An Optimizing Medium-term Planning Model for the Netherlands Railways A. A. I. Holtgreffe, 1975

Rail Human Factors around the World John R Wilson,Ann Mills,Theresa Clarke,Jane Rajan,Nastaran Dadashi,2012-09-13 The rail human factors/ergonomics community has grown quickly and extensively, and there is much increased recognition of the vital importance of ergonomics/human factors by rail infrastructure owners, rail operating companies, system developers, regulators and national and trans-national government. This book, the third on rail human factors, is drawn from papers presented at the Lille 3rd International Conference on Rail Human Factors. The contributions cover the range of human and organisational issues on the railway, from driving to signalling and control to maintenance and engineering work, to passengers and security issues such as trespass, and address improvements in safety, reliability, use of capacity, efficiency and quality. The book represents the best of recent work in rail human factors, and starts to define the framework for the next few years. As well as the human factors areas listed above, the conference and thus the book are notable for sessions on simulation in rail human factors and on human factors in metro design and operation. The book also reflects the increased attention being paid to, and developments in, understanding all aspects of rail stakeholders' behaviour, and also the contribution of ergonomics/human factors to innovative network control systems which will enhance reliability, safety and use of capacity. The book will be of interest to a number of groups: those working in the rail sector from a human factors point of view; the larger rail industry and related bodies generally; and in terms of transferrable knowledge to ergonomists and human factors specialists working in other industries.

Railways in the Netherlands A. J. Veenendaal, 2001 This book traces the origin, growth, decline, and resurrection of the railway system of the Netherlands from its beginnings to privatization in the 1990s, and places its history in the context of the political and socioeconomic development of the country. At first, the largely agrarian and mercantile Dutch society saw little use for such a novel system of transportation, thanks to a highly developed system of roads and waterways. However, the success of early English railways did not go unnoticed, and in 1834 a plan was developed for a railway from Amsterdam to the Prussian Ruhr area to replace the transportation system along the Rhine River. Although this initial plan was finally abandoned, other lines were opened in 1839. The technology was largely borrowed from England and Belgium, but from the outset Dutch engineers played an important role in the development of the network. Apart from a short-lived state system, the first railways were built and operated by private companies, but when this did not result in an efficient network, the state stepped in again in 1860 to bring coherence. By 1900, the national network was complete, but labor unrest escalated, leading to the national strike of 1903, which

reverberated for many years in the Dutch Parliament, railroad board rooms, and socialist political parties. The exigencies of World War I increased the grip of the state on the railways, which ultimately resulted in 1938 in the complete unification of the railways, albeit under public ownership. In the 1920s and 1930s, competition from other forms of transportation resulted in a curtailing of services and the closing of unprofitable lines. World War II devastated the Dutch railway system and necessitated an almost complete rebuilding. In the postwar era, population growth, greater mobility, pollution problems, and lack of space for new highways led to an intensive use of existing railways and the construction of new lines to link new suburbs and airports with the existing network. The privatization craze of the 1990s separated the ownership of the network from its operations, but the final relationship has yet to be established.

Planning in Intelligent Systems Wout van Wezel, R. J. Jorna, Alexander M. Meystel, 2006-03-03
The first comparative examination of planning paradigms This text begins with the principle that the ability to anticipate and plan is an essential feature of intelligent systems, whether human or machine. It further assumes that better planning results in greater achievements. With these principles as a foundation, *Planning in Intelligent Systems* provides readers with the tools needed to better understand the process of planning and to become better planners themselves. The text is divided into two parts: * Part One, Theoretical, discusses the predominant schools of thought in planning: psychology and cognitive science, organizational science, computer science, mathematics, artificial intelligence, and systems theory. In particular, the book examines commonalities and differences among the goals, methods, and techniques of these various approaches to planning. The result is a better understanding of the process of planning through the cross-fertilization of ideas. Each chapter contains a short introduction that sets forth the interrelationships of that chapter to the main

ideas featured in the other chapters. * Part Two, Practical, features six chapters that center on a case study of The Netherlands Railways. Readers learn to apply theory to a real-world situation and discover how expanding their repertoire of planning methods can help solve seemingly intractable problems. All chapters have been contributed by leading experts in the various schools of planning and carefully edited to ensure a consistent high standard throughout. This book is designed to not only expand the range of planning tools used, but also to enable readers to use them more effectively. It challenges readers to look at new approaches and learn from new schools of thought. Planning in Intelligent Systems delivers effective planning approaches for researchers, professors, students, and practitioners in artificial intelligence, computer science, cognitive psychology, and mathematics, as well as industry planners and managers.

Behavioral Operations in Planning and Scheduling Jan C. Fransoo, Toni Waefler, John R. Wilson, 2010-09-22 Human and organizational factors have a substantial impact on the performance of planning and scheduling processes.
