**Arduino for Musicians** Brent Edstrom, 2016-03-25 Arduino, Teensy, and related microcontrollers provide a virtually limitless range of creative opportunities for musicians and hobbyists who are interested in exploring do it yourself technologies. Given the relative ease of use and low cost of the Arduino platform, electronic musicians can now envision new ways of synthesizing sounds and interacting with music-making software. In Arduino for Musicians, author and veteran music instructor Brent Edstrom opens the door to exciting and expressive instruments and control systems that respond to light, touch, pressure, breath, and other forms of real-time control. He provides a comprehensive guide to the underlying technologies enabling electronic musicians and technologists to tap into the vast creative potential of the platform. Arduino for Musicians presents relevant

concepts, including basic circuitry and programming, in a building-block format that is accessible to musicians and other individuals who enjoy using music technology. In addition to comprehensive coverage of music-related concepts including direct digital synthesis, audio input and output, and the Music Instrument Digital Interface (MIDI), the book concludes with four projects that build on the concepts presented throughout the book. The projects, which will be of interest to many electronic musicians, include a MIDI breath controller with pitch and modulation joystick, retro step sequencer, custom digital/analog synthesizer, and an expressive MIDI hand drum. Throughout *Arduino for Musicians*, Edstrom emphasizes the convenience and accessibility of the equipment as well as the extensive variety of instruments it can inspire. While circuit design and programming are in themselves formidable topics, Edstrom introduces their core concepts in a practical and straightforward manner that any reader with a background or interest in electronic music can utilize. Musicians and hobbyists at many levels, from those interested in creating new electronic music devices, to those with experience in synthesis or processing software, will welcome *Arduino for Musicians*.

*What's Breath Got to Do With It* Offer Dan, 2024-03-01 Those who “laugh last” are the ones who postpone the last breath and breathe well until the day comes. My mom practiced Yoga and was a breathwork instructor. I started juggling my breath at the age of nine. Five decades later, I decided to write about my methods, personal experiences, and intimate memoirs, sharing my insights. The book is a culmination of persistent knowledge-seeking guided by science and cross-examined by personal observations; the approach sidesteps from the trodden path in presentation and interpretation. Even though *Air* is light, the subject of breathing can be heavy, burdened with myths and mystic words. I aim to simplify tangled topics yet deeply penetrate the matters discussed. The added humor should

assist in digesting the fiber of understanding respiration. Here's a summary of what's covered: · Basic explanations of the biology and chemistry of breathing. · Indications to assess personal effects of different breathing practices. · Practical ways to evaluate an individual's breathing profile. · Breathing exercises for physical and mental wellness. · Breathing tools for responding to immediate situations. Chances are my breathing practices will affect you differently than they affect me. Therefore, I intend to provide you with the know-hows and ways to tweak my practices so they may better suit you as an individual. Along the way, I will answer many questions like the ones below Why do traumatic events register differently when screaming out as opposed to holding the breath? How can synchronizing smiles with inhaling augment the effect of breathing exercises? How can video recordings of night sleeping make mouth-taping redundant? How does a 'breathing clock' improve body language synchronization when speaking to an audience? How does 'Dying man's breathing' assist in overcoming cravings? How can the respiratory 'dead space' bring a person back to life when performing mouth-to-mouth resuscitation? How to breathe when experiencing motion sickness? Why the breathing equation is changed when feeling seasick (motion + tilting)? How to breathe when getting a mouth burn from overeating chili? Why is it better to breathe the exact opposite way when overdosing on wasabi or mustard? For many, something that costs nothing is worthless; others believe the best things in life are free. Air is free yet extremely valuable, especially when it's in short supply. One thing's certain; you will get more out of this eBook than what you paid for—guaranteed! All profits from the sales of printed copies will be donated to charity.

Music, Brain, and Rehabilitation: Emerging Therapeutic Applications and Potential Neural

Mechanisms Teppo Särkämö, Eckart Altenmüller, Antoni Rodríguez-Fornells, Isabelle Peretz, 2016-08-05  
Music is an important source of enjoyment, learning, and well-being in life as well as a rich, powerful, and versatile stimulus for the brain. With the advance of modern neuroimaging techniques during the past decades, we are now beginning to understand better what goes on in the healthy brain when we hear, play, think, and feel music and how the structure and function of the brain can change as a result of musical training and expertise. For more than a century, music has also been studied in the field of neurology where the focus has mostly been on musical deficits and symptoms caused by neurological illness (e.g., amusia, musicogenic epilepsy) or on occupational diseases of professional musicians (e.g., focal dystonia, hearing loss). Recently, however, there has been increasing interest and progress also in adopting music as a therapeutic tool in neurological rehabilitation, and many

novel music-based rehabilitation methods have been developed to facilitate motor, cognitive, emotional, and social functioning of infants, children and adults suffering from a debilitating neurological illness or disorder. Traditionally, the fields of music neuroscience and music therapy have progressed rather independently, but they are now beginning to integrate and merge in clinical neurology, providing novel and important information about how music is processed in the damaged or abnormal brain, how structural and functional recovery of the brain can be enhanced by music-based rehabilitation methods, and what neural mechanisms underlie the therapeutic effects of music. Ideally, this information can be used to better understand how and why music works in rehabilitation and to develop more effective music-based applications that can be targeted and tailored towards individual rehabilitation needs. The aim of this Research Topic is to bring together research across multiple disciplines with a special focus on music, brain, and neurological rehabilitation. We encourage researchers working in the field to submit a paper presenting either original empirical research, novel theoretical or conceptual perspectives, a review, or methodological advances related to following two core topics: 1) how are musical skills and attributes (e.g., perceiving music, experiencing music emotionally, playing or singing) affected by a developmental or acquired neurological illness or disorder (for example, stroke, aphasia, brain injury, Alzheimer's disease, Parkinson's disease, autism, ADHD, dyslexia, focal dystonia, or tinnitus) and 2) what is the applicability, effectiveness, and mechanisms of music-based rehabilitation methods for persons with a neurological illness or disorder? Research methodology can include behavioural, physiological and/or neuroimaging techniques, and studies can be either clinical group studies or case studies (studies of healthy subjects are applicable only if their findings have clear clinical implications).
