Best Maps Win Jzikah Squier Ball,2020-09-11 They say the side with the best maps wins and history is written by the victors. This book holds over 72 of the very best Maps by Jzikah; they are serious study-maps drawn by a preschool teacher who fights bad guys with her sharpie. Most maps are based on books, videos or articles written by investigative journalists, academics or thought leaders. Bushmanders and Bullwinkles Mark Monmonier,2001-04-15 For years Mark Monmonier, a prose stylist of no mean ability or charm according to the Washington Post, has delighted readers with his insightful understanding of cartography as an art and technology that is both deceptive and revealing. Now he turns his focus to the story of political cartography and the redrawing of congressional districts. His title Bushmanders and Bullwinkles combines gerrymander with the surname of the president who actively tolerated racial gerrymandering and draws attention to the ridiculously shaped congressional districts that evoke the antlers of the moose who shared the cartoon spotlight with Rocky the Flying Squirrel. Written from the perspective of a cartographer rather than a political scientist, Bushmanders and Bullwinkles examines the political tales maps tell when votes and power are at stake. Monmonier shows how redistricting committees carve out favorable election districts for themselves and their allies; how disgruntled politicians use shape to challenge alleged racial gerrymanders; and how geographic information systems can make reapportionment a controversial process with outrageous products. He also explores controversies over the proper roles of natural boundaries, media maps, census enumeration, and ethnic identity. Raising important questions about Supreme Court decisions in regulating redistricting, Monmonier asks if the focus on form rather than function may be little more than a distraction from larger issues like election reform. Characterized by the same wit and clarity as Monmonier's previous books, Bushmanders and Bullwinkles is essential background for understanding what might prove the most contentious political debate of the new decade.

Networks and Systems Management Iosif G. Ghetie,2012-12-06 The deployment of communications networks and distributed computing systems requires the use of open, standards-based, integrated management systems. During the last five years, the overall industry effort to develop, enhance, and integrate management systems has crystallized in the concept of management platforms. Management platforms are software systems which provide open, multi vendor, multiprotocol distributed management services. They allow multiple management applications to run over core platform services which constitute the essential part of the management platform framework. This book provides a comprehensive analysis of the features and technical characteristics of distributed management platforms by examining both qualitative and quantitative management capabilities required by each management platform service. The analysis covers the management platform run-time environment, the operational aspects of using management platforms, the development environment, which consists of software toolkits that are used to build management applications, the implementation environment, which deals with testing interoperability aspects of using management platforms, and of course the distributed applications services which platforms make available to management applications. Finally, the analysis covers the capabilities of several management applications, either generic or specific to devices or

resources which run on top of management platforms.

Now he turns his focus to the story of political cartography and the redrawing of congressional districts. His title *Bushmanders and Bullwinkles* combines gerrymander with the surname of the president who actively tolerated racial gerrymandering and draws attention to the ridiculously shaped congressional districts that evoke the antlers of the moose who shared the cartoon spotlight with Rocky the Flying Squirrel. Written from the perspective of a cartographer rather than a political scientist, *Bushmanders and Bullwinkles* examines the political tales maps tell when votes and power are at stake. Monmonier shows how redistricting committees carve out favorable election districts for themselves and their allies; how disgruntled politicians use shape to challenge alleged racial gerrymanders; and how geographic information systems can make reapportionment a controversial process with outrageous products. Strategy Maps Robert S. Kaplan, David P. Norton, 2003-12-16 More than a decade ago, Robert S. Kaplan and David P. Norton introduced the Balanced Scorecard, a revolutionary performance measurement system that allowed organizations to quantify intangible assets such as people, information, and customer relationships. Then, in *The Strategy-Focused Organization*, Kaplan and Norton showed how organizations achieved breakthrough performance with a management system that put the Balanced Scorecard into action. Now, using their ongoing research with hundreds of Balanced Scorecard adopters across the globe, the authors have created a powerful new tool--the strategy map--that enables companies to describe the links between intangible assets and value creation with a clarity and precision never before possible. Kaplan and Norton argue that the most critical aspect of strategy--implementing it in a way that ensures sustained value creation--depends on managing four key internal processes: operations, customer relationships, innovation, and regulatory and social processes. The authors show how companies can use strategy maps to link those processes to desired outcomes; evaluate, measure, and improve the processes most critical to success; and target investments in human, informational, and organizational capital. Providing a visual aha! for executives everywhere who can't figure out why their strategy isn't working, *Strategy Maps* is a blueprint any organization can follow to align processes, people, and information technology for superior performance.
