*Melville's Monumental Imagination* Ian S.

Maloney,2014-02-04 *Melville's Monumental Imagination* explores the connection between the contested 19th century American monument tradition and one of the nation's most revered authors, Herman Melville (1819-1891). The book was written to fill a void in recent Melville scholarship. To date, there has not been a monograph that focuses exclusively on Melville's incorporation of monuments in his fictional world. The book charts the territory of Melville's novels in order to provide a trajectory of the monumental image in one particular literary form. This feature allows the reader to gradually see the monumental image as an important marker that sheds light into Melville's eventual abandonment of long fiction. *Melville's Monumental Imagination* combines literary analysis and cultural criticism for a long neglected aspect of our nation's iconic development in statuary.

**Experimental Economics** Nicolas Jacquemet, Olivier L'Haridon, 2018-11-29 Over the past two decades,

experimental economics has moved from a fringe activity to become a standard tool for empirical research. With experimental economics now regarded as part of the basic tool-kit for applied economics, this book demonstrates how controlled experiments can be a useful in providing evidence relevant to economic research. Professors Jacquemet and L'Haridon take the standard model in applied econometrics as a basis to the methodology of controlled experiments. Methodological discussions are illustrated with standard experimental results. This book provides future experimental practitioners with the means to construct experiments that fit their research question, and new comers with an understanding of the strengths and weaknesses of controlled experiments. Graduate students and academic researchers working in the field of experimental economics will be able to learn how to undertake, understand and criticise empirical research based on lab experiments, and refer to specific experiments, results or designs completed with case study applications.

*Introduction to Health and Safety in Construction* Phil Hughes, Ed Ferrett, 2007-02-19 Introduction to Health and Safety in Construction covers the specific challenges faced by the construction industry as well as the basics of occupational safety and health in general. The coverage of this book has been directly matched to the Certificate course in Construction Safety and Health from NEBOSH. However, the comprehensive coverage of health and safety topics in a construction context make it relevant for other courses in Construction Design and Management, Construction Safety and Health, and the Built Environment, both in the UK and overseas, as well as for construction professionals who are looking for an introduction to health and safety which addresses the specific problems encountered in their industry. In its

second edition the book has been updated to incorporate changes in legislation, regarding: Noise Vibration COSHH Work at Height Fire Safety Construction Design and Management Asbestos The text is highly illustrated in full colour, easy to read and includes self-assessment questions taken directly from NEBOSH examinations. A chapter on study skills offers support for professionals returning to study. The text is also supported with checklists, report forms and record sheets, making it a valuable reference tool for construction managers, supervisors, designers, building and civil engineers to consult on the day to day issues of health and safety.

### **Programming with Motif™ Keith D.**

Gregory, 2012-12-06 About this Book This book is a detailed introduction to programming with the OSF /Motif™ graphical user interface. It is an introduction in that it does not require the reader to have experience programming in the X Window environment. It is detailed in that it teaches you how to use the interface components provided by Motif in a complex application. Although it contains a great deal of reference material, it is not meant as an authoritative reference - that is the job of the OSF/Motif Programmer's Reference, which uses over 900 pages in the process. Instead, this book provides its reference material in a practical, how to manner and allows the reader to use the

Programmer's Reference effectively. The target reader is an experienced C programmer and user of the X Window System under the UNIX operating system. 'the reader should be familiar with the tools provided by UNIX for the compilation and testing of programs; while this book does examine the process by which a Motif program is compiled, it does not explain that process. It also assumes that the reader is familiar with x terms such as 'pointer' and 'display'.
