Animal Breeding, Welfare and Society Jacky Turner,2010-08-12 The determination of when, how, how often and with whom an animal breeds has moved away from evolutionary pressures towards our own purposes: these include the breeding and use of around 50 billion mammals and birds for food production annually, the breeding of pedigree dogs, cats, racing dogs and horses, specialized laboratory animal strains and the use of reproductive science to breed endangered species in zoos and to attempt to limit unwanted populations of pests and non-native species. This book discusses the methods, the motivations and the consequences of human intervention in animal breeding in terms of what we know about animal behavior and well-being. It sets out to challenge both our practice and our assumptions- those of society as a whole and the many professionals involved in the worldwide animal reproduction business. It explores where we are now and proposes a future where we have more respect for animals as sentient beings and have loosened the reins of reproductive control.

Mismatch Ronald Giphart,Mark van Vugt,2018-02-15 Our brains evolved to solve the survival problems of our Stone Age ancestors, so when faced with modern day situations that are less extreme, they often encounter a mismatch. Our primitive brains put us on the wrong foot by responding to stimuli that - in prehistoric times - would have prompted behaviour that was beneficial. If you've ever felt an anxious fight or flight response to a presenting at a board meeting, equivalent to facing imminent death by sabre-toothed tiger, then you have experienced a mismatch. Mismatch is about the clash between our biology and our culture. It is about the dramatic contrast between the first few million years of human history - when humans lived as hunters and gatherers in small-scale societies - and the past twelve thousand years following the agricultural revolution which have led us to comfortable lives in a very different social structure. Has this rapid transition been good for us? How do we, using our primitive minds, try to survive in a modern information society that radically changes every ten years or so? Ronald Giphart and Mark van Vugt show that humans have changed their environment so drastically that the chances for mismatch have significantly increased, and these conflicts can have profound consequences. Reviewed through mismatch glasses, social, societal, and technological trends can be better understood, ranging from the popularity of Facebook and internet porn, to the desire for cosmetic surgery, to our attitudes towards refugees. Mismatches can also affect our physical and psychological well-being, in terms

of our attitudes to happiness, physical exercise, choosing good leaders, or finding ways to feel better at home or work. Finally, Mismatch gives us an insight into politics and policy which could enable governments, institutions and businesses to create an environment better suited to human nature, its potential and its constraints. This book is about converting mismatches into matches. The better your life is matched to how your mind operates, the greater your chances of leading a happy, healthy and productive life.

It also provides fresh chapters on the history of nuclear cardiology imaging, radionuclide handling techniques and radiation safety, PET-based myocardial perfusion imaging, and vascular imaging. The entire field is presented in pictographic form that is visually pleasing and conforming to current trends of medical education. The fifth edition of the Atlas of Nuclear Cardiology is an essential reference for cardiologists, radiologists, and nuclear medicine physicians interested in the latest approaches to noninvasive diagnostic cardiovascular nuclear imaging techniques. It also serves as a ready reference textbook for medical students and residents as well as nuclear physicists, nuclear medicine technologists, and radiopharmacists.

Working Dogs: Form and Function, 2nd Edition Cynthia M. Otto, Erik Wilsson, Mia Cobb, 2020-03-27 Dogs partner with humans in a wide array of work-related disciplines. As detectors, guides, guardians, stock herders, assistants and professional canine athletes, there is demand for more scientific knowledge to enhance the performance and success of human and working dog partnerships. This topic encompasses a holistic approach to the science of working dog performance. The ability of a dog to complete tasks depends on their physical and behavioral traits; their ability to exert themselves at various demanding tasks requires both physical and behavioral stamina, agility, and resilience. The influence and interactions of genetics, health, environment and training are areas that can provide new insight to improve performance in current dogs and future generations. The human impact on the success of the working dog team encompasses the human's physical, psychological and analytic perspectives, and the intersection of human and canine interspecies communication.
