Trucking 101 Ronald Griffith,2018-05-28 Every day you see semi-trucks hauling freight through your town. Have you ever wondered about the men and women who drive these trucks? For 10 years I drove one of these trucks. In two and a half years driving for KLLM Transport Services, headquartered in Jackson, MS., I covered a quarter million miles and was in 46 of the lower 48 states. I changed to a local company, Remel Sims Trucking headquartered in Wenatchee, WA. (My home town) For the next 5 years I drove mostly between Central Washington and the Los Angeles Basin. As I neared retirement, I quit driving to L.A. and became the spare driver picking up and delivering in state shipments. Toss your stuff in the sleeper, climb into the passenger's seat and join me as I experience the good, the bad, and the ugly of life on the road.

Getting a Job in the Transportation Industry Katherine Yaun,2016-07-15 Finding work in the transportation industry puts employees at the center of the action: helping move people and goods, whether that means driving a municipal bus, moving consumer goods via trucks or trains, or helping coordinate the complicated, interconnected web of international civil aviation. In this book, the numerous types of jobs in this field—driver, pilot, logistics professional, transportation engineer, and many more—are highlighted, and strategies are detailed to secure education, training, and ultimately, a job in this most vital and crucial sector of the economy.

Transport for Suburbia Paul Mees,2009-12 The need for effective public transport is greater than ever in the 21st century. With countries like China and India moving towards mass-automobility, we face the prospects of an environmental and urban health disaster unless alternatives are found. It is time to move beyond the automobile age. But while public transport has worked well in the dense cores of some big cities, the problem is that most residents of developed countries now live in dispersed suburbs and smaller cities and towns. These places usually have little or no public transport, and most transport commentators have given up on the task of changing this: it all seems too hard. This book argues that the secret of 'European-style' public transport lies in a generalizable model of network planning that has worked in places as diverse as rural Switzerland, the Brazilian city of Curitiba and the Canadian cities of Toronto and Vancouver. It shows how this model can be adapted to suburban, exurban and even rural areas to provide a genuine alternative to the car, and outlines the governance, funding and service planning policies that underpin the

success of the world's best public transport systems.--Back cover.
