What's New Swankey Ben,2008-06-13 In this unique and extraordinary memoir, Ben Swankey sums up a lifetime of labour and socialist activism. He begins with a remarkable evocation of his Saskatchewan childhood in the farming community of Herbert. While still a teenager, Swankey hitchhiked and rode the rails to Vancouver, where he came in contact with the unemployed movement and made a lifelong commitment to socialism. This decision brought him into the Young Communist League and the Communist Party as an organizer in the massive protests that shook Alberta during the Depression, particularly the Edmonton Hunger March in 1932. He mobilized support for the On to Ottawa Trek, worked with Crow's Nest miners and ultimately was interned during the Second World War for his political beliefs. What's New gives unique first person accounts of these remarkable periods in Canadian history. After service in the Canadian artillery following his release from internment, Swankey became leader of the Labour-Progressive Party in Alberta before moving to Burnaby, BC with his family, in 1957. Here he began an entirely new career as a labour writer and policy analyst. His long, close friendship with Harry Rankin, BC's crusading labour lawyer and long-time city councillor, gave him an unparalleled perspective on the labour and political life of the province. Swankey remained active into his 80s, working with the Council of Canadians and BC seniors' organizations to defend and expand our Medicare system. This is the life story of a unique Canadian.

In the past 15 years major steps have been made from visual analysis to quantitative analysis, from planar imaging to tomographic imaging, from detection of disease to prognosis, and from separate evaluations of perfusion, metabolism, and function to an integrated assessment of myocardial viability. In recent years many more advances have been made in cardiovascular nuclear imaging, such as the development of new imaging agents, reevaluation of existing procedures, and new clinical applications. This book describes the most recent developments in nuclear cardiology and also addresses new contrast agents in MRI. What's New in Cardiac Imaging will assist the clinical cardiologist, the cardiology fellow, the nuclear medicine physician, and the radiologist in understanding the most recent achievements in clinical cardiovascular nuclear imaging.

**What’s New in Anesthesiology** T.H. Stanley,1988-01-31 Theodore H. Stanley, M. D. What's New in, Anesthesiology in 1988 contains the Refresher Course manuscripts of the presentations of the 33rd Annual Postgraduate Course in Anesthesiology which took place at the Marriott Hotel Convention Center in Salt Lake City, Utah, February 19-23, 1988. The chapters reflect new data, ideas and concepts within the general framework of most recent developments in evaluation and monitoring cardiac function before, during and after surgery, new anesthetics and their actions on the heart and peripheral vasculature, and other organ systems, metabolism and elimination of anesthetics and anesthetic adjuvants, and recent developments in the anesthetic management of patients with congenital heart disease, renal and pulmonary dysfunction, and diabetes insipidus. In addition, there are chapters on new developments in obstetrics, regional anesthesia, and anesthetic management of the newborn. The purposes of the textbook are to 1) act as a reference for the anesthesio logists attending the meeting, and,2) serve as a vehicle to bring many of the latest concepts in anesthesiology to others within a short time of the formal presentation. Each chapter is a brief but sharply focused glimpse of the interests in anesthesia expressed at the conference. This book and its chapters should not be considered complete treatises on the subjects addressed but rather attempts to summarize the most salient points. This textbook is the sixth in a continuing series documenting the proceedings of the Postgraduate Course in Salt Lake City.
