Géométrie des pavages : De la conception à la réalisation sur ordinateur AUDIBERT Pierre, 2013-02-01 Des fresques de l'Antiquité romaine aux pavages de Durer et Kepler, des mosaïques de l'art arabo-persan aux pavages de Penrose, l'art décoratif est illuminé de motifs géométriques foisonnants. Soumis à des régularités lancinantes ou à des symétries kaléidoscopiques, ils forment un trait d'union privilégié entre l'art et les mathématiques. S'adressant aux enseignants et étudiants en mathématiques ou informatique comme aux amateurs d'art, *Géométrie des pavages* propose différentes clés permettant de mieux comprendre la beauté cachée des formes, mais également de devenir les artisans constructeurs des pavages sur ordinateur. Il détaille les trois types de conception géométrique (surface plane, sphérique ou géométrie non euclidienne hyperbolique) et les concepts théoriques qui les fondent. La compréhension des mécanismes internes de la fabrication des pavages permet ainsi d'accéder aux programmes de réalisation sur ordinateur, donnant accès à des visualisations instantanées et à un grand nombre de variations possibles.

L. E. J. Brouwer Collected Works Hans Freudenthal, 2014-05-12 L. E. J. Brouwer Collected Works, Volume 2: Geometry, Analysis, Topology, and Mechanics focuses on the contributions and principles of Brouwer on geometry, topology, analysis, and mechanics, including non-Euclidean spaces, integrals, and surfaces. The publication first ponders on non-Euclidean spaces and integral theorems, Lie groups, and plane transition theorem. Discussions focus on remarks on multiple integrals, force field of the non-Euclidean spaces with negative curvature, difference quotients and differential quotients, characterization of the Euclidean and non-Euclidean motion groups, and continuous one-one transformations of surfaces in themselves. The book also takes a look at vector fields on surfaces and new methods in topology, including continuous vector distributions on surfaces and orthogonal trajectories of the orbits of a one parameter plane projective group. The book then ponders on mechanics and topology of surfaces, as well as the motion of a particle on the bottom of a rotating vessel under the influence of gravitational force. The publication is a valuable reference for researchers interested in geometry, topology, analysis, and mechanics.

Thabit ibn Qurra Roshdi Rashed, 2009-12-15 Thabit ibn Qurra (826–901) was one of history's most original thinkers and displayed expertise in the most difficult disciplines of this time: geometry, number theory, and astronomy as well as ontology, physics, and metaphysics. Approximately a dozen of this shorter mathematical and philosophical writings are collected in this volume. Critically edited with accompanying commentary, these writings show how Thabit Ibn Qurra developed and reconceived the intellectual inheritance of ancient Greece in all areas of knowledge.

The Topology of Fibre Bundles. (PMS-14), Volume 14 Norman Steenrod, 2016-06-02 Fibre bundles, now an integral part of differential geometry, are also of great importance in modern physics--such as in gauge theory. This book, a succinct introduction to the subject by renowned mathematician Norman Steenrod, was the first to present the subject systematically. It begins with a general introduction to bundles, including such topics as differentiable manifolds and covering spaces. The author then provides brief surveys of advanced topics, such as homotopy theory and cohomology theory, before using them to study further properties of fibre bundles. The result is a classic and timeless work of great utility that will appeal to serious mathematicians and theoretical physicists alike.

Proceedings of the Fifth International Congress on Mathematical Education CARASS, 2013-03-14 International Congresses on Mathematical Education (ICMEs), under the auspices of the International Commission on Mathematical Instruction, are held every four years. Previous Congresses have been held in France (Lyons), England (Exeter), the Federal Republic of Germany (Karlsruhe), and the United States of America (Berkeley). The Fifth International Congress on Mathematical Education (ICME 5) was held in Adelaide, Australia, from August 24-30, 1984. More than 1800 participants from over 70 countries participated in the Congress, while some additional 200 people attended social functions and excursions. The program for ICME 5 was planned and structured by an International Program Committee, and implemented by the National Program Committee in Australia. For the main body of the program, Chief Organisers, assisted by Australian Coordinators, were invited to plan and prepare the individual components of the program which addressed a wide range of topics and interest areas. Each of these teams involved many individuals from around the world in the detailed planning and preparation of the working sessions for their area of program responsibility. For the actual working sessions at the Congress, the smallest group had some 60 members, while the largest had well over 300. In addition to the working sessions, there were three major plenary addresses, several specially invited presentations, and over 420 individual papers in the form of short communications, either as posters or brief talks.

Fixed Point Theory Andrzej Granas, James Dugundji, 2013-03-09 The theory of Fixed Points is one of the most powerful tools of modern mathematics. This book contains a clear, detailed and well-organized presentation of the major results, together with an entertaining set of historical notes and an extensive bibliography describing further developments and applications. From the reviews: I recommend this excellent volume on fixed point theory to anyone interested in this core subject of nonlinear analysis. --MATHEMATICAL REVIEWS

B. Webb, Professor Dr. H. Raether, Dr. G. R. Ringo, 2012-12-06 107 In this way the absolute values of the structure factors may be found, not the phases (6. 8). The problem to find these phases is the phase problem. The present article will treat the following topics. At first the description of the ideal crystal will be given in Chap. B. The underlying principles of this description are the concepts of reciprocal lattice, FOURIER synthesis and symmetry. The evaluation of the intensity will then follow in Chap. C and D. Chap. E is concerned with the phase problem and related topics. Though this article treats the analysis of crystal structures, the fundamental concepts for other structures will here be found too. But these topics, and the experimental methods, will find their place

elsewhere . B. Description of the crystalline state. I. Lattice theory. a) The direct lattice. 8. Introduction. In Sect. 3, a description of the ideal crystal was given: The space, occupied by a crystal, is divided into congruent parallelepipeds, each with the same orientation. This parallelepiped is defined by the three basic vectors, a, band c, drawn from an origin 0 (Fig. 2), and is called the primitive cell. This cell is filled with atoms (or ions), and the same configuration of atoms is repeated in space. It has been aptly called a three-dimensional wallpaper, as on a wallpaper the same pattern is repeated again and again.
