Move Better, Eat Smarter, Live Happier Joseph A. Meier, 2018-01-08 What can we really control throughout our lifetime that may have an impact on our health? The answer, to an extent, is: a lot. We can shape our environment to better deal with roadblocks. We can control how and how much we move. We can control what we choose to put into our mouths. We can choose the attitude and outlook we take with us each day. We can choose to let motivation elude us, or figure out new ways to regain it. We can choose who we spend most of our time with and the influence those people have on the decisions we make – with or without them around. Many people feel helpless when it comes to balancing these factors. It doesn't have to be difficult for it to last. It just has to be done in small, manageable steps. Learn, apply, evaluate, and adjust. MOVE Better EAT Smarter LIVE Happier Joseph A. Meier

The Hunger Diaries, or Andrew Mackay, 2019-07-19 Weight! He lost 17 lbs of it in fifteen days? Yes, he did -- and you can, too. Amazon best-selling author (and overweight yo-yo dieter) Andrew Mackay existed on fast food, processed meals, and gallons of soda. In between snacks, he made the mistake of checking his Body Mass Index... The Result? OBESE! Something inside this math-hating, science-shunning, exercise-averse author snapped – and it wasn't his stomach sleeve (because he didn't need one – yet!) Devastated by the news, Mackay cooked up a plan to lose weight. To help, he kept a diary. Halfway through the adventure he stumbled across the only way to shed the pounds, and unearthed dozens of benefits for everyone to use: • The correct way to lose weight – and why it works. • The wrong way to lose weight – and why it never works. • How to start, what to do, and the pros/cons to watch out for. • Simplified explanations for the math and science even a two-year-old can understand. • Mackay's astonishing FOOL YOURSELF method to smash all obstacles in your path to success. No one said it was going to be easy. But... no one said it couldn't be an insightful, snarky and hilarious document of one man's weight loss triumph - or: a non-fiction Bridget Jones's Diary meets all those Lose Weight Real Quick books you dumped in the trash because they didn't work. Dietary reference values for energy Scientific Advisory Committee on Nutrition, 2012-05-02 Dietary reference values (DRVs) for energy are based on estimating the total energy expenditure (TEE) for groups of people. TEE provides a measure of the energy requirement at energy balance i.e. when energy intake matches energy expenditure. The methodology to measure TEE - the doubly labelled water (DLW) method - has advanced and as a result, the evidence base on TEE in a wide variety of population groups has expanded considerably. With the high levels of overweight and obesity currently seen in the UK and the wealth of new data now available, it was considered timely for the Scientific Advisory Committee on Nutrition (SACN) to review recommendations for the UK population. This report details the evidence and approaches SACN have considered in order to update the DRVs for energy. SACN chose a prescriptive approach to estimating energy reference values; suitable reference body weight ranges consistent with long-term good health were used to calculate energy reference values. Thus, basal metabolic rate (BMR) values were predicted using healthy reference body weights. Using this approach, if overweight groups consume the amount of energy recommended for healthy weight groups, they are likely to lose weight, whereas underweight sections of the population should gain weight towards the healthy body weight range. SACN has derived new energy reference values. For most population groups, except for infants and young children, the values have increased. DRVs should be used to assess the energy requirements for large groups of people and populations, but should not be applied to individuals due to the large variation in physical activity and energy expenditure observed between people.
