Avrel Seale

With One Hand Tied behind My Brain Avrel Seale, 2020-11-17 Most would not expect a book about a stroke to be entertaining, but this memoir will force you to laugh through a tragedy, then cry, then laugh again. Avrel Seale was fifty, did not smoke or drink, had low blood pressure, and had hiked more than two hundred miles the year a stroke nearly ended his life. In an instant, he was teleported into the body of an old man—unbalanced, shaky, spastic, and half-paralyzed. Overnight, he was plunged into a world of brain surgeons, nurses, insurance case managers, and an abundance of therapists. Beginning three weeks before his stroke to set the stage, Seale leads us through the harrowing day of his stroke and emergency brain surgery with minute-by-minute intensity. We then follow him through ICU, a rehab hospital, and a neuro-recovery group-living center, where we meet a memorable cast of other stroke survivors and also those recovering from auto accidents and gunshots. Finally home, Seale leads us through a new life of firsts, including returning to work, to driving, to playing guitar, to camping, and even to writing a book—all with one hand. What emerges from his humor (“elegant but devastating”) is a revealing critique of the hospital experience, the insurance industry, and rehab culture. And his nothing-off-the-table quest for recovery shows both the sobering struggles and inspiring possibilities of life after a stroke in twenty-first century America.

A Crusade for Stroke Prevention John Crayton Pruitt, 1999-11 Pruitt (surgeon and founder and co-director of the Vascular Institute of Florida) offers an understandable but detailed discussion of the causes of stroke and the latest techniques in prevention, screening, and treatment. Includes a list of questions to ask a surgeon, clear diagrams, and slightly larger-than-usual typeface. Annotation copyrighted by Book News, Inc., Portland, OR

Our Stroke of Luck J. Gerry Purdy, 2016-12-29 Most people think that stroke victims end up

looking like Frankenstein with a horrible facial expression and erratic movements. But, that is not the way it has to be. Today, it is possible for some stroke victims to make a full recovery. Gerry Purdy knows this because his wife, Alicia – a healthy, beautiful and smart person – suffered a stroke on August 23, 2011 and was able to return to her vivacious self. Our Stroke of Luck portrays the life they had together. Gerry and Alicia had dated in high school and got back together for their 45th high school reunion. Life was good. And then – Bam! – without warning Alicia suffered a stroke. Find out how Alicia’s neurosurgeon was able to remove the clot from her brain that caused the stroke. Experience the tense ups and downs of that night—one moment seeming as though she might be paralyzed on her left side for the rest of her life and then the next seeing a flash of hope. Gerry and Alicia were lucky that the radiologist was able to identify the clot in her brain and lucky to get her transferred to the Marcus Stroke Center at Grady Hospital in Atlanta. They were lucky that Dr. Nogueira was able to extract the clot from Alicia’s brain. And, finally, they were lucky that she was able to make a full recovery. Truly, this was their stroke of luck.

Reducing Fuel Consumption and Greenhouse Gas Emissions of Medium- and Heavy-Duty Vehicles, Phase Two National Academies of Sciences, Engineering, and Medicine,Transportation Research Board,Division on Engineering and Physical Sciences,Board on Energy and Environmental Systems,Committee on Assessment of Technologies and Approaches for Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles, Phase Two,2020-05-15 Medium- and heavy-duty trucks, motor coaches, and transit buses - collectively, medium- and heavy-duty vehicles, or MHDVs - are used in every sector of the economy. The fuel consumption and greenhouse gas emissions of

MHDVs have become a focus of legislative and regulatory action in the past few years. This study is a follow-on to the National Research Council's 2010 report, *Technologies and Approaches to Reducing the Fuel Consumption of Medium-and Heavy-Duty Vehicles*. That report provided a series of findings and recommendations on the development of regulations for reducing fuel consumption of MHDVs. On September 15, 2011, NHTSA and EPA finalized joint Phase I rules to establish a comprehensive Heavy-Duty National Program to reduce greenhouse gas emissions and fuel consumption for on-road medium- and heavy-duty vehicles. As NHTSA and EPA began working on a second round of standards, the National Academies issued another report, *Reducing the Fuel Consumption and Greenhouse Gas Emissions of Medium- and Heavy-Duty Vehicles, Phase Two: First Report*, providing recommendations for the Phase II standards. This third and final report focuses on a possible third phase of regulations to be promulgated by these agencies in the next decade.

Thrombolytic Therapy for Acute Stroke Patrick D. Lyden, 2007-11-08 It often takes time for a new therapeutic modality to mature into an accepted treatment option. After initial approval, new drugs, devices, and procedures all go through this process until they become “vetted” by the scientific community as well as the medical community at large. Thrombolysis for treatment of stroke is no exception. *Thrombolytic Therapy for Acute Stroke, Second Edition* comes four years after the first edition and provides a very comprehensive, updated perspective on the use of intravenous rt-TPA in acute stroke. The authors provide longer term follow-up on the pivotal clinical trials that led to Food and Drug Administration approval, data concerning phase 4 trials in larger numbers of patients, and, most importantly, the community experience that has accumulated since its release. They add to this the latest promising information concerning intra-arterial thrombolysis, which is still under investigation and more speculative sections concerning possible new avenues of clinical research

such as combining intravenous thrombolysis with neuroprotective therapies or intra-arterial thrombolysis. A wealth of factual information is supplemented by chapters containing sage opinion from Drs. Lyden and Caplan concerning the logistical, economic, and procedural issues that have been generated since the advent of this technology. Importantly, diagnosis does not take a back seat to therapeutics as illustrated by sections devoted to evaluation of the stroke patient, very useful illustrative cases and clinical comments, and chapters on the latest in imaging as applied to this field.

Technology and the Doctor-Patient Relationship D.C. Lozar, M.D.,2019-08-16 Medicine is an ancient profession that advances as each generation of practitioners passes it down. It remains a distinguished, flawed and rewarding vocation--but it may be coming to an end as we know it. Computer algorithms promise patients better access, safer therapies and more predictable outcomes. Technology reduces costs, helps design more effective and personalized treatments and diminishes fraud and waste. Balanced against these developments is the risk that medical professionals will forget that their primary responsibility is to their patients, not to a template of care. Written for anyone who has considered a career in health care--and for any patient who has had an office visit where a provider spent more time with data-entry than with them--this book weighs the benefits of emerging technologies against the limitations of traditional systems to envision a future where both doctors and patients are better-informed consumers of health care tools.
