Password Generator for Ten-Sided Dice www.passwordgeneratordice.com, 2018-04-02 To generate a password using this password generator for ten-sided dice, you need two ten-sided dice: one labeled 0 to 9, and the other labeled 00 to 90. Roll the dice and add the numbers together. Turn to that page. On that page there are a hundred nouns numbered from 0 to 99. Roll the dice again and add the numbers together to see which of those nouns you will include in your password. For example, if you roll a 2 and a 10 on your first roll, you would turn to page 12. Then if you roll an 8 and a 40, you would include the noun numbered 48, Software. If you include only one noun in your password, there is a 1 in 10 thousand chance that it will be guessed on the first try. This is inadequate for most security applications. So, repeat the process in the previous paragraph to get at least three more nouns to include in your password. Continuing the previous example, your password might be SoftwareBucketStarAnthropology. With four nouns, there is only a 1 in 10 quadrillion chance that it will be guessed on the first try.

Macromedia ColdFusion MX Development Eric Ladd, 2002 Macromedia's ColdFusion is a popular choice for making dynamic Web pages coupled to easy-to-maintain databases. From his teaching experience, the author has found that students learn best by seeing several sample CF scripts and the output those scripts produce. The author offers lots of example code that is well-commented, is discussed thoroughly prior to its introduction, and is associated with a screen capture that shows the code's output.

Master logins: In 1Password, a typical login contains a set of credentials used to sign in to a Web site. Find out how to create logins, sort them, search them, tag them, and more. You'll especially find help with editing logins. For example, if you change a site's password from dragon7 to eatsevendragonsforlunchatyahoo, you'll want to incorporate that into its login. Or, use 1Password's password generator to create highly secure random passwords, like dGx7Crve3WucELF#s.

Understand password security: Get guidance on what makes for a good password, and read Joe's important Password Dos and Don'ts. A special topic covers how to perform a security audit in order to improve poor passwords quickly.

Go beyond Web logins: A primary point of 1Password is to speed up Web logins, but 1Password can also store and autofill contact information (for more than one identity, even), along with credit card information. You'll also find advice on storing passwords for password-protected files and encrypted disk images, plus ideas for keeping track of confidential files, scans of important cards or documents, and more.

Sync your passwords: Discover which 1Password syncing solution is right for you: Dropbox, iCloud, or a Finder folder, as well as a device-to-device Wi-Fi sync.

Share your passwords: Learn how 1Password integrates with the 1Password for Teams online service for sharing passwords within groups, such as your family or company work group. You'll also discover the answers to key questions, including: Should I use my Web browser's autofill feature? What about iCloud Keychain? Should I use that too? What can I do quickly to get better password security? Should I buy 1Password from AgileBits or the Mac App Store? How can I find and update weak passwords I created long ago? What's the best way to work with the password generator? What should I do about security questions, like the name of my pet? How can 1Password provide a time-based one-time password (TOTP)? How can I access my 1Password data on another person's computer? How do I initiate 1Password logins from utilities like LaunchBar?

How to create a super crazy massive python projects Samarth Goyal, 2022-05-30 We present to you Moto, a smart, multi-functional virtual assistant that can easily be customized to cater the needs of the user, helping them multitask and get things done. As an exemplification if you're a software developer or a new to coding, Project Zenith can act as your coding assistant like it can create classes or functions for you at your command. It can also open basic coding related apps or websites like PyCharm, stack overflow, vs code etc and if that's not enough our voice assistant can lighten up your mood with some programming jokes. Apart from these developer specific features our voice assistant can perform a wide variety of tasks from various domains. Be it some general tasks like automating emails and WhatsApp or fun feature like horror pranks and even checking you and your partner's compatibility on Love Calculator. Jokes aside, Moto also has some real-life applications which are very relevant in today's times like Face Mask detection using TensorFlow and Facial Recognition. Our bot can do all the redundant and monotonous tasks like searching for topic on the internet, typing emails, writing boilerplate code, browsing multiple websites etc along with a set of many super-fluon's

tasks, that consume the user's precious time, that otherwise could be utilized in doing some productive work. Along with several usual features found in most of the voice assistants in the market, our assistant has certain unique and state-of-the-art features like face recognition, human mood recognition, facemask-recognition, coding-helper, social-media automation, shopping automation, Messaging and Music Automation etc, that make our project in competition with the other commercial products in the market. Some downfalls of our project include, slight increase in the latency of speech recognition and also errors in the precision of the recognised speech. In conclusion, Project Zenith is still in need of a few improvements and since the project is based on open-source architecture, we expect that these issues will be resolved soon in the future.

Supporting Users in Password Authentication with Persuasive Design Tobias Seitz,2018-08-03 Activities like text-editing, watching movies, or managing personal finances are all accomplished with web-based solutions nowadays. The providers need to ensure security and privacy of user data. To that end, passwords are still the most common authentication method on the web. They are inexpensive and easy to implement. Users are largely accustomed to this kind of authentication but passwords represent a considerable nuisance, because they are tedious to create, remember, and maintain. In many cases, usability issues turn into security problems, because users try to work around the challenges and create easily predictable credentials. Often, they reuse their passwords for many purposes, which aggravates the risk of identity theft. There have been numerous attempts to remove the root of the problem and replace passwords, e.g., through biometrics. However, no other authentication strategy can fully replace them, so passwords will probably stay a go-to authentication method for the foreseeable future. Researchers and practitioners have thus aimed to improve users' situation in various ways. There are two main lines of research on helping users create both usable and secure passwords. On the one hand, password policies have a notable impact on password practices, because they enforce certain characteristics. However, enforcement reduces users' autonomy and often causes frustration if the requirements are poorly communicated or overly complex. On the other hand, user-centered designs have been proposed: Assistance and persuasion are typically more user-friendly but their influence is often limited. In this thesis, we explore potential reasons for the inefficacy of certain persuasion strategies. From the gained knowledge, we derive novel persuasive design elements to support users in password authentication. The exploration of contextual factors in password practices is based on four projects that reveal both psychological aspects and real-world constraints. Here, we investigate how mental models of password strength and password managers can provide important pointers towards the design of persuasive interventions. Moreover, the associations between personality traits and password practices are evaluated in three user studies. A meticulous audit of real-world password policies shows the constraints for selection and reuse practices. Based on the review of context factors, we then extend the design space of persuasive password support with three projects. We first depict the explicit and implicit user needs in password support. Second, we craft and evaluate a choice architecture that illustrates how a phenomenon from marketing psychology can provide new insights into the design of nudging strategies. Third, we tried to empower users to create memorable passwords with emojis. The results show the challenges and potentials of emoji-passwords on different platforms. Finally, the thesis presents a framework for the persuasive design of password support. It aims to structure the required activities during the entire process. This enables researchers and practitioners to craft novel systems that go beyond traditional paradigms, which is illustrated by a design exercise.
