The Climate and Weather of Australia Henry Ambrose Hunt,Thomas Griffith Taylor,E. T. Quayle,Australia. Bureau of Meteorology,1913

The Weather Obsession Lawrie Zion,2018-02-08 We have come a long way since the days when weather information could only be found in the back pages of newspapers. The Weather Obsession takes the temperature of modern weather media and investigates how it has fuelled our fascination with all things climatic. Weather information now pervades everything from our mobile devices to online news and social media, while the Bureau of Meteorology is a daily destination for millions of us. What has made weather so much more than a mere talking point? What happens when this data becomes big business? And what is at stake when it comes to how the media frames our understanding of the relationship between extreme weather and climate change? The Weather Obsession lifts the lid on our insatiable appetite for meteorological media and shows that while we might not have stopped worrying about the forecast, almost all of us have learnt to love the BOM.

Flood Early Warning Systems Daniela Molinari, Scira Menoni, Francesco Ballio, 2013 Presenting the results of an ambitious research activity this book intends to understand why Early Warning Systems (EWSs) fail. However, from the beginning, the objective turned out to be challenging; first, because, so far, there is not a shared understanding of what an EWS is (among both researchers and practitioners communities); second, as a consequence, because it is equally unclear when an EWS can be considered successful or not. Due to this, the research needed first to face some “open questions” instead of going straight to the point under investigation. Specifically, it was first necessary to define EWS, identify its components and functions, peculiarities, and weak points. Only at that point, a first attempt to evaluate EWS performance was possible. *Flood Early Warning Systems Performance* is organised according to the conceptual steps required by the research. In part I the “open questions” about the definition and the role of EWSs are handled, the aim being the identification of how to evaluate their effectiveness/performance. Part II focuses on the real aim of the research, providing concepts and tools to assess EWS performance; suggested tools are also implemented in a case study to describe how they can be applied in practice. Focusing specifically on the topic of flood risk in mountainous regions, the book can be viewed as a sort of manual for EWS designers, managers, and users. It is organised into different independent sections which will appeal both to experts as well as those with an interest in the subject. Most of results can also be exported to other hazards.

The Weather and Climate of Australia and New Zealand Andrew P. Sturman, Nigel J. Tapper, 2006 Comprehensively revised and updated in its second edition, *The Weather and Climate of Australia and New Zealand* provides an introduction to the basic concepts underlying the science of the atmosphere from a Southern Hemisphere perspective, and establishes the global setting within which the weather and climate of Australia and New Zealand operate. Only book with a Southern Hemisphere focus that is suitable for meteorology and climatology students in Australia and New Zealand Incorporates new material published in international literature since the publication of the first edition Caters specifically for students who are just developing an interest in the subject, as well as for those undertaking research that requires a good basic understanding of atmospheric processes and their operation in this region Explains the weather systems responsible for day to day variability experienced across the area, including tropical and mid-latitude phenomena, and approaches to weather forecasting Examines climate change and variability in depth, including a summary of evidence of past climates, as well as discussion of more recent and possible future climate changes Includes an extensive glossary to assist the new reader with terminology specific to meteorology and climatology Contains useful chapter-by-chapter further reading sections

The Australian Weather Book Keith Colls, Richard Whitaker, 1990

Warning Sophie Cunningham, 2014-07-23 Warning is the definitive account of one of the most frightening extreme weather events our country has ever seen. When Cyclone Tracy swept down on Darwin at Christmas 1974, the weather became not just a living thing but a killer. Tracy destroyed an entire city, left seventy-one people dead and ripped the heart out of Australia's season of goodwill. For the fortieth anniversary of the nation's most iconic natural disaster, Sophie Cunningham has gone back to the eyewitness accounts of those who lived through the devastation, and those who faced the heartbreaking clean-up and the back-breaking rebuilding. From the quiet stirring of the service-station bunting that heralded the catastrophe to the wholesale slaughter of the dogs that followed it, Cunningham brings to the tale a novelist's eye for detail and an exhilarating narrative drive. And a sober appraisal of what Tracy means to us now, as we face more - and more destructive - extreme weather with every year that passes. Compulsively readable and undeniably moving, Warning is the essential non-fiction book of 2014. Sophie Cunningham is the author of two novels, Geography (2004) and Bird (2008) and the non-fiction Melbourne (UNSW Press, 2011). She is a former editor of Meanjin and was until recently the chair of the Australia Council's Literature Board. 'The strength and beauty of this book is the way it delves into the lives of the people affected and tries to understand their responses, their courage and their failings. Cunningham argues that these kinds of natural disasters are going to become more prevalent as the effects of climate change make extreme weather conditions more likely. This book is no polemic: it's a gripping and visceral tale.' Mark Rubbo, Readings 'Highly accomplished...compelling.' Age/SMH 'Cunningham has pieced together a pacy and energetic insight into the build up, experience and aftermath of the cyclone...It's a great read and, given the subject, it is strangely hopeful.' Big Issue 'Along with an eye for good stories and a knack for telling them, Sophie Cunningham brings a contextualising political intelligence. What she is interested in is how natural disasters are also social and political events, and the period details amount to more than the sideburns and lairy shirts...What happens in natural disasters depends on how communities work; the effects and aftermaths of those disasters are in fact man-made. As the future promises more and more extreme weather events whose causes as well as effects are anthropogenic, Cunningham's gripping book contributes to new ways of thinking about them.' Sunday Age/Sun Herald 'Sophie Cunningham has done a tremendous job in gathering the voices - from then and now - of those who were there and during the clean-up [of Cyclone Tracy]. The result is vivid storytelling, gripping from beginning to end.' Townsville Bulletin/Cairns Post 'Warning: The Story of Cyclone Tracy is a brilliant book and on the anniversary of such devastation, it is a timely reminder to cherish everything you have in your life because in one night it could all be blown away.' Flood Forecasting Thomas E Adams, Thomas C. Pagano, 2016-04-04 Flood Forecasting: A Global Perspective describes flood forecast systems and operations as they currently exist at national and regional centers around the globe, focusing on the technical aspects of flood forecast systems. This book includes the details of data flow, what data is used, quality control, the hydrologic and hydraulic models used, and the unique problems of each country or system, such as glacial dam failures, ice jams, sparse data, and ephemeral streams and rivers. Each chapter describes the system, including details about its strengths and weaknesses, and covers lessons learned. This helpful resource facilitates sharing knowledge that will lead to improvements of existing systems and provides a valuable reference to those wishing to develop new forecast systems by drawing on best practices. Covers global systems allowing readers to see a worldwide perspective with different approaches used by existing flood forecast systems Provides historical coverage allowing readers to understand why forecast systems have developed as they have and to see how specific systems have dealt with common problems encountered Presents a vision of what appears to be the future of hydrologic forecasting and difficulties facing hydrologic

forecasting Provides a helpful resource to facilitate improvements to existing systems based on a best practices approach

Windows on Meteorology Eric K. Webb, 1997 *Windows on Meteorology: Australian Perspective* answers a host of questions about Australia's weather and climate, and explains the underlying causes of floods, droughts and cyclones. Vivid accounts of dust storms and the mysteries of the 'morning glory' cloud lines are revealed. The book highlights the perception in Aboriginal culture of the connection between seasons and natural cycles, through aspects of Aboriginal mythology and language, and contains a unique Aboriginal seasonal calendar. The influence of climate on Australia's wildlife is illustrated with fascinating accounts of the evolution of burrowing frogs, shrimps and desert kangaroos. A history of Australian meteorology from early European settlement onwards, covers subjects such as a nineteenth century view of the links between climate and health, the development of instruments, cloud physics research and the Southern Oscillation connection. The final chapters bring the reader up to date with the most recent technical developments in research and applications such as satellite remote sensing, radar and fast response instruments.
