Computer Education for Teachers Vicki F. Sharp, 2008-11-03 COMPUTER EDUCATION FOR TEACHERS In today's world, technology is changing quickly—and so are the ways teachers use that technology. From serving as a library resource to helping students with special needs, computer technology continues to be one of the most powerful tools in a teacher's arsenal. In this new edition of *Computer Education for Teachers*, Vicki Sharp introduces teachers to computer technology in a meaningful, practical way. She helps readers gain the knowledge and skills necessary to integrate computers into the classroom in ways that will best serve both the teacher and the student. In this Sixth Edition you will find: Online tutorials demonstrating projects such as creating a newsletter and producing a podcast A new Digital Photography chapter and an expanded section on using a video camera Coverage of the latest innovations, including podcasts, social networking sites, blogs, wikis, open journaling, course management systems, virtual reality communities, personal response systems and more Online project templates and examples Numerous evaluations and checklists in PDF format for easy downloading, interactive self-study tests, and PowerPoint™ presentations Software reviews, an online hardware reference guide, and practical classroom activities

The Art Teacher's Desktop Reference Michael E. Parks, 1994 This book is a hands-on approach for both readers and teachers alike supporting a discipline based Art Education approach that incorporates history, criticism, studio and aesthetics (DBAE).

Computer Education for Teachers Vicki F. Sharp, 2001-10 Extremely clear and comprehensive, *Computer Education for Teachers* features classroom lessons, activities, and projects, over 300 clear illustrations, state-of-the-art technology developments, a chapter on multimedia, two Internet chapters, a large collection of annotated Internet Sites in each chapter, a chapter on computers in special education, an annotated recommended software listing, a summary of current computer research, and an extensive bibliography. Designed to meet the needs of the student unfamiliar with the use of the computer in the classroom, the book is written for undergraduate and graduate education students who want an up-to-date, readable, practical, and concise introduction to computers for teachers. It assumes no prior experience with computers. The chapters are written so that the reader can pursue them in any order.

The Other Side of the Desk N. J. Poklitar, 2011-03-04 *The Other Side of the Desk* is an accumulation of stories and personal conclusions made by a teacher with over thirtyseven years of teaching experience. Also included are stories from her years as a child-student growing up in a small town in Iowa. The stories are every teacher's stories. Any teacher reading them might say, "Yes, that happened to me" or "Yes, I have often felt that way." Also included in many of the stories are tips for teachers (according to N. J.). These might be beneficial to 'novice' teachers or 'wannabe' teachers.

Computer Education for Teachers Vicki F. Sharp, 2004-06 Designed to meet the needs of the student unfamiliar with the use of the computer in the classroom, this text is written for undergraduate and graduate education students who want an up-to-date, readable, practical, and concise introduction to computers for teachers. Included in the text are a wealth of classroom lessons that integrate technology.

Working as a Teacher in Your Community Sophia Natasha Sunseri, 2015-07-15 A career in education goes far beyond the basic motivations for a job: teachers make an impact on their communities at large. This title is addressed to those readers who want to make a difference in their communities with a career in teaching. Various positions and the necessary preparation and educational and certification requirements are explored, as well as volunteer opportunities that will help high school and college students get a taste for teaching. Job-hunting skills specific to teaching are covered as well, and the text concludes with a discussion of the future of careers in teaching.

Computers, Curriculum, and Cultural Change Eugene F. Provenzo, Jr., Arlene Brett, Gary N. McCloskey, 2004-09-22 *Computers, Curriculum, and Cultural Change: An Introduction for Teachers*, Second Edition is a comprehensive introduction to using computers in educational settings. What

distinguishes this text from others on the topic is its focus on: *the issue of how computers are redefining our culture and society and the work of schools; *the idea of using the computer as a tool for increasing efficiency and productivity in curriculum; and *the concept of the computer as a tool not only for efficiency, but actually as a means of enhancing intelligence. This text provides students with an introduction to basic computer skills and experience, enhanced by helpful pedagogical aids, including case studies and highlighted features, such as Portfolio Development, Reflective Practice, Computing Timelines, Filmographies, bibliographical sources, and a text-linked glossary of key computer terms. New in the Second Edition: In addition to being thoroughly updated, a new section has been added to Chapter 1, Creating an Electronic Portfolio, with activities linked to the standards for educational computing established by the International Society for Technology in Education (ISTE). Electronic portfolio activities at the end of each chapter give students the hands-on practical skills they need and, at the same time, cover the necessary theoretical and conceptual material for an introductory educational computing course.

Computer Education for Teachers Vicki F. Sharp, 1996 This text aims to assist future teachers in either becoming computer literate or using computers more effectively in a classroom situation. Practical examples are provided, including samples of various types of hardware and programs for use in instructional planning and classroom instruction. This edition includes a new chapter on telecommunications, including such topics as videoconferencing and distant education, Internet and on-line services. The chapter on Multimedia has been revised and incorporates classroom projects and coverage of virtual reality, morphing and warping in order to introduce students to ways of using the computer to combine text, graphics and sound into a multimedia presentation capable of improving instruction. There are also updated discussions of software and an updated list of annotated software including CD-ROM and laserdisc.

Integrating Technology Into the Curriculum Shelly Frei, Amy Gammill, Sally Irons, 2007 Step into the digital age of learning by teaching and applying technology effectively in your classroom. This up-to-date, research-based book provides teachers with classroom-tested ideas and resources to enhance instruction and help make the integration of technology a seamless process. Topics include how to differentiate with technology in a lesson, technology standards, software programs, information literacy, project-based learning and assessment, classroom management, computer troubleshooting, and more. This resource supports core concepts of STEM instruction and supports the interdisciplinary themes from the Partnership for 21st Century Skills. 224pp.

As If There Were No Tomorrow Tom Delaney, 2012-07-20 Teachers are at times overwhelmed by the cultural disparities between themselves and their students, the environmental deterrents to learning, and the degree of learning deficiencies they are asked to help students to overcome. How can educators communicate state and national objectives to a streetwise, inner-city youth in a way that he feels inspired to buy into them? How do they establish a pleasing interchange that draws a troubled child toward learning goals that are not within his frame of reference? No Tomorrow addresses these problems. It replaces shoptalk and generic theories with actual scenarios, tested strategies and learning activities. These are tools that Dr. Delaney and his colleagues developed and implemented during his three decades as a classroom teacher, administrator, and staff developer. Hence, this book is a collection of ideas and inspiration that can help the teacher create an academic atmosphere where no student needs to feel left behind. It also provides an "attitude self-check" that helps teachers determine if their personal views are promoting or impeding learning or, even worse, precipitating a crisis. His holistic, student-centered approach has proven effective in the most hostile classrooms in the state of Georgia. Teachers will recognize problems and remediations that affirm their own challenges and triumphs. The methods discussed are not prescriptive and not meant to be a touchstone for accomplished teaching. They are, however, a fountain of ideas from which fellow educators are invited to draw inspiration.

Using Information Technology Effectively in Teaching and Learning Bridget Somekh, Niki Davis, 1997 First Published in 1996. Routledge is an imprint of Taylor & Francis, an informa company.

Factors Correlating with Teachers' Use of Computers in the Classroom Samia A. Wahab, 2008-11-11 There is a need to understand the factors correlating with teachers' instructional use of computers, because much of the present research focuses on students rather than teachers. This study examines several factors relating to the use of computers in the classroom by teachers. The factors examined include teacher attitudes, emotions, beliefs, and outside influences. This was done by a review of the present literature, administering two surveys, and analyzing the survey data. Questionnaires were distributed to faculty at five randomly selected high schools in a Midwest city participating in the study. Data from the survey was then examined to determine which factors correlate with teacher computer use in the classroom. The results of this study will help improve understanding of teachers' instructional computer use.

Emergent Practices and Material Conditions in Learning and Teaching with Technologies Teresa Cerratto Pargman, Isa Jahnke, 2019-03-21 This book explores the complexities of interacting with digital technologies in the everyday flow of practices in schools, museums, and the home. In particular, the authors pay attention to the material conditions of such practices via the exploration of media discourses on information and communication technologies in the classroom; the ongoing digitization of the school; the use of video chat for language learning; the instantiation of CrossActionSpaces in an urban science classrooms; the development of symbolic technologies such as the Carbon Footprint Calculator; the design of apps and virtual museums for learning science; the use of text message tools for collaborative learning in teacher education and the design, implementation, and evaluation of Augmented Reality apps in outdoor learning. The book is grounded in case studies presented by scholars at the workshop, "Changing Teaching and Learning Practices in Schools with Tablet-Mediated Collaborative Learning: Nordic, European and International Views" and the workshop "Emergent Practices and Material Conditions in Tablet-mediated Collaborative Learning and Teaching" both of which have been held at the Computer-Supported Collaborative Learning conference (CSCL). This volume brings together inspirational and high-quality chapters that raise a range of important ideas and showcase the importance of looking beyond technology-enhanced learning. Taken together, this volume unpacks a variety of everyday situations by engaging with what is really happening with digital technologies rather than what is expected to happen with them in educational settings. The take-away message is a call for research on learning, teaching, and digital technologies that enables engagement with the materiality of educational practices and, in particular, their constitutive relationships that configure the contemporary educational practices of the digital age.

Computers in Education Paul F. Merrill, 1996 Designed to help teachers use computer technology to increase the efficiency and effectiveness of the educational process. In retaining its organization according to a three-fold taxonomy - Tutor, Tool, and Tutee, this text provides some organization to the myriad of possible computer applications in education.

Smart Learning in Smart Cities Dejian Liu, Ronghuai Huang, Marek Wosinski, 2017-04-13 This book introduces readers to the current status of smart learning in China by providing extensive and accurate data from different contexts of smart learning. In particular, it investigates smart learning in smart cities, which extends the concept of smart learning to cover both formal and informal learning, and to support life-long learning. With digital technologies and the Internet becoming increasingly integrated into learning, the demand for smart learning has grown steadily, especially in smart city scenarios. As the need for life-long learning is on the rise, smart learning environments in cities should be equipped to meet people's demands. Smart learning/education is also one of the key applications of smart cities. Though the book's content mainly focuses on the

educational technology field, research in cities and industries is also included. This book offers a valuable resource for graduate students in educational technology, smart learning environment and smart city researchers, cooperative university managers, and all others who are interested in smart learning industries.

Integrating Computer Technology Into the Classroom Gary R. Morrison, Deborah L. Lowther, 2005 This book focuses on integrating computers into teaching through the use of an inquiry-based, easy-to-use model for creating lesson plans. Teachers can use this 10-step process to design student-centered learning environments in which computer technology is integrated as a tool for learning rather than as a delivery mechanism. In addition, this book provides many practical examples and tips throughout to facilitate student understanding of chapter content. Teaching Computer for Secondary & Tertiary Levels' 2007 Ed. ,

Computer Science and Engineering Education for Pre-collegiate Students and Teachers Andrea Burrows, 2019-06-11 Now more than ever, as a worldwide STEM community, we need to know what pre-collegiate teachers and students explore, learn, and implement in relation to computer science and engineering education. As computer science and engineering education are not always “stand-alone” courses in pre-collegiate schools, how are pre-collegiate teachers and students learning about these topics? How can these subjects be integrated? Explore six articles in this book that directly relate to the currently hot topics of computer science and engineering education as they tie into pre-collegiate science, technology, and mathematics realms. There is a systematic review article to set the stage of the problem. Following this overview are two teacher-focused articles on professional development in computer science and entrepreneurship venture training. The final three articles focus on varying levels of student work including pre-collegiate secondary students’ exploration of engineering design technology, future science teachers’ (collegiate students) perceptions of engineering, and pre-collegiate future engineers’ exploration of environmental radioactivity. All six articles speak to computer science and engineering education in pre-collegiate forums, but blend into the collegiate world for a look at what all audiences can bring to the conversation about these topics.
