Universal Artificial Intelligence Marcus Hutter,2005-12-29 Personal motivation. The dream of creating artificial devices that reach or outperform human intelligence is an old one. It is also one of the dreams of my youth, which have never left me. What makes this challenge so interesting? A solution would have enormous implications on our society, and there are reasons to believe that the AI problem can be solved in my expected lifetime. So, it's worth sticking to it for a lifetime, even if it takes 30 years or so to reap the benefits. The AI problem. The science of artificial intelligence (AI) may be defined as the construction of intelligent systems and their analysis. A natural definition of a system is anything that has an input and an output stream. Intelligence is more complicated. It can have many faces like creativity, solving problems, pattern recognition, classification, learning, induction, deduction, building analogies, optimization, surviving in an environment, language processing, and knowledge. A formal definition incorporating every aspect of intelligence, however, seems difficult. Most, if not all known facets of intelligence can be formulated as goal driven or, more precisely, as maximizing some utility function. It is, therefore, sufficient to study goal-driven AI; e. g. the (biological) goal of animals and humans is to survive and spread. The goal of AI systems should be to be useful to humans.

Universal Subgoalng and Chunking John Laird,Paul Rosenbloom,Allen Newell,2012-12-06 Rarely do research paths diverge and converge as neatly and productively as the paths exemplified by the two efforts contained in this book. The story behind these researches is worth recounting. The story, as far as I'm concerned, starts back in the Fall of1976, when John Laird and Paul Rosenbloom, as new graduate students in computer science at Carnegie-Mellon University, joined the Instructible Production System (IPS) project (Rychener, Forgy, Langley, McDermott, Newell, Ramakrishna, 1977; Rychener & Newell, 1978). In those days, production systems were either small or special or both (Newell, 1973; Shortliffe, 1976). Mike Rychener had just completed his thesis (Rychener, 1976), showing how production systems could effectively and perspicuously program the full array of artificial intelligence (AI) systems, by creating versions of Studellt (done in an earlier study, Rychener 1975), EPAM, GPS, King-Pawn-King endgames, a toy-blocks problem solver, and a natural-language input system that connected to the blocks-world system.

The Universal Journalist David Randall,2000-07-30 Irrespective of language or culture, good journalists share a common commitment to the search for truth, often in far from ideal circumstances. With this assertion, David Randall emphasises that good journalism does not only concern universal objectives, it must also involve the acquisition of a range of skills that will empower journalists to operate in an industry where ownership, technology and information are constantly changing. This acclaimed handbook challenges old attitudes, procedures and techniques of journalism. This fully updated edition includes new sections on handling numbers and statistics, computer-assisted reporting and writing for the Web, as well as an extensively revised chapter on what makes a good reporter, and a new section on sources. Now, more than ever, this handbook is an invaluable guide to the 'universals' of good journalistic practice for professional and trainee journalists world-wide.

The Eight Universal Dimensions of Culture from a Synthesis of Cultural Taxonomies Sophie Kunert,2022-08-29 The crucial element of this book constitutes the synthesis of cultural dimensions from existing cultural taxonomies, extended by the operationalization of the eight identified Universal Dimensions of Culture (UDCs) into a questionnaire. First, an extensive Systematic Literature Review (SLR) is pursued to identify the current state of research, demonstrating the research gap on a unified approach for classifying national cultures into cultural dimensions. Eight assumptions displaying the eight UDCs are derived from the results of the SLR. Subsequently, an evaluation and

selection framework for identifying the research base of comparable existing cultural taxonomies is developed. A research base of 11 cultural taxonomies and 50 cultural dimensions is retrieved. These serves as the basis for developing the eight UDCs, following a synthesis process and protocol. The eight UDCs are operationalized into a questionnaire, which is extensively pre-tested by experts and in the field. An example country study for Germany, Canada, and Brazil is conducted, and the corresponding country profiles for the eight UDCs are displayed.

Steps Toward a Universal Patient Medical Record Michael McGuire,2004 This book describes how an automated patient medical record could be built that could evolve into a universal patient record. Such a universal patient record would change medical care from a focus on short-term care to one oriented to long-term, preventive-care. It would remove patient care from being the province of the single physician to that of the responsibility of many different healthcare providers, possibly located anywhere in the world.

Werner Hegemann And The Search For Universal Urbanism Craseman Christine Collins,2005-04-26 Werner Hegemann (1881-1936), a German-born multidisciplinary critic of the built environment, was well known in Europe and the United States in his lifetime. A critic rather than a designer, he did not fit easily into any school or category. To those seeking to promote modernism, Hegemann was something of an awkward figure - influential and undoubtedly authoritative but unorthodox. Today, however, when studies of modernism have largely shed their proselytizing role, he is of great relevance. Our interest now is less in those who proposed the answers than in those who asked the questions - and particularly the way in which those questions were framed. For this Hegemann is a key figure. Based on documentation largely unavailable in English - including Hegemann's published and unpublished writings, his correspondence, his diaries, the author's interviews, archival materials lent to her by Hegemann's widow, and the author's own substantial collection - this is the first comprehensive study of Hegemann for historians, architects, and urbanists.--BOOK JACKET.
