Places of Invention Arthur P. Molella, Anna Karvellas, 2015-06-30 The companion book to an upcoming museum exhibition of the same name, Places of Invention seeks to answer timely questions about the nature of invention and innovation: What is it about some places that sparks invention and innovation? Is it simply being at the right place at the right time, or is it more than that? How does “place”—whether physical, social, or cultural—support, constrain, and shape innovation? Why does invention flourish in one spot but struggle in another, even very similar location? In short: Why there? Why then? Places of Invention frames current and historic conversation on the relationship between place and creativity, citing extensive scholarship in the area and two decades of investigation and study from the National Museum of American History’s Lemelson Center for the Study of Invention and Innovation. The book is built around six place case studies: Hartford, CT, late 1800s; Hollywood, CA, 1930s; Medical Alley, MN, 1950s; Bronx, NY, 1970s; Silicon Valley, CA, 1970s–1980s; and Fort Collins, CO, 2010s. Interspersed with these case studies are dispatches from three “learning labs” detailing Smithsonian Affiliate museums’ work using Places of Invention as a model for documenting local invention and innovation. Written by exhibition curators, each part of the book focuses on the central thesis that invention is everywhere and fueled by unique combinations of creative people, ready resources, and inspiring surroundings. Like the locations it explores, Places of Invention shows how the history of invention can be a transformative lens for understanding local history and cultivating creativity on scales of place ranging from the personal to the national and beyond.

Building Inclusive Ethical Cultures in STEM Elisabeth Hildt,

What I Did Not Learn at IIT-B Rajeev Agarwal, 2017-08-29 Every year graduating engineers are told that they are destined for success. But what are the habits and behaviours that actually lead to success? In What I did not learn at IIT, Rajeev Agarwal, founder and CEO of MAQ Software, has distilled decades of life experience into one accessible and informative guide. In simple language, he explains the success techniques he applied and what worked for him. Encouraging graduates to look at their careers over a forty-year span, Rajeev explains that successful people choose to be passionate about every job they have. Using a skillful combination of personal stories and checklists, What I did not learn at IIT provides students-young and old-with a roadmap for success.

Professional Windows Embedded Compact 7 Samuel Phung, David Jones, Thierry Joubert, 2011-08-15 Learn to program an array of customized devices and solutions As a compact, highly efficient, scalable operating system, Windows Embedded Compact 7 (WEC7) is one of the best options for developing a new generation of network-enabled, media-rich, and service-oriented devices. This in-depth resource takes you through the benefits and capabilities of WEC7 so that you can start using this performance development platform today. Divided into several major sections, the book begins with an introduction and then moves on to coverage of OS design, application development, advanced application development, how to deploy WEC7 devices, and more. Examines the benefits of Windows Embedded Compact 7 (WEC7) Reviews the various elements of OS design, including configuring and building a customized OS runtime image, using debugging and remote tools, and more Explains how to develop native code applications with Visual Studio 2010, develop database applications with SQL server compact, and use the application deployment option Discusses how to deploy a WEC device, use the boot loader, launch WEC using BIOSLoader, and deploy a WEC power toy If you're interested in learning more about embedded development or you're seeking a higher performance development platform, then this is the book for you.

Reinventing Project-Based Learning Suzie Boss, Jane Krauss, 2022-08-29 This updated edition of the bestselling Reinventing Project-Based Learning offers examples of the latest tools, assessment strategies and promising practices poised to shape education in the future. This popular ISTE title follows the arc of a project, providing guided opportunities to direct and reflect educators’ own learning and professional development. This book shows how to design authentic projects that make the most of available and emerging technologies. This new edition: • Provides examples of how to merge personalized learning, flipped classrooms, and PBL for effective teaching and learning. • Includes coverage of computational thinking and coding, demonstrating ways to develop new approaches to solving problems as well as new forms of expression. • Discusses PBL as an equity consideration, with opportunities for personalization and empowerment, addressing issues of social justice and closing the achievement gap. Includes coverage on new trends like augmented and virtual reality; and new and updated Spotlights from educators featured in the first edition and others. • Features deeper focus on Gold Standard and High Quality PBL, the P21 Framework, and ISTE Standards for Students and Educators. With this book, teachers will come to appreciate the importance of problem-finding and problem-posing — thoughtful activity that needs to precede problem solving in any context. The companion jump start guide based on this book is Project-Based Learning: Strategies and Tools for Creating Authentic Experiences.

Security-Related Advanced Technologies in Critical Infrastructure Protection Tünde Anna Kovács, Zoltán Nyikes, Igor Fürstner, 2022-09-05 This book collects the latest research results on security-related advanced technologies. The chapters contain relevant and interesting topics from numerous research. Data science and artificial intelligence research nowadays one of the most important topics for the industry and the security sectors. The autonomy and counter-autonomy research topic are also very interesting. Autonomous cars have become a part of the common days, but their safe and secure application is not assured. The research results in this field want to support and assure safe and secure autonomous applications in our quotidian life. Also, the safe and secure robotics in the industries and the defence assure a high standard of living and the given research results in this area can use to increase it. The researchers work on it and publish the results that can be interesting for the other researchers and the innovators, but also the industrial part members. The researchers work on it and publish the results that can be interesting for the other researchers and the innovators, but also the industrial part members. Communication is a part of our life, but the communication systems mesh all around the world. Communication is the basis of modern life because without it life stop. One other interesting and very important research area is the material sciences. Virtual life cannot exist without hardware and materials. The new technical applications require new materials, that can suffice the mechanical and physical, chemical properties demand. Nowadays a common requirement of the materials the high strength and lightweight. Researchers want to serve the industrial requests and innovate new composite materials or increase the properties of the material through a new technological process. The authors publish the latest results of the security-related research area including the newest innovations and technologies which rise the interest of the defence and the modern industries even the interest of other researchers.

Informatics Education - Supporting Computational Thinking Roland Mittermeir, Maciej M. Syslo, 2008-06-27 Informatics Education – Supporting Computational Thinking contains papers presented at the Third International Conference on Informatics in Secondary Schools – Evolution and Perspective, ISSEP 2008, held in July 2008 in Torun, Poland. As with the proceedings of the two previous ISSEP conferences (2005 in Klagfurt, Austria, and 2006 in Vilnius, Lithuania), the papers presented in this volume address issues of informatics education transcending national boundaries and, therefore, transcending differences in the various national legislation and organization of the educational system. Observing these issues, one might notice a trend. The proceedings of the First ISSEP were termed From Computer Literacy to Informatics Fundamentals [1]. There, broad room was given to general education in ICT. The ECDL, the European Computer Driving License, propagated since the late 1990s, had penetrated school at this time already on a broad scale and teachers, parents, as well as pupils were rather happy with this situation. Teachers had material that had a clear scope, was relatively easy to teach, and especially easy to examine. Parents had the assurance that their children learn “modern and relevant stuff,” and for kids the computer was sufficiently modern so that anything that had to do with computers was considered to be attractive. Moreover, the difficulties of programming marking the early days of informatics education in school seemed no longer relevant. Some colleagues had a more distant vision though.

America Goes Green [3 volumes] Kim Kennedy White,2012-11-12 This three-volume encyclopedia explores the evolution of green ideology and eco-friendly practices in contemporary American culture, ranging from the creation of regional and national guidelines for green living to the publication of an increasing number of environmental blogs written from the layperson's perspective. Evidence of humanity's detrimental impact on the environment is mounting. As Americans, we are confronted daily with news stories, blogs, and social media commentary about the necessity of practicing green behaviors to offset environmental damage. This essential reference is a fascinating review of the issues surrounding green living, including the impact of this lifestyle on Americans' time and money, the information needed to adhere to green principles in the 21st century, and case studies and examples of successful implementation. *America Goes Green: An Encyclopedia of Eco-Friendly Culture in the United States* examines this gripping topic through 3 volumes organized by A-Z entries across 11 themes; state-by-state essays grouped by region; and references including primary source documents, bibliography, glossary, and green resources. This timely encyclopedia explores the development of an eco-friendly culture in America, and entries present the debates, viewpoints, and challenges of green living.

Persistent Forecasting of Disruptive Technologies—"Report 2 National Research Council,Division on Engineering and Physical Sciences,Committee on Forecasting Future Disruptive Technologies,2010-08-02 The term disruptive technology describes a technology that results in a sudden change affecting already established technologies or markets. Disruptive technologies cause one or more discontinuities in the normal evolutionary life cycle of technology. This may lead to an unexpected destabilization of an older technology order and an opportunity for new competitors to displace incumbents. Frequently cited examples include digital photography and desktop publishing. The first report of the series, *Persistent Forecasting of Disruptive Technologies*, discussed how technology forecasts were historically made, assessed various existing forecasting systems, and identified desirable attributes of a next-generation persistent long-term forecasting system for disruptive technologies. This second book attempts to sketch out high-level forecasting system designs. In addition, the book provides further evaluation of the system attributes defined in the first report, and evidence of the feasibility of creating a system with those attributes. Together, the reports are intended to help the Department of Defense and the intelligence community identify and develop a forecasting system that will assist in detecting and tracking global technology trends, producing persistent long-term forecasts of disruptive technologies, and characterizing their potential impact on future U.S. warfighting and homeland defense capabilities.

The Complete Guide to Using Google in Libraries Carol Smallwood,2015-03-06 From the Forward by Michael Lesk: Google has now developed services far beyond text search. Google software will translate languages and support collaborative writing. The chapters in this book look at many Google services, from music to finance, and describe how they can be used by students and other library users. Going beyond information resources, there are now successful collaboration services available from Google and others. You can make conference calls with video and shared screens using Google Hangouts, Writing documents with small numbers of colleagues often involved delays while each author in sequence took over the writing and made edits. Today Google Docs enables multiple people to edit the same document at once. An ingenious use of color lets each participant watch in real time as the other participants edit, and keeps track of who is doing what. If the goal is to create a website rather than to write a report, Google Sites is now one of the most popular platforms. Google is also involved in social networking, with services such as Google+ Other tools view social developments over time and space. The Google Trends service, for example, will show you when and where people are searching for topics. Not surprisingly, searches for "swimwear" peak in June and searches for "snowmobile" peak in January. *The Complete Guide to Using Google in Libraries, Volume 2: Research, User Applications, and Networking* has 30 chapters divided into four parts: Research, User Applications, Networking, Searching. The contributors are practitioners who use the services they write about and they provide how-to advice that will help public, school, academic, and special librarians; library consultants, LIS faculty and students, and technology professionals.

The American-style University at Large Kathryn L. Kleypas,James I. McDougall,2012 *The American-Style University at Large: Transplants, Outposts, and the Globalization of Higher Education* is an edited collection by Kathryn L. Kleypas and James McDougall that analyzes the recent expansion of American universities overseas as well as the emergence of American-style universities in Europe, Asia, and Africa. The contributors examine the various ways that American models of higher learning have become instituted around the world and explore ways that these new configurations help to define the university as a force that organizes, develops, and controls methods of education, knowledge, power, and culture.

2015 U.S. Higher Education Faculty Awards, Vol. 2 Faculty Awards,2022-09-01 Created by professors for professors, the Faculty Awards compendium is the first and only university awards program in the United States based on faculty peer evaluations. The Faculty Awards series recognizes and rewards outstanding faculty members at colleges and universities across the United States.
