that influence the development of transport system in an area? They may

include as below: Environment at the local scale existing hydrographical and geomorphological characteristics are string, factors in transport development, particularly in terms of the technical challenges (bridge, gradients,) they present to construct, other factors may include historical, technological, political and economic factors. All of these factors may influence our future transport system how develops. For railway development influential factors, they may include: Geograohical factors, e.g. the North Indian plain with its level land, high density of population and rich agriculture presents the most favourable conditions for the development of railways in India. However, the presence of large number of rivers makes it necessary to construct bridges which involve heavy expenditure to Indian Government publich transport expenditure. How transport has changed from past to present? There has been a remarkable development in modern transportation. The stream engine and then the stream trains have emerged and spread at this time and in abundance until the discovery of natural gas and oil was an evolution of transportation. Thus, the sedams and vehicles began to run in oil, until present battery changes energy vehicle need, even future non-manual driving artificial intelligent driving vehicle need. These new transport technology may influence our future public transportation from gas energy to battery changed energy, even non-manual driving vehicles need to our daily transport need. So, our future purpose of public transport need is the unique purpose to oversome space, which is shaped by a variety of human

and physical constraints, such as distance, time. These both is our future main public transport need main purpose factors, short distance and reducing journey time, they influence that why we need to choose to catch any kinds of public transportation tool to replace purchase private cars to drive transport tool choice. So, future any kinds of public transport tools, they need to consider above both main factors , how to attract passengers to choose to catch themselves public transport tools choice in this competitive public transport tools market. On the other hand, the economic importance of transportation development can be defined as improving the welfare of a society, through appropriate social, political and economic conditions , such as US Government spent too much money to assist MTR (MAss transport railway firm) to develop underground thrain transport. Its aim to let many passegner can reduce journey time and reduce distance between destinations, it also hopes US citizen passengers can pay cheap transport fare to buy ticket to catch underground transport train for many families their transport expenditure in social transport welfare view.

Transportation Strategies for the 21st Century Thomas D. Larson,1991

Gridlock Nation Kwasi Kwarteng,2011-10-31 Why do we spend so much time stuck in traffic? After Peak Oil, do we face the prospect of Peak Travel? Does climate change mean no more foreign holidays? In Victorian times, Britain used to have the finest transport system in the world. Today, the future seems to belong to China with its ever growing High Speed Rail

networks or Dubai and its titanic new five runway airport. What went wrong? For the last hundred years, the planners at the centre of our transport system have told us what roads, railways or airports we can use. Now, to save the planet they tell us to give up our cars and planes. If we break away from the planners' control, we can have roads that run freely and trains that arrive on time. Climate change can be tackled without giving up air travel. Riding a train should be as reliable as picking up bread from your local shop. Gridlock Nation looks at the timeless problems faced in transport, from traffic jams in Rome to Victorian road rage. It examines the potential of dazzling innovations across the world, from the private sector space revolution to Google's new driverless cars. Britain needs a new revolution in transport - or gridlock will soon bring the country to a halt.
