Herbert R. Carter

Architecture and Engineering Oleg Kapliński, Wojciech Bonenberg, 2020-12-18 The book is addressed to architects and civil engineers. Design and research are areas connecting their activities. The contents of the book confirm the fact that the interface between architecture and engineering is multidimensional. The ways of finding points of contact between the two industries are highlighted. This is favored by the dynamically changing reality, supported by new design paradigms and new research techniques. The multithreaded subject matter of the articles is reduced to six sections: Research Scopes, Methods, Design Aspects, Context, Nature of Research, and Economy and Cost Calculation. Each of the articles in these six blocks has its weight. And so, in the Nature of Research section, the following areas have been underscored: laboratory tests, in situ research, field investigations, and street perception experiments. The section Design Aspects includes design-oriented thinking, geometrical forms, location of buildings, cost prediction, attractor and distractor elements, and shaping spatial structures. The new design and research tools are an inspiration and a keystone bonding architects and engineers.

Twist & Build Karel Volders, 2001 Architects often prefer to approach their designs as sculptors: Frank Gehry, for instance, sculpts his models in clay. Twist & Build is architect Karel Volders' analysis of non-orthogonal architecture. Volders starts his intriguing quest by exploring instances of slanting and perpendicular lines in town planning, analyzing a variety of twisted volumes through close critical commentary and with abundant illustrations.

3D Studio VIZ Stephen J. Ethier, Christine A. Ethier, 2000-11 For introductory-level courses in 3D Design and Concepts, Animation, Computer Graphics, Technical Illustration, Mechanical Design and Drafting, and Architectural Design and Drafting, in departments of Engineering, Architectural, Drafting, and Computer Graphic Arts. Ideal both for students who know just the basics about computers and CAD and for those who are experts in CAD but wish to add a new dimension, 3D Studio VIZ Fundamentals blends theory and practical applications in a hands-on, lab- and exercise-intensive tutorial. It provides a basic introduction to computer animation, an overview of 3D Studio VIZ, preparation for 3D modeling, 3D modeling, presentation, and practical applications that reflect today's animated world, e.g., in films, advertisements, and gaming environments. This book will be of special interest to those who use AutoCAD. Many of the features in VIZ have been modeled after AutoCAD's interface, allowing for faster learning and application. An appendix explains the features and procedure to bring AutoCAD files into 3D Studio VIZ.

Computer Aided Architectural Design Futures 2005 Bob Martens, Andre Brown, 2005-12-06
MARTENS Bob and BROWN Andre Co-conference Chairs, CAAD Futures 2005 Computer Aided

Architectural Design is a particularly dynamic field that is developing through the actions of architects, software developers, researchers, technologists, users, and society alike. CAAD tools in the architectural office are no longer prominent outsiders, but have become ubiquitous tools for all professionals in the design disciplines. At the same time, techniques and tools from other fields and uses, are entering the field of architectural design. This is exemplified by the tendency to speak of Information and Communication Technology as a field in which CAAD is embedded. Exciting new combinations are possible for those, who are firmly grounded in an understanding of architectural design and who have a clear vision of the potential use of ICT. CAAD Futures 2005 called for innovative and original papers in the field of Computer Aided Architectural Design, that present rigorous, high-quality research and development work. Papers should point towards the future, but be based on a thorough understanding of the past and present.

Advances in Information and Intelligent Systems Zbigniew W. Ras, William

Ribarsky, 2009-10-15 The College of Computing and Informatics (CCI) at UNC-Charlotte has three departments: Computer Science, Software and Information Systems, and Bioinformatics and Genomics. The Department of Computer Science offers study in a variety of specialized computing areas such as database design, knowledge systems, computer graphics, artificial intelligence, computer networks, game design, visualization, computer vision, and virtual reality. The Department of Software and Information Systems is primarily focused on the study of technologies and methodologies for information system architecture, design, implementation, integration, and management with particular emphasis on system security. The Department of Bioinformatics and Genomics focuses on the discovery, development and application of novel computational technologies to help solve important biological problems. This volume gives an overview of research done by CCI faculty in the area of Information & Intelligent Systems. Presented papers focus on recent advances in four major directions: Complex Systems, Knowledge Management, Knowledge Discovery, and Visualization. A major reason for producing this book was to demonstrate a new, important thrust in academic research where college-wide interdisciplinary efforts are brought to bear on large, general, and important problems. As shown in the research described here, these efforts need not be formally organized joint undertakings (through parts could be) but are rather a convergence of interests around grand themes.
