Contemporary Task-Based Language Teaching in Asia Michael Thomas, Hayo Reinders, 2015-02-26 Over the last decade task-based approaches to language learning and teaching (TBLT) have become a global focus of increased levels of research. Governments around the world have turned to TBLT as a potential solution for curricula that lack authentic and meaningful engagement with language learning and are failing to motivate students as a result. This book focuses on Asia, where this shift has been particularly in evidence. TBLT has often been implemented in top-down approaches to curriculum development, which presents a huge range of challenges at the cultural as well as the pedagogic level. Contemporary Task Based Language Teaching in Asia looks at the drivers, stakeholders and obstacles across the region. Some countries have adapted TBLT to deal with the local constraints, others have found it hard to apply and many are still in the process of investigating its implementation in their specific contexts. This collection is important to all involved in language development, from curriculum reform to materials development. It assists from programme evaluation to the setting of assessment standards. The chapters cover all aspects of language education across Asia, from primary to tertiary, private and public education, as well as innovations at local, regional and national levels.

Task Analyses of Military Intelligence Critical Combat Functions Terry P. Bartkoski, 1998 This preface provides the user with necessary and relevant information concerning the development of critical combat functions (CCF): CCF 1, Conduct Intelligence Planning, CCF 2, Collect Information, CCF 3, Process Information, and CCF 4, Disseminate Intelligence, as performed by a brigade. A CCF is defined as. an integration (i.e., interrelationship) among participants and tasks that represents a force multiplier with a definable outcome. Participants and organizational structure identified in this analysis are based on table of organization and equipment (TOE) 87042L100, dated 10/05/95. Field Manual (FM) 71-3, The Armored and Mechanized Infantry Brigade, January 1996, was used to identify special staff positions. These analyses of a brigade's performance of the CCFs which compose the Intelligence Bafflefield Operating System (BOS) are a product of the process of developing a training strategy for the brigade. The analyses describe tasks, participants, products, processes, and relationships necessary for providing intelligence to the heavy brigade commander and staff, higher and lower units, supporting units, and adjacent units.--DTIC.

Task Sequencing and Instructed Second Language Learning Melissa Baralt, Roger Gilabert, Peter Robinson, 2014-07-31 Task Sequencing and Instructed Second Language Learning provides theoretical rationales for, and empirical studies of, the effects of sequencing language learning tasks to maximize second language learning. Examples of task sequences, and both laboratory and classroom-based research into them, are presented. This is the first collection of so far under-researched studies on the effects of task

sequencing, framed within the Cognition Hypothesis of Task-based Language Teaching (TBLT) and the SSARC model for task sequencing. Perspectives include -- laboratory-based and classroom-based research designs -- implications for teacher training -- laboratory and classroom research methods -- conversational interaction -- task sequencing and Task Based Language Teaching syllabus design

Interaction, Feedback and Task Research in Second Language Learning Alison Mackey, 2020-08-06 The role of interaction and corrective feedback is central to research in second language learning and teaching, and this volume is the first of its kind to explain and apply design methodologies and materials in an approachable way. Using examples from interaction, feedback and task studies, it presents clear and practical advice on how to carry out research in these areas, providing step-by step guides to design and methodological principles, suggestions for reading, short activities, memory aids and an A-Z glossary for easy reference. Its informative approach to study design, and in-depth discussions of implementing research methodology, make it accessible to novice and experienced researchers alike. Commonly used tools in these paradigms are explained, including stimulated recalls, surveys, eye-tracking, metanalysis and research synthesis. Open research areas and gaps in the literature are also discussed, providing a point-of-departure for researchers making their first foray into interaction, feedback and task-based teaching research.

Task Switching and Cognitive Control James Grange, George Houghton, 2014-04-25 One thing that separates human beings from the rest of the animal world is our ability to control behavior by referencing internal plans, goals, and rules. This ability, which is crucial to our success in a

complex social environment, depends on the purposeful generation of task sets--states of mental readiness that allow each of us to engage with the world in a particular way or achieve a particular aim. This book reports the latest research regarding the activation, maintenance, and suppression of task sets. Chapters from many of the world's leading researchers in task switching and cognitive control investigate key issues in the field, from how we select the most relevant task when presented with distracting alternatives, to how we maintain focus on a task (eyes on the prize) and switch to a new one when our goals or external circumstances change. Chapters also explore the brain structures responsible for these abilities, how they develop during childhood, and whether they decline due to normal aging or neurological disorders. Of interest especially to scholars and students of cognitive psychology, the volume offers thorough, multi-disciplinary coverage of contemporary research and theories concerning this fundamental yet mysterious aspect of human brain function and behavior.

Multitasking: Executive Functioning in Dual-Task and Task Switching Situations Tilo Strobach, Mike Wendt, Markus Janczyk, 2018-03-27 Multitasking refers to performance of multiple tasks. The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks (i.e., dual tasking) or executing multiple tasks in varying sequences (i.e., task switching). In the literature, numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and/or sequentially active component of task-sets in these situations. However,

these approaches have been rather vague regarding explanatory concepts (e.g., task-set inhibition, preparation, shielding, capacity limitation), widely lacking theories on detailed mechanisms and/ or empirical evidence for specific subcomponents. The present research topic aims at providing a selection of contributions on the details of executive functioning in dual-task and task switching situations. The contributions specify these executive functions by focusing on (1) fractionating assumed mechanisms into constituent subcomponents, (2) their variations by age or in clinical subpopulations, and/ or (3) their plasticity as a response to practice and training.

Task Groups in the Social Services Marian Fatout, Steven R. Rose, 1995-02-17 This work should serve as a sound foundation for students and practitioners as they begin their study of the significance of various groups in social work practice. --Choice Collective problem solving: a powerful and effective means of assessing a situation, determining a course of action, and accomplishing goals. In the realm of social services, this formidable method has been evidenced in the development of task groups; in the textbook arena, it is clearly and definitively presented in Task Groups in the Social Services. Focusing on the role of the social worker, the authors consider such aspects as the recruitment and composition of groups, participation as a

team member, group shepherding, and dealing with problem behaviors within the group. Selected problem-solving approaches, including brainstorming, societal judgment analysis, and the Delphi technique, are evaluated in terms of process and outcome. From implementation through achievement, the merits and methods of application for a variety of task groups are assessed. This sophisticated work will be a vital resource for students of social work and social work practitioners alike.

Task-Based Language Teaching in Foreign Language Contexts Ali Shehadeh, Christine A. Coombe, 2012 This volume extends the Task-Based Language Teaching: Issues, Research and Practice books series by deliberately exploring the potential of task-based language teaching (TBLT) in a range of EFL contexts. It is specifically devoted to providing empirical accounts about how TBLT practice is being developed and researched in diverse educational contexts, particularly where English is not the dominant language. By including contributions from settings as varied as Japan, China, Korea, Venezuela, Turkey, Spain, and France, this collection of 13 studies provides strong indications that the research and implementation of TBLT in EFL settings is both on the rise and interestingly diverse, not least because it must respond to the distinct contexts, constraints, and possibilities of foreign language learning. The book will be of interest to SLA researchers and students in applied linguistics and TESOL. It will also be of value to course designers and language teachers who come from a broad range of formal and informal educational settings encompassing a wide range of ages and types of language learners.
