Isabel Martin Lewis

Eclipses Seth Kingston, 2020-07-15 An eclipse occurs when one celestial body such as a moon or planet moves into the shadow of another celestial body, or when one celestial body passes between two celestial bodies. This book explains the different types of eclipses, why eclipses are important astronomical phenomena to study, and the scientific history of studying eclipses. A graphic organizer presents information and helps readers understand complex topics, while primary sources in the form of historic images grab readers' attention.

Solar Eclipse Alan Dyer, 2022-10-25 Total solar eclipses—the perfect alignment of the Sun and Moon that causes the Sun's light to temporarily block part of the Earth's surface, creating a surreal twilight during the day and

revealing the otherwise invisible gossamer tendrils of the spectacular atmosphere of the Sun-were common in the medieval, 18th, and 19th centuries-are the subject of this book. The book discusses the definition of a total solar eclipse and the reasons behind the hype surrounding it. It also explains why more than 200 million Americans were able to witness the 2017 Great American Eclipse in person or online. It discusses the myths that have existed for centuries about eclipses, how they have helped us understand the Solar System, and theories about the universe. It serves as a helpful how-to guide for anyone who wants to get the most out of seeing and photographing a total eclipse. The book focuses on the various types of eclipse, as well as their mythology, history, and celestial mechanics. It also shows what solar eclipses might look like to someone on another planet in the Solar System and talks about other types of eclipses like lunar, transit, and occultations. The technical details of the various types of eclipses and the distinctive characteristics of each are provided in order to fully comprehend and appreciate the wonder of the celestial dance that is taking place above. Fifty Year Canon of Lunar Eclipses Fred Espenak, 1989

Five Millennium Catalog of Solar Eclipses: -1999 to +3000 Fred Espenak, Jean Meeus, 2021-07-30 During the 5,000-year period from -1999 to +3000 (2000 BCE to 3000 CE), Earth will experience 11,898 eclipses of the Sun. The eclipses are distributed as follows: 4200 partial eclipses, 3956 annular eclipses, 3173 total eclipses, and 569 hybrid eclipses. The Five Millennium Catalog of Solar Eclipses: -1999 to +3000 contains a catalog listing the date, eclipse type, and principal characteristics of every eclipse during this period. Tabulated data for each eclipse includes the catalog number, canon plate number, calendar date, Terrestrial Dynamical Time of greatest eclipse, T , lunation number, Saros number, eclipse type, Quincena Lunar Eclipse parameter, γ , eclipse magnitude, geographic coordinates of greatest eclipse (latitude and longitude), and the circumstances at greatest eclipse (i.e., Sun altitude and azimuth, path width, and central line duration). The statistics of the solar eclipse distribution over 5,000 years are investigated in detail. This includes eclipse types by month and by century, eclipse frequency in the calendar year, extremes in eclipse magnitude for all eclipse types, maximum durations of total, annular, and hybrid eclipses, and eclipse duos (two eclipses within 30 days of each other). A discussion of the major cycles in the Moon's orbit and their role in the occurrence of solar eclipses is presented. These include the synodic, the anomalistic, and the draconic months. Finally, the periodicity of solar eclipses is investigated with particular attention to the Saros cycle. Tables list the start and end dates, number, and type of eclipses of every Saros series in progress during the 5,000-year period covered by the Five Millennium Canon. The Catalog serves as a supplement to the Five Millennium Canon of Solar Eclipses which contains a map of every eclipse. The Canon and the Catalog both use the same solar and lunar ephemerides as well as the same value of T . This 1-to-1 correspondence between them enhances the value of each. The researcher may now search, evaluate, and compare eclipses graphically (Canon) or textually (Catalog).

Eclipses Frank Close, 2019-09-03 Have you ever seen a total solar eclipse? If the question caused you to search

your memory, the correct answer would have been no. A common response is: Yes--I saw one, it was about 90% partial eclipse where I lived. A 90% partial eclipse is indeed a remarkable phenomenon, but true totality leaves all else in the shade, in all senses of the phrase. Ask the question of anyone who has experienced the full sensation of being obliterated by the moon's shadow, and they will reply yes--without hesitation--and continue with a monologue describing the overwhelming experiences and unique phenomena that ensued. On 21 August 2017 millions of people across the United States witnessed The Great American Eclipse of the Sun. The moment it was over, people around the world were asking questions: what caused the weird shadows and colors in the build up to totality? Were those ephemeral bands of shadows gliding across the ground in the seconds before totality real or an optical illusion? Why this, what that, but above all: where and when can I see a total solar eclipse again? Eclipses: What Everyone Needs to Know helps explain the profound differences between a 99.99% partial eclipse and true totality, and inform readers how to experience this most beautiful natural phenomenon successfully. It covers eclipses of sun, moon, and other astronomical objects, and their applications in science, as well as their role in history, literature, and myth. It describes the phenomena to expect at a solar eclipse and the best ways to record them--by camera, video, or by simple handmade experiments. The book covers the timetable of upcoming eclipses, where the best locations will be to see them, and the opportunities for using them as vehicles for inspiration and education. As a veteran of seven total solar eclipses, physicist Frank Close is an expert both on the theory and practice of eclipses. Eclipses: What Everyone Needs to Know is a popular source of information on the physics of eclipses.

The Five Millennium Canon of Solar Eclipses: -1999 to +3000 contains an individual global map for each eclipse delineating the geographic regions of visibility for both the partial and central (total, annular, or hybrid) phases. Modern political borders are plotted to assist in the determination of eclipse visibility. The uncertainty in Earth's rotational period expressed in ΔT and its impact on the geographic visibility of eclipses in the past and future is discussed. The statistics of the solar eclipse distribution over 5,000 years are discussed in detail. This includes eclipse types by month and by century, eclipse frequency in the calendar year, extremes in eclipse magnitude for all eclipse types, maximum durations of total, annular, and hybrid eclipses, and eclipse duos (two eclipses within 30 days of each other). Eclipse Kelsey Oseid, 2024-02-06 Discover the ancient myths and fascinating science of the world's most striking celestial phenomena—eclipses—in this educational, beautifully illustrated guide by the acclaimed author of *What We See in the Stars*. Awe-inspiring, majestic, and always a little otherworldly, eclipses have captivated our imaginations for thousands of years. Whether plunged into darkness as the sun disappears in the middle of the day or enchanted by the moon's blood red glow as a vast shadow creeps across its surface, our ancestors both feared and revered eclipses, seeking to understand these striking celestial events through both storytelling and science.

In Eclipse, celebrated artist and author Kelsey Oseid explores the science and mystique of lunar and solar eclipses, from the myths of our ancestors to today. Did you know that in Chinese legends, solar eclipses were caused by dragons eating the sun? Or that the Norse people believed that a sky wolf chased away the moon? Oseid presents these rich historical stories alongside informative, accessible science to enrich your understanding: a solar eclipse only occurs during a new moon; a selenelion is when you can see the lunar eclipse in front of you and the sunset behind you; and the Mars Rovers have even taken photographs of eclipses from Mars. Filled with captivating information and vivid, colorful illustrations, Eclipse will delight and inspire astronomy lovers of all ages.
