George Cramoisi

Beyond the Black Box George Bibel,2008-01-31 The black box is orange—and there are actually two of them. They house the cockpit voice recorder and the flight data recorder, instruments vital to airplane crash analyses. But accident investigators cannot rely on the black boxes alone. Beginning with the 1931 Fokker F-10A crash that killed legendary football coach Knute Rockne, this fascinating book provides a behind-the-scenes look at plane wreck investigations. Professor George Bibel shows how forensic experts, scientists, and engineers analyze factors like impact, debris, loading, fire patterns, metallurgy, fracture, crash testing, and human tolerances to determine why planes fall from the sky—and how the information gleaned from accident reconstruction is incorporated into aircraft design and operation to keep commercial aviation as safe as possible.

AIR CRASH INVESTIGATIONS: MYSTERIOUS CRASH KILLS 25 The Crash of United Airlines Flight 585 George Cramoisi, Editor,2012-06-06 This amended report explains the accident involving United Airlines flight 585, a Boeing 737-200, on its way from Denver to Colorado Springs, which crashed on March 3, 1991 near Colorado Springs Municipal Airport. Only after the crash of USAir 427 in 1994 and a similar incident with Eastwind 517 in 1996 the NTSB was able to pinpoint the cause of this crash: jammed rudder. The Boeing 737 has a history of rudder system-related anomalies, this finally solved the mystery of sudden jamming of the rudders of this aircraft.

AIR CRASH INVESTIGATIONS: PILOT ERROR KILLS 50 PEOPLE in BUFFALO, the Crash of Colgan Air Flight 3407 Allistair Fitzgerald,2010-04-16 On February 12, 2009, about 2217 eastern standard time, Colgan Air, Flight 3407, a Bombardier DHC-8-400, on approach to Buffalo-Niagara International Airport, crashed into a residence in Clarence Center, New York, 5 nautical miles northeast of the airport. The 2 pilots, 2 flight attendants, and 45 passengers aboard the airplane were killed, one person on the ground was killed, and the airplane was destroyed. The National Transportation Safety Board determined that the probable cause of this accident was a pilot's error.

Air Crash Investigations Editor Igor Korovin,2011-09 On July 19, 1989, an United Airlines' DC-10-10, on its way from Denver to Chicago, experienced a catastrophic failure of the No. 2 tail-mounted engine during cruise flight. The airplane subsequently crashed during an attempted landing at Sioux Gateway Airport, Iowa. Of the 296 people on board 111 were killed.

AIR CRASH INVESTIGATIONS - Loss of Cargo Door - The Near Crash of United Airlines Flight 811 Dirk Barreveld,2015-12 On February 24, 1989, United Airlines flight 811, a Boeing 747-122, lost a cargo door as it was climbing between 22,000 and 23,000 feet after taking off from Honolulu, Hawaii, en route to Sydney, Australia with 355 persons aboard. As a result of the incident nine of the passengers were ejected from the airplane and lost at sea. The cargo door was recovered in two pieces from the ocean floor at a depth of 14,200 feet on September 26 and October 1, 1990. The probable cause of this accident was a faulty switch or wiring in the door control system. Contributing to the cause of the accident was a deficiency in the design of the cargo door locking mechanisms. Also contributing to the accident was a lack of timely corrective actions by Boeing and the FAA following a 1987 cargo door opening incident on a Pan Am B-747.

Air Crash Investigations Igor Korovin,2011-05 On May 25, 1979, American Airlines Flight 191, a McDonnell-Douglas DC-10-10 aircraft, on its way from Chicago to Los Angeles, crashed just after take-off near Chicago-O'Hare International Airport, Illinois. During the take off the left engine and pylon assembly and about 3 ft of the leading edge of the left wing separated from the aircraft and fell to the runway. Flight 191 crashed killing two hundred and seventy one persons on board and two persons on the ground. The accident remains the deadliest airliner accident to occur on United States soil.

AIR CRASH INVESTIGATIONS: JAMMED RUDDER KILLS 132, The Crash of USAir Flight 427 Hank Williamson, editor,2011-10 The Boeing 737 has a history of rudder system-related anomalies, including numerous instances of jamming. A number of accidents and incidents were the result of the airplanes' unexpected movement of their rudders. During the course of the four and a half year investigation of the crash of USAir Flight 427 near Aliquippa, Pennsylvania, killing 132 people, the NTSB discovered that the PCU's dual servo valve could jam as well as deflect the rudder in the opposite direction of the pilots' input, due to thermal shock, caused when cold PCUs are injected with hot hydraulic fluid. This finally solved the mystery of sudden jamming of the rudders of this aircraft.

The Crash of Comair 5191 George Cramoisi,2009-09-01 On August 27, 2006, Comair Flight 5191, a Bombardier CL-600-2B19, crashed during takeoff from the wrong runway of Blue Grass Airport, Lexington, Kentucky, killing 49 of the 50 people aboard. From the beginning everything went wrong. First the captain and first officer boarded the wrong airplane, only after starting the auxiliary power unit they found out they were in the wrong aircraft. Taxiing to the takeoff position the captain and first officer were so deeply engaged in a private conversation that they did not realize they took the wrong runway. The air traffic controller did not notice anything.

The Next Crash Amy L. Fraher,2014-05-09 Amy L. Fraher offers a shocking perspective on the aviation industry by a former United Airlines pilot. Amy L. Fraher uncovers the story airline executives and government regulators would rather not tell.

AIR CRASH INVESTIGATIONS: BURNED ALIVE IN MADRID, The Crash of Spanair Flight JKK5022 Allistair Fitzgerald, editor,2012-02-01 On 20 August 2008, Spanair flight JKK5022, a McDonnell Douglas DC-9-82 departed Madrid Barajas Airport on its way to Gran Canaria Airport.During take-off the aircraft crashed, due to pilot errors, near the end of runway 36L, killing 154 of the 172 people on board.

Why Planes Crash David Soucie,Ozzie Cheek,2011-09-14 Boarding an airplane strikes at least a small sense of fear into most people. Even though we all have heard that the odds of being struck by lightning are greater than the odds of perishing in a plane crash, it still doesn't feel that way. Airplane crashes might be rare, but they do happen, and they're usually fatal. David Soucie insists that most of these deaths could be prevented. He's worked as a pilot, a mechanic, an FAA inspector, and an aviation executive. He's seen death up close and personal—deaths of colleagues and friends that might have been pre-vented if he had approved certain safety measures in the aircrafts they were handling. His years of experience have led Dave to become an impassioned consultant on the topic of air-line safety. This includes not only advising the Obama administration, but also taking a leading role in the congressionally funded NextGen interdepartmental initiative in regards to both the department of transportation and the departments of defense, homeland security, FBI, CIA, and others. Find out the truth about airplane safety and discover what the future holds for air travel.

AIR CRASH INVESTIGATIONS, PILOT ERROR? The Crash of Ethiopian Airlines Flight 409 Hans Griffioen, editor,2012-04 On 25 January 2010, at 00:41:30 UTC, Ethiopian Airlines flight ET 409, a Boeing 737-800, on its way from Beirut to Addis Ababa, crashed just after take-off from Rafic Hariri International Airport in Beirut, Lebanon, into the Mediterranean Sea about 5 NM South West of Beirut International Airport. All 90 persons on board were killed in the accident. The investigation concluded that the probable causes of the accident were pilot errors due to loss of situational awareness. Ethiopian Airlines refutes this conclusion. Other factors that could have lead to probable causes are the increased workload and stress levels that have most likely led to the captain reaching a situation of loss of situational awareness similar to a subtle incapacitation and the F/O failure to recognize it or to intervene accordingly. Ethiopian Airlines refutes the investigation. According to the airline the final report was biased, lacking evidence, incomplete and did not present the full account of the accident.

Air Crash Investigations: The Crash of American Airlines Flight 587 Hans Griffioen,2009-07-01 On November 12, 2001, American Airlines flight 587, an Airbus A300-605R, took off from John F. Kennedy International Airport, New York. Flight 587 was a scheduled passenger flight to Santo Domingo, Dominican Republic, with a crew of 9 and 251 passengers aboard the airplane. Shortly after take-off the airplane lost its tail, the engines subsequently separated in flight and the airplane crashed into a residential area of Belle Harbor, New York. All 260 people aboard the airplane and 5 people on the ground were killed, and the airplane was destroyed by impact forces and a post crash fire.

Air Crash Investigations Allistair Fitzgerald,2009-11 On January 31, 2000, Alaska Airlines, Flight 261, a McDonnell Douglas MD-83, was on its way from Puerto Vallarta, Mexico, to Seattle, Washington, when suddenly the horizontal stabilizer of the plane jammed. While passengers were praying for their life, Captain Thompson and First officer Tansky tried to make an emergency landing in Los Angeles. They did not make it, the plane suddenly crashed into the Pacific Ocean, killing all 93 people aboard. The NTSB concluded that the failure of the horizontal stabilizer was caused by insufficient maintenance. In other words the crash of Alaska Airlines Flight 261 could have been avoided.

Air Crash Investigations: Horror in Guam, the Crash of Korean Air Flight 801 Igor Korovin,2010-02-22 On August 6, 1997, about 0142:26 Guam local time, Korean Air flight 801, a Boeing 747-300, crashed at Nimitz Hill, Guam. The aircraft was on its way from Seoul, Korea to Guam with 237 passengers and a crew of 17 on board. Of the 254 persons on board, 228 were killed. The airplane was destroyed by impact forces and a post-crash fire. The National Transportation Safety Board determined that the probable cause of the accident was captain's fatigue and Korean Air's inadequate flight crew training.

Mayday Marion F. Sturkey,2005 MAYDAY examines airline accidents caused by mechanical failure, fire, mid-air collision, terrorist hijacking, and human error. Also, accidents caused by sabotage, suicide, fuel exhaustion, mistaken identity shoot-down, spatial disorientation, bad weather, controlled flight into terrain, and other perils. The author is a former military and commercial pilot. Armed with meticulous research, he cuts through the fog of technical aviation jargon and describes each accident in easy to understand layman's language. For each accident the reader witnesses the aerial crisis, the crash, the black-box recordings, the investigation, and the often elusive Probable Cause. Readers re-live the airline accidents which have marred man's conquest of the skies. MAYDAY is a gut-wrenching and mesmerizing read for all Aviation Enthusiasts.

AIR CRASH INVESTIGATIONS EYE OF THE NEEDLE The Crash of British Airways Flight 38 Hans Griffioen, editor,2012-11-01 On 28 November 2008, a Boeing 777-200ER, operated by British Airways as flight BA38, on its way from Beijing, China to London (Heathrow), suffered on approach to Heathrow Airport an in-flight engine rollback. At 720 feet agl, the right engine ceased responding to autothrottle commands for increased power and instead the power reduced to 1.03 Engine Pressure Ratio (EPR). Seven seconds later the left engine power reduced to 1.02 EPR. This reduction led to a loss of airspeed and the aircraft touching down some 330 m short of the paved surface of Runway 27L at London Heathrow. The investigation identified that the reduction in thrust was due to restricted fuel flow to both engines. It was determined that the restriction occurred most probably in the Fuel Oil Heat Exchangers. The investigation identified the forming of ice in the fuel system as probable cause. The aircraft was destroyed, but there were no casualties.

AIR CRASH INVESTIGATIONS: LOST...The Crash of American Airlines Flight 965 George Cramoisi, editor,2012-04-01 On December 20, 1995, American Airlines Flight 965, a Boeing 757-223, was on a scheduled passenger flight from Miami, Florida, U.S.A., to Cali, Colombia. Close to its final destination the pilots erroneously cleared the approach waypoints from their navigation computer. When the controller asked the pilots to check back in over Tulua, north of Cali, it was no longer programmed into the computer. They were lost and the aircraft crashed into a mountain. Of the 163 people on board, 4 passengers survived miraculously the accident.

Air Crash Investigations: The End of the Concorde Era, the Crash of Air France Flight 4590 George Cramoisi,2010-12 On Tuesday 25 July 2000 Air France Flight AFR 4590, a Concorde registered F-BTSC, took off from Paris Charles de Gaulle, to undertake a charter flight to New York with nine crew members and one hundred passengers on board. During takeoff from runway 26 right at Roissy Charles de Gaulle Airport, a tyre was damaged. A major fire broke out. The aircraft was unable to gain height or speed and crashed onto a hotel, killing all 109 people on board and 4 on the ground. The crash would become the end of the Concorde era.
