Simulation Games and Learning in Production Management Jens O. Riis,2016-01-09 Over the last few years, games of different types have been successfully used in the teaching of production management and in the introduction of new planning methods and systems in industrial enterprises. Games have been used to explain the dynamic nature of production management and for testing new planning principles. Company-specific games have recently been involved as part of developing new production management systems.

Hands-on Project Management Avraham Shtub,Moshe Rosenwein,2017-12-28 Teaching project management is not an easy task. Part of the difficulty is the one-of-a-kind nature of projects. This book and the software that comes with it (Project Team Builder) present a unique approach to the teaching and training of project management — an approach based on a software tool that combines an interactive, dynamic case study and a simple yet effective Project Management System. The book focuses on problems that the project manager faces in planning, monitoring and controlling projects. Together with the software, the book provides the user with the opportunity to experience complex Project Management situations, understand the situation, develop alternative ways to cope with it and select the best alternative based on rigorous analysis. Project Team Builder (PTB), the software that accompanies this book, is web-based, please visit <http://www.sandboxmodel.com>.

Games in Operations Management Jens O. Riis,Riitta Smeds,Rik Van Landeghem,2013-04-17 Learning has become a constant state of mind for most professionals in today's organizations. However, to become a true learning enterprise, organizations cannot stop at instilling this yearning for knowledge into their collaborators. They must also capture and formalize the common know-

how of the organization, as well as provide time and infrastructure to allow learning moments to happen. The aim of the Gaming Workgroup within IFIP 5.7 on Integrated Production Management Systems and the European Group of University Teachers for Industrial Management EHTB is to develop tools and formalisms to support experimental learning in these organizations. It has been proven that modelling the know-how, using visual environments such as multimedia and graphic simulations, is a first step. This in turn allows for the development of games, i.e. challenging settings that foster group interaction and problem solving. Games in Operations Management provides an excellent overview of the different game formats that have been developed and tested in past years, and includes games in a manufacturing environment, games in a services environment, and games for teaching organizational values. The book comprises the selected, revised proceedings of the 4th International Workshop on Games in Production Management: Experimental Learning in Industrial Management, which was sponsored by the International Federation for Information Processing (IFIP) and held in November, 1998, in Ghent, Belgium. The book will be of particular interest to organizational trainers, providing a good overview of state-of-the-art game and training formats as well as hints and advice on how to organize interactive training sessions. It will also be of interest to researchers in industrial engineering, industrial management, and operations management.

Project Management with Dynamic Scheduling Mario Vanhoucke, 2013-11-29 The topic of this book is known as dynamic scheduling, and is used to refer to three dimensions of project management and scheduling: the construction of a baseline schedule and the analysis of a project schedule's risk as preparation of the project control phase during project progress. This dynamic scheduling point of view implicitly assumes that the usability of a project's baseline schedule is rather limited and only acts as a point of reference in the project life cycle. Consequently, a project schedule should especially be considered as nothing more than a predictive model that can be used for resource efficiency calculations, time and cost risk analyses, project tracking and performance measurement, and so on. In this book, the three dimensions of dynamic scheduling are highlighted in detail and are based on and inspired by a combination of academic research studies at Ghent University (www.ugent.be), in-company trainings at Vlerick Business School (www.vlerick.com) and consultancy projects at OR-AS (www.or-as.be). First, the construction of a project baseline schedule is a central theme throughout the various chapters of the book, and is discussed from a complexity point of view with and without the presence of project resources. Second, the creation of an awareness of the weak parts in a baseline schedule is discussed at the end of the two baseline scheduling parts as schedule risk analysis techniques that can be applied on top of the baseline schedule. Third, the baseline schedule and its risk analyses can be used as guidelines during the project control step where actual deviations can be corrected within the margins of the project's time and cost reserves. The second edition of this book has seen corrections, additions and amendments in detail throughout the book. Moreover Chapter 15 on Dynamic Scheduling with ProTrack has been completely rewritten and extended with a section on ProTrack as a research tool.

Project Management Simulation with PTB Project Team Builder Avraham Shtub, 2012-03-29 "The Project Team Builder (PTB) meets the need for an effective teaching and training tool of project management. The software introduces the user to the full dynamics of project planning, monitoring and control, moving scenario-wise from the easy, fundamental issues to the more involved, complex ones. Based on a sound conceptual foundation, it provides the ideal individual and team training support for bringing projects to completion effectively and efficiently in a dynamic stochastic environment. Highly recommended" Willy Herroelen, Emeritus Professor of Operations Management, Katholieke Universiteit Leuven "The Engineering Project Management School of the Israeli Electric Company (IEC) used the Project Team Builder simulator developed at the Technion. Using PTB, it was possible to practice risk management when uncertainty is presented in resources availability, duration of activities and cash flow. The challenges presented to the students increased motivation. The quality of the learning process, as well as the end results, was excellent." Sergio Klik, Director, Engineering Project Management School, The Israeli Electric Company "PTB takes an important step in the right direction. It employs simulation in order to put the student in the real situation where he has to plan and execute projects by handling all issues at once. In particular, it puts the student in a situation where his project is exposed to risk. By this, the student has to combine the isolated and simplified views on projects, and he learns that risk can materialize and that he has to plan and execute the project accordingly. This is a very important aspect of project management which is learnt by doing (and failing) and which has not been delivered this way before." Rainer Kolisch, Professor of Operations Management, TUM School of Management, Technische Universität München A video tutorial of the Project Team Builder (PTB) simulator is available at the following link: <http://www.sandboxmodel.com/videos-1> The tutorial presents the PTB version that comes with the book and

demonstrates the use of PTB for training and for teaching.
