Organic Agriculture, Environment and Food Security Nadia Scialabba,Caroline Hattam,2002 Organic agriculture is defined as an environmentally and socially sensitive food supply system. This publication considers the contribution of organic agriculture to ecological health, international markets and local food security. It contains a number of case studies of the practical experiences of small farmers throughout the world (including India, Iran, Thailand, Uganda and Brazil) who have adopted fully integrated food systems, and analyses the prospects for a wider adoption of organic agriculture. The book also discusses the weakness of institutional support for nurturing existing knowledge and exchange in organic agriculture.

Special Report - FAO/WFP Crop and Food Security Assessment Mission (CFSAM) to the Democratic Socialist Republic of Sri Lanka Food and Agriculture Organization of the United Nations,World Food Program,2022-09-12 At the request of the Government of Sri Lanka, a joint FAO/WFP Crop and Food Security Assessment Mission (CFSAM) took place in June and July 2022 to analyse the country's agricultural production in 2022, particularly of the main staple cereals, and to assess households' food security conditions. The request was prompted by expectations of a well below agricultural output in 2022, owing to the effects of the severe macroeconomic crisis, which also pushed up food prices to record or near-record levels. This caused a significant worsening of households' food security.

Regional Cooperation for Sustainable Food Security in South Asia Nagesh Kumar,Joseph George,2019-08-02 This volume foregrounds the importance of regional cooperation in the context of food security challenges in South Asia. South Asia holds the key to global achievement of SDG targets of ending hunger and malnutrition - it accounts for nearly one-third of food-insecure people on the planet, with every third child suffering from stunting due to malnutrition. Similar food preferences, production systems, and the transboundary nature of agrarian ecosystems call for coordinated action by South Asian countries, complementing national actions dealing with food security challenges. In this volume, leading experts discuss the perspectives of key South Asian countries in leveraging regional cooperation for addressing food security challenges and reflect on the potential of cooperative actions in different areas. The book proposes a ten-point regional policy agenda covering cooperation for combatting climate change, regional trade liberalization,

operationalization of regional food reserves, leveraging technology, sharing of good practices, regional institution building, coordinated positions in multilateral trade negotiations, addressing trans-boundary outbreak of livestock diseases, strengthening food safety standards, and the management of shared natural resources. A key volume on accomplishing SDGs in the South Asian context, this book will be of immense interest to policy makers, researchers, and development practitioners. It is also essential reading for scholars and researchers in the areas of development studies, South Asia studies, food security, environment and sustainability.

The text covers the application of OMICs in crop plants, the integration of bioinformatics and multi-OMICs for precision breeding, de-novo domestication, CRISPR/Cas system for crop improvement, hybrid seed production, transgene free breeding, regulation for genome

edit crops, bioinformatics and genome editing, and other topics related to OMICs and genome editing. The text also includes a chapter on global regulations for genome edited crops, and explains how these regulations influence novel plant breeding techniques in their adopted countries. Edited by two highly qualified academics, OMICs-based Techniques for Global Food Security covers topics such as: Crops genome sequencing and their application for crop improvement, and functional characterization of cereal genome The role of OMICs-based technologies in plant sciences and utilization of different multi-OMICs approaches for crop improvement Genomic database and genetic resource of cereals, speed breeding for rapid crop improvement, and evolution of genome editing technologies CRISPR system discovery, history, and future perspective, and CRISPR/Cas system for biotic and abiotic stress resistance in cereals Providing a collection of recent literature focusing on developments and applications of OMICs-based technologies for crop improvement, OMICs-based Techniques for Global Food Security is an important read for plant breeders, molecular biologists, researchers, postdoctoral fellows, and students in disciplines for developing crops with high yield and nutritional potential.

Food Security Governance Nora McKeon,2014-12-17 This book fills a gap in the literature by setting food security in the context of evolving global food governance. Today's food system generates hunger alongside of food waste, burgeoning health

problems, massive greenhouse gas emissions. Applying food system analysis to review how the international community has addressed food issues since World War II, this book proceeds to explain how actors link up in corporate global food chains and in the local food systems that feed most of the world's population. It unpacks relevant paradigms – from productivism to food sovereignty – and highlights the significance of adopting a rights-based approach to solving food problems. The author describes how communities around the world are protecting their access to resources and building better ways of producing and accessing food, and discusses the reformed Committee on World Food Security, a uniquely inclusive global policy forum, and how it could be supportive of efforts from the base. The book concludes by identifying terrains on which work is needed to adapt the practice of the democratic public sphere and accountable governance to a global dimension and extend its authority to the world of markets and corporations. This book will be of interest to students of food security, global governance, development studies and critical security studies in general.
