Flying Off Course Rigas Doganis,2009-12-18 The airline industry presents an enigma. High growth rates in recent decades have produced only marginal profitability. This book sets out to explain, in clear and simple terms, why this should be so. It provides a unique insight into the economics and marketing of international airlines. Flying Off Course has established itself over the years as the indispensable guide to the inner workings of this exciting industry. This enlarged fourth edition, largely re-written and completely updated, takes into account the sweeping changes which have affected airlines in recent years. It includes much new material on many key topics such as airline costs, 'open skies', air cargo economics, charters and new trends in airline pricing. It also contains two exciting new chapters on the economics of the low-cost no frills carriers and on the future prospects of the industry. The book provides a practical insight into key aspects of airline operations, planning and marketing within the conceptual framework of economics. It is given added force by the author's hands-on former experiences as a Chairman and CEO of Olympic Airways and as a non-executive Director of South African Airways while he is currently a non-executive Director of easyJet.

**Minding the Weather** Robert R. Hoffman, Daphne S. Ladue, H. Michael Mogil, Paul J. Roebber, J. Gregory Trafton, 2017-08-11 A detailed study of research on the psychology of expertise in weather forecasting, drawing on findings in cognitive science, meteorology, and computer science. This book argues that the human cognition system is the least understood, yet probably most important, component of forecasting accuracy. Minding the Weather investigates how people acquire massive and highly organized knowledge and develop the reasoning skills and strategies that enable them to achieve the highest levels of performance. The authors consider such topics as the forecasting workplace; atmospheric scientists' descriptions of their reasoning strategies; the nature of expertise; forecaster knowledge, perceptual skills, and reasoning; and expert systems designed to imitate forecaster reasoning. Drawing on research in cognitive science, meteorology, and computer science, the authors argue that forecasting involves an interdependence of humans and technologies. Human expertise will always be necessary.

**Inventory and Supply Chain Management with Forecast Updates** Suresh P. Sethi, Houmin Yan, Hanqin Zhang, 2006-03-30 Real problems are formulated into tractable mathematical models, which allow for an analysis of various approaches. Attention is focused on solutions. **Intelligent Internal Control and Risk Management** Mr Matthew Leitch, 2012-09-28 Many people in organizations resent internal control and risk management; these two processes representing unwelcome tasks to be completed for the benefit of auditors and regulators. Over the last few years this perception has been heightened by the disastrous implementation of section 404 of the Sarbanes-Oxley Act of 2002, which is generally regarded as having been too expensive for the benefits it has brought. This important book offers a way of improving this prevailing perception and increasing the value of control and risk management by bringing creativity and design skills to the fore. The value of risk and control activities is often limited by the value of the control ideas available and so Matthew Leitch provides an arsenal of 60 high performance control mechanisms. These include several alternative ways to design controls and control systems, as well as providing controls for monitoring and audit, controls for accelerated learning, and techniques for finding and recovering cash. This design material is combined with insights into the psychology of risk control, strategies for encouraging helpful behaviour and enabling change, and a surprisingly simple integration of internal control with risk management. The book is realistic, practical, original, and easier reading than most in the field. The material is not specific to any one country and has international appeal for internal auditors and all those concerned with risk management, corporate governance and security.

**Spatio-Temporal Statistics with R** Christopher K. Winkle, Andrew Zammit-Mangion, Noel Cressie, 2019-02-18 The world is becoming increasingly complex, with larger quantities of data available to be analyzed. It so happens that much of these big data that are available are spatio-temporal in nature, meaning that they can be indexed by their spatial locations and time stamps. Spatio-Temporal Statistics with R provides an accessible introduction to statistical analysis of spatio-temporal data, with hands-on applications of the statistical methods using R Labs found at the end of each chapter. The book: Gives a step-by-step approach to analyzing spatio-temporal data, starting with visualization, then statistical modelling, with an emphasis on hierarchical statistical models and basis function expansions, and finishing with model evaluation Provides a gradual entry to the methodological aspects of spatio-temporal statistics Provides broad coverage of using R as well as R Tips throughout. Features detailed examples and applications in end-of-chapter Labs Features Technical Notes throughout to provide additional technical detail where relevant Supplemented by a website featuring the associated R package, data, reviews, errata, a discussion forum, and more The book fills a void in the literature and available software, providing a bridge for students and researchers alike who wish to learn the basics of spatio-temporal statistics. It is written in an informal style and functions as a down-to-earth introduction to the subject. Any reader familiar with calculus-based probability and statistics, and who is comfortable with basic matrix-algebra representations of statistical models, would find this book easy to follow. The goal is to give as many people as possible the tools and confidence to analyze spatio-temporal data.
