Locating Visual-Material Rhetorics Amy Propen,2012-01-03 Parks, maps, and mapping technologies like the GPS are objects of visual and material culture that rely on the interplay of text, context, image, and space to guide our interpretations of the world around us. LOCATING VISUAL-MATERIAL RHETORICS: THE MAP, THE MILL, AND THE GPS examines in depth, and in several contemporary settings, how visual and material discursive artifacts, when understood as rhetorical, shape our understanding of the unique cultural moments that these artifacts set out to represent.

Making Maps, Third Edition John Krygier,Denis Wood,2016-08-02 Using a wealth of illustrations--with 74 in full color--to elucidate each concisely presented point, the revised and updated third edition continues to emphasize how design choices relate to the reasons for making a map and its intended purpose. All components of map making are covered: titles, labels, legends, visual hierarchy, font selection, how to turn phenomena into visual data, data organization, symbolization, and more.--Back cover.

Making Maps, Second Edition John Krygier,Denis Wood,2011-04-15 Acclaimed for its innovative use of visual material, this book is engaging, clear, and compelling—exactly how an effective map should be. Nearly every page is organized around maps and other figures (many in full color) that illustrate all aspects of map making, including instructive examples of both good and poor design choices. The book covers everything from locating and processing data to making decisions about layout, symbols, color, and type. Readers are invited to think critically about both the technical features and social significance of maps as they learn to create better maps of their own. New to This Edition*Extensively revised and expanded core chapters on map design.*An annotated map design exemplar is used to show how the concepts in each chapter play out on an actual map.*Updated to reflect current technological developments.*Larger size and redesigned pages make the book even more user friendly.

Mapping Inner Space Nancy Margulies,Nusa Maal,2004 Visual Mapping is an easy-to-learn, straightforward system for generating and organising any ideas. Using a central image, key words, colours, codes and symbols, the process is both fun and fast. For many the traditional style of writing ideas in a linear fashion, using one colour on a lined piece of paper, is habit.

Visual Meetings David Sibbet,2010-08-26 Use eye-popping visual tools to energize your people! Just as social networking has reclaimed the Internet for human interactivity and co-creation, the visual meetings movement is reclaiming creativity, productivity, and playful exchange for serious work in groups. Visual Meetings explains how anyone can implement powerful visual tools, and how these tools are being used in Silicon Valley and elsewhere to facilitate both face-to-face and virtual group work. This dynamic and richly illustrated resource gives meeting leaders, presenters, and consultants a slew of exciting tricks and tools, including Graphic recording, visual planning, story boarding, graphic templates, idea mapping, etc. Creative ways to energize team building, sales presentations, staff meetings, strategy sessions, brainstorming, and more Getting beyond paper and whiteboards to engage new media platforms Understanding emerging visual language for leading groups Unlocking formerly untapped creative resources for business success, Visual Meetings will help you and your team communicate ideas more effectively and engagingly.

The Secret Language of Maps Carissa Carter,Stanford d.school,2022-04-19 A highly visual exploration of diagrams and data that helps you understand how maps are part of everyday thinking, how they tell stories, and how they can reframe your point of view, from Stanford University's world-renowned d.school.

"This book is the ultimate legend to mapping all kinds of data."—Jessica Hagy, Webby Award-winning blogger of Indexed and author of How to Be Interesting (In Ten Simple Steps) Maps aren't just geographic, they are also infographic and include all types of frameworks and diagrams. Any figure that sorts data visually and presents it spatially is a map. Maps are ways of organizing information and figuring out what's important. Even stories can be mapped! The Secret Language of Maps provides a simple framework to deconstruct existing maps and then shows you how to create your own. An embedded mystery story about a woman who investigates the disappearance of an old high school friend illustrates how to use different maps to make sense of all types of information. Colorful illustrations bring the story to life and demonstrate how the fictional character's collection of data, properly organized and "mapped," leads her to solve the mystery of her friend's disappearance. You'll learn how to gather data, organize it, and present it to an audience. You'll also learn how to view the many maps that swirl around our daily lives with a critical eye, aware of the forces that are in play for every creator.

Map It Out Elisabeth Wiig,Carolyn Wilson,2008-01-01 Map It Out is the perfect resource for students who rely heavily on visual cues for learning and communicating, including individuals with autism and auditory processing difficulties. This 328-page book provides graphic organizers and 50 reproducible units of conceptual maps targeting the following language areas: Meaning and Content (Semantics) Word Definitions Verbal Analogies Metaphors and Similes Text Comprehension Story Organizer Interpreting Text Titles Who-Story Analysis Dynamic Characterization Context (Pragmatics) Decision-Making Requests for Clarification Perspective Taking Negotiating Terms Developing Trust School Knowledge/Study Skills Remembering Events Remembering Teacher Instructions School (Organizational) Culture Each Map It Out unit relates to academic and social situations faced by youth at all levels of instruction. The units provide: An introduction with sample dialogue and ideas for extending activities. A master map to use as a teacher¿s guide to summarize the key relationships. A completed map to illustrate how students might use the map. A blank work map to hand out to students to complete individually or as a group. With Map It Out you will have one or more maps at your fingertips to use each day, especially when you¿re using the classroom curriculum for the basis of your intervention or if you are providing collaborative instruction with general and special educators! Want to customize the 50 conceptual maps? Then, purchase Map It Out Customizable Word Maps CD-ROM. The CD-ROM allows you to type information into the chart, and then read the customized map onscreen or print it out for instructional use.

Visual Complexity Manuel Lima,2013-09-10 Manuel Lima's smash hit Visual Complexity is now available in paperback. This groundbreaking 2011 book—the first to combine a thorough history of information visualization with a detailed look at today's most innovative applications—clearly illustrates why

making meaningful connections inside complex data networks has emerged as one of the biggest challenges in twenty-first-century design. From diagramming networks of friends on Facebook to depicting interactions among proteins in a human cell, Visual Complexity presents one hundred of the most interesting examples of informationvisualization by the field's leading practitioners.

Computational Maps in the Visual Cortex Risto Miikkulainen,James A. Bednar,Yoonsuck Choe,Joseph Sirosh,2006-01-16 For more than 30 years, the visual cortex has been the source of new theories and ideas about how the brain processes information. The visual cortex is easily accessible through a variety of recording and imagining techniques and allows mapping of high level behavior relatively directly to neural mechanisms. Understanding the computations in the visual cortex is therefore an important step toward a general theory of computational brain theory.

Map-Seeking Circuits in Visual Cognition David W. Arathorn,2002 This work presents a bold new theory of the cognitive circuitry of the brain, with emphasis on the functioning of human vision. Departing from conventional precepts in the fields of artificial intelligence, neuroscience, and visual psychophysics, the author has developed a computational theory that provides a unitary explanation for a wide range of visual capabilities and behaviors, most of which have no accepted theoretical explanation. He describes a cortical mechanism termed map-seeking" and demonstrates its explanatory power in areas as diverse as limb-motion planning and perceptual deficits associated with schizophrenia. The author argues that map-seeking is a fundamental, broadly applicable computational operation with algorithmic, neuronal, and analog electronic implementations, and that its generality makes it suitable as the core of a computational explanation for several cognitive functions. Variations of this map-seeking circuit perform recognition under visual transformations, tracking, scene segmentation, and determination of shape from view displacement. The mathematical principle on which map-seeking depends, a superposition ordering property, solves the combinatorial explosion problem that has plagued all other approaches to visual computation. The author demonstrates that map-seeking is capable of realistic performances in neuronal form and in many current technological procedures. Because of its breadth of application, it is a plausible cortical theory. Because it can be implemented electronically, it forms the basis for a computational technology highly suited for visual, and other perceptual, cognitive, and motor applications.

Understanding Maps J.S. Keates,2014-10-29 Addresses the fundamental principles of visual perception and map symbolism and critically examines the assumptions behind the theories of psychophysical testing and cartographic communication. This revised and expanded edition includes new sections on the relationship between cartography and art, and the distinction between knowledge and skill.

Visual Tools for Transforming Information Into Knowledge David Hyerle,2008-09-05 Helps teachers think about what they are doing in the classroom with graphic organizers and how they can use them more effectively. —Mark Johnson, Principal Glenwood Elementary School, Kearney, NE With an emphasis on transforming information into knowledge, everyone who considers themselves a learner or a facilitator of someone else's learning would benefit from the author's message and ideas. —Judith A. Rogers, Professional Learning Specialist Tucson Unified School District, AZ Develop students' thinking, note-taking, and study skills with powerful visual tools! Visual tools have the unique capacity to communicate rich patterns of thinking and help students take control of their

own learning. This second edition of A Field Guide to Using Visual Tools shows teachers of all grades and disciplines how to use these tools to improve instruction and generate significant positive changes in students' cognitive development and classroom performance. Expert David Hyerle describes three basic types of visual tools: brainstorming webs that nurture creativity, graphic organizers that build analytical skills and help process specific content, and concept maps that promote cognitive development and critical thinking. Updated with new research and applications for three kinds of Thinking Maps®, this essential resource: Expands teacher skills with practical guides for using each type of tool Presents recent research on effective instructional strategies, reading comprehension, and how the brain works Includes templates, examples, and more than 70 figures that show classroom applications By utilizing these powerful, brain-compatible learning aids, teachers can help students strengthen higher-order thinking skills, master content and conceptual knowledge, and become independent learners!

The Map Reader Martin Dodge,Rob Kitchin,Chris Perkins,2011-05-09 WINNER OF THE CANTEMIR PRIZE 2012 awarded by the Berendel Foundation The Map Reader brings together, for the first time, classic and hard-to-find articles on mapping. This book provides a wide-ranging and coherent edited compendium of key scholarly writing about the changing nature of cartography over the last half century. The editorial selection of fifty-four theoretical and thought provoking texts demonstrates how cartography works as a powerful representational form and explores how different mapping practices have been conceptualised in particular scholarly contexts. Themes covered include paradigms, politics, people, aesthetics and technology. Original interpretative essays set the literature into intellectual context within these themes. Excerpts are drawn from leading scholars and researchers in a range of cognate fields including: Cartography, Geography, Anthropology, Architecture, Engineering, Computer Science and Graphic Design. The Map Reader provides a new unique single source reference to the essential literature in the cartographic field: more than fifty specially edited excerpts from key, classic articles and monographs critical introductions by experienced experts in the field focused coverage of key mapping practices, techniques and ideas a valuable resource suited to a broad spectrum of researchers and students working in cartography and GIScience, geography, the social sciences, media studies, and visual arts full page colour illustrations of significant maps as provocative visual 'think-pieces' fully indexed, clearly structured and accessible ways into a fast changing field of cartographic research

Atlas of Science Katy Borner,2010-09-17 Science maps that can help us understand and navigate the immense amount of results generated by today's science and technology. Cartographic maps have guided our explorations for centuries, allowing us to navigate the world. Science maps have the potential to guide our search for knowledge in the same way, allowing us to visualize scientific results. Science maps help us navigate, understand, and communicate the dynamic and changing structure of science and technology—help us make sense of the avalanche of data generated by scientific research today. Atlas of Science, featuring more than thirty full-page science maps, fifty data charts, a timeline of science-mapping milestones, and 500 color images, serves as a sumptuous visual index to the evolution of modern science and as an introduction to "the science of science"—charting the trajectory from scientific concept to published results. Atlas of Science, based on the popular exhibit, "Places & Spaces: Mapping Science", describes and displays successful mapping techniques. The heart of the book is a visual feast: Claudius Ptolemy's Cosmographia World Map from 1482; a guide to a PhD thesis that resembles a subway map; "the structure of science" as revealed in a map of citation relationships in papers published in 2002; a visual periodic table; a history flow visualization of the Wikipedia article on abortion; a

globe showing the worldwide distribution of patents; a forecast of earthquake risk; hands-on science maps for kids; and many more. Each entry includes the story behind the map and biographies of its makers. Not even the most brilliant minds can keep up with today's deluge of scientific results. Science maps show us the landscape of what we know.

Mapping It Out Mark S. Monmonier,1993-06 Writers know only too well how long it can take—and how awkward it can be—to describe spatial relationships with words alone. And while a map might not always be worth a thousand words, a good one can help writers communicate an argument or explanation clearly, succinctly, and effectively. In his acclaimed How to Lie with Maps, Mark Monmonier showed how maps can distort facts. In Mapping it Out: Expository Cartography for the Humanities and Social Sciences, he shows authors and scholars how they can use expository cartography—the visual, two-dimensional organization of information—to heighten the impact of their books and articles. This concise, practical book is an introduction to the fundamental principles of graphic logic and design, from the basics of scale to the complex mapping of movement or change. Monmonier helps writers and researchers decide when maps are most useful and what formats work best in a wide range of subject areas, from literary criticism to sociology. He demonstrates, for example, various techniques for representing changes and patterns; different typefaces and how they can either clarify or confuse information; and the effectiveness of less traditional map forms, such as visibility base maps, frame-rectangle symbols, and complementary scatterplot designs for conveying complex spatial relationships. There is also a wealth of practical information on map compilation, cartobibliographies, copyright and permissions, facsimile reproduction, and the evaluation of source materials. Appendixes discuss the benefits and limitations of electronic graphics and pen-and-ink drafting, and how to work with a cartographic illustrator. Clearly written, and filled with real-world examples, Mapping it Out demystifies mapmaking for anyone writing in the humanities and social sciences. A useful guide to a subject most people probably take too much for granted. It shows how map makers translate abstract data into eye-catching cartograms, as they are called. It combats cartographic illiteracy. It fights cartophobia. It may even teach you to find your way.—Christopher Lehmann-Haupt, The New York Times

National Geographic Visual Atlas of the World National Geographic Society (U.S.),2009 A comprehensive, up-to-date atlas encompasses more than three hundred thematic maps, along with more than six hundred color photographs, illustrations, charts, and graphs, that document the world's natural and cultural wonders.

Mind Map Mastery Tony Buzan,2018-03-13 Discover how you can use mind mapping to get organized, improve your memory, plan your business strategy, and much more—from the original creator of this revolutionary thinking tool For the past five decades, Tony Buzan has been at the leading edge of learning and educational research with his revolutionary Mind Map technique. With Mind Map Mastery, he has distilled these years of global research into the clearest and most powerful instructional work available on the Mind Map technique. Tony Buzan's Mind Map technique has gathered amazing praise and an enormous worldwide following over the last few decades—but as with any very successful idea, there have been many sub-standard imitators. With Mind Map Mastery, Tony Buzan re-establishes the essential concepts that are the core of the Mind Map with a clarity and practicality unrivalled by other books. If you are looking to improve your memory, plan your business strategy, become more organized, study for an exam or plan out your future, this is the book for you. With a clarity and depth that far exceeds any other book on the subject, it includes: • The history of the development of the Mind Map • An explanation of

what makes a Mind Map (and what isn't a Mind Map) • Why the Mind Map technique is such a powerful tool • Illustrated step-by-step techniques for Mind Map development • How to deal with Mind Maps that have "gone wrong" Developed both for those new to the Mind Map concept as well as more experienced users who would like to revise and expand their expertise, Mind Map Mastery is the one Mind Mapping book needed on the shelf of every student and businessperson across the world.
