A Dog Called Perth Peter Martin, 2014-03-04 This heartwarming story of a truly remarkable dog, who changed the lives of her owners forever, will move and delight dog lovers everywhere. From the moment Peter and Cindy Martin spotted her as a puppy in a kennel she came streaking toward them and staring with her intense gaze, they knew she was the one. Almost immediately, she became a central part of their household. Always left to run free, she became indefatigable explorer, gone for hours, sometimes entire days, but her infallible compass always brought her home. From her exploits in upstate New York to the story of her incredible survival in the Vermont wilderness and her later adventures in the English countryside, Perth displayed the same pluck, intelligence, devotion, unshakable trust, and unstinting love. Anyone who has ever owned or grown up with or wanted a dog will be captivated by this extraordinary, beautifully written homage to a very special creature.

Radar Days E G. Bowen, 2022-02-24 It is now more than sixty years since radar began in Britain. In the intervening years, airborne radar has become one of the most important branches of civilian and military radar. In *Radar Days*, the father of airborne radar, Dr. Taffy Bowen recounts his personal story of how the first airborne radars were built and brought into use in the Royal Air Force, and of the Tizard mission to the USA in 1940, of which he was a member. Written from the point of view of the individuals who worked at the laboratory bench, the story begins with the building of the first ground air-warning radar at Orfordness in June 1935. The book proceeds to describe how this equipment was miniaturized to make it suitable for use in aircraft and the lengthy, sometimes hazardous flight trials conducted before radar went into service with the

RAF. The author also details the activities of the Tizard mission, which was instrumental in installing the first airborne radars in US aircraft. The greatest achievement of the mission was to pass on the secret of the resonant magnetron to the US only a few months after its invention at Birmingham University. This was the device that brought about a revolution in Allied radar, putting it far ahead of the corresponding German technology for the remainder of the war.

Crash Dive Larry Bond,2010-04-13 They are the ultimate unseen deterrent in modern warfare. Thousands of tons of steel, missiles, torpedoes, and men, lurking silently hundreds of feet underwater, able to lie off any coastline and unleash a devastating hail of destruction with pinpoint accuracy. They are the true masters of the oceans, bringing hostile military sea traffic to a standstill, striking swift and unseen, and slipping away in an instant, ready to do it all over again at a moment's notice. Edited by best-selling author Larry Bond, *Crash Dive* collects the best non-fiction excerpts about the mighty submarines and the crews that man them. From the tough Gato-class boats that harassed the Japanese Navy during World War II to the cat-and-mouse games played by U.S. and Soviet submarines during the Cold War, *Crash Dive* will take you inside the silent but deadly world of the military submarine. Concealed Dan W. Roberts,2015-09-18 “Concealed” is a mystery thrill ride that takes the reader through the events that enable a commercial pilot to formulate a plan for revenge against the United States. His plot takes advantage of radar limitations over desolate stretches of ocean, combined with other detection constraints that can render an airplane nearly invisible. Those intentions soon capture the interest of terrorist organizations that realize the potential to not only conceal an airplane’s true identity but turn it into a weapon of mass destruction on a scale never thought possible.

The Fearless Flier's Handbook Debbie Seaman,1998-09-01 As many as one in five people is afraid of flying. For some, the fear is so paralyzing that they have never boarded a plane. For others, flying is a necessary evil-they'll do it because they have to, but it's torture. They white-knuckle their way through the flights they have to take or avoid air travel and miss out on promotions, business opportunities, and the thrill of visiting new places with friends and family. This book provides a sensible, tested alternative, with proven strategies that have helped hundreds of people overcome their fears and head happily skyward.Based on the Australian airline Qantas's world-renowned Fearless Fliers course, THE FEARLESS FLIER'S

HANDBOOK is filled with soothing facts and step-by-step exercises for turning fear into calm and confidence.

Attitude or Latitude? Graham R.

Braithwaite, 2017-03-02 Australia has an enviable record for airline safety - No one has ever died in an accident involving a commercial jet aircraft in Australia. The reasons behind this have been the source of much speculation and theories tend to focus on issues related to the natural environment and even luck. However, with human error being present in arguably 100% of aircraft accidents, it seems reasonable that a good safety record is at least partly the consequence of human intervention. This text uses Australian aviation as a case study of a safe system to explore the interactions between the natural, operational and human environments. Based on doctoral research including a major survey of pilot and air traffic controller perceptions, the book is unusual in that it looks at positive examples in safety rather than taking the traditional reactive approach to safety deficiencies.

Call of the Kyeema Doug Whitfield, 2002 Describes with personal experiences, the rise of commercial aviation controls and support services- the Aeradio system of communications, control and beacons, air traffic control, flight checking and briefing at local and national levels through his work as an Flight Service Officer of the Department of Civil Aviation in Australia. These systems have been superseded in the 21st century, much to the author's regret, by remote management and computer control.
