Construction Site Planning and Logistical Operations Randy R. Rapp,Bradley L. Benhart,2015 Organising and administering a construction site so that the right resources get to the right place in a timely fashion demands strong leadership and a rigorous process. Good logistical operations are essential to profitability, and this book is the essential, muddy boots guide to efficient site management. Written by experienced educator-practitioners from the world-leading Building Construction Management programme at Purdue University, this volume is the ultimate guide to the knowledge, skills, and abilities that need to be mastered by project superintendents. Observations about leadership imperatives and techniques are included. Organisationally, the book follows site-related activities from bidding to project closeout. Beyond outlining broad project managerial practices, the authors drill into operational issues such as temporary soils and drainage structures, common equipment, and logistics. The content is primarily geared for the manager of a domestic or small commercial building construction project, but includes some reference to public and international work, where techniques, practices, and decision making can be substantially different. The book is structured into five sections and fifteen chapters. This facilitates ready adaptation either to industry training seminars or to university courses: Section I. The Project and Site Pre-Planning: The Construction Project and Site Environment (Randy Rapp); Due Diligence (Robert Cox); Site Organization and Layout (James O'Connor). Section II. The Site and Field Engineering Issues: Building Layout (Douglas Keith); Soil and Drainage Issues (Yi Jiang and Randy Rapp). Section III. Site Logistics: Site Logistical Procedures and Administration (Daphene Koch); Earthmoving (Douglas Keith); Material Handling Equipment (Bryan Hubbard). Section IV. Leadership and Control: Leadership and Communication (Bradley Benhart); Health, Safety, Environment (HSE), and Security (Jeffrey Lew); Project Scheduling (James Jenkins); Project Site Controls (Joseph Orczyk); Inspection and QA/QC (James Jenkins). Section V. Planning for Completion: Site-Related Contract Claims (Joseph Orczyk); Project Closeout (Randy Rapp).

Site Characterization in Karst and Pseudokarst Terraines Richard C. Benson,Lynn B. Yuhr,2015-09-24 This book provides a practical strategy for obtaining a more complete and accurate geologic site characterization. The strategy and methods to characterize complex geologic settings are readily available. The strategy utilizes readily available technology, basic science and good, old-fashioned common sense resulting in a solid understanding of geologic and even karst or pseudokarst conditions. We provide an introduction to many off-the-shelf methods available for site characterization as well as examples of their application throughout the book. The purpose of a geologic site characterization is to understand the 3-dimensional geologic framework, along with the engineering and hydrologic properties of a site including any man-made impacts. A well-done site characterization is the cornerstone of all geotechnical, groundwater and environmental projects. The geologic conditions, particularly karst conditions, can significantly impact a site including its structural stability, groundwater pathways and potential for rapid transport or traps for contaminants. Once we have adequately characterized the geologic conditions can we carry our remediation, design and construction, model flow, and make risk assessments that are accurate and reliable.

The Rules of Photography and When to Break Them Haje Jan Kamps,2013-09-26 One of the most popular cameras on the market is called the Digital Rebel, yet many photographers use it and its brethren following tired old rules from tired old photographers. If you're just starting out with a camera, or are starting to think about switching away from auto, this is the perfect book for you. Not only will you find within all the classical rules-useful basic knowledge that can sharpen anyone's eye for great photography-but you'll simultaneously be shown how you can push the boundaries that many teachers erroneously set, filling your memory card with exciting, different pictures every time. This book brings the aspirational photography seen by so many in books or on Flickr within reach of everyone.

Project Planning and Project Success Pedro Serrador,2014-11-24 Project planning is generally accepted as an important contributor to project success. However, is there research that affirms the positive impact of project planning and gives guidance on how much effort should be spent on planning? To answer these questions, this book looks at current literature and new research of this under-studied area of project management. The author presents his findings from an extensive review of project planning literature that covers more than 270 sources. He also discusses new research that analyzes data from more than 1,300 global projects. The book confirms that the time spent on planning activities reduces risk and significantly increases the chances of project success. It also concludes that there can be too much planning and shows that the optimum ratio of planning to effort is 25%. The book examines the impact of project planning on different industries. It discusses research in the construction and information technology (IT) industries, and presents a case study of how to plan and track a software development project. The book also looks at the impact of geography on project planning and success. Intended as a basic tool in the library of any project manager or general manager, this book brings to light project planning techniques and information that have never been published previously. It is an important resource on how to plan projects properly and propel your career forward.

The Routledge Companion to Rural Planning Mark Scott,Nick Gallent,Menelaos Gkartzios,2019-01-28 The Routledge Companion to Rural Planning provides a critical account and state of the art review of rural planning in the early years of the twenty-first century. Looking across different international experiences - from Europe, North America and Australasia to the transition and emerging economies, including BRIC and former communist states - it aims to develop new conceptual propositions and theoretical insights, supported by detailed case studies and reviews of available data. The Companion gives coverage to emerging topics in the field and seeks to position rural planning in the broader context of global challenges: climate change, the loss of biodiversity, food and energy security, and low carbon futures. It also looks at old, established questions in new ways: at social and spatial justice, place shaping, economic development, and environmental and landscape management. Planning in the twenty-first century must grapple not only with the challenges presented by cities and urban concentration, but also grasp the opportunities - and understand the risks - arising from rural change and restructuring. Rural areas are diverse and dynamic. This Companion attempts to capture and analyse at least some of this diversity, fostering a dialogue on likely and possible rural futures between a global community of rural planning researchers. Primarily intended for scholars and graduate students across a range of disciplines, such as planning, rural geography, rural sociology, agricultural studies, development studies, environmental studies and countryside management, this book will prove to be an invaluable and up-to-date resource.
