Operational Experiences with Flexible Transit Services David Koffman,Transit Cooperative Research Program,2004 TRB's Transit Cooperative Research Program (TCRP) Synthesis 53: Operational Experiences with Flexible Transit Services examines transit agency experiences with flexible transit services, including all types of hybrid services that are not pure demand-responsive (including dial-a-ride and Americans with Disabilities Act paratransit) or fixed-route services, but that fall somewhere in between those traditional service models.

The Streetcars of Winnipeg – Our Forgotten Heritage Brian K. Darragh,2015-03-05 On the 19th of September, 2015 it will be 60 years since the last streetcar made its final run through Winnipeg's well known Portage and Main. Even our oldest daughter in her mid fifties never had a chance to see a Winnipeg streetcar operating, and naturally her children and grandchildren haven't either. What an experience they have missed I operated the streetcars for the final 17 months of existence here, April

1954 to September 1955. I was the third youngest streetcar operator at that time. I turned 86 years old in November 2014 so the remaining half dozen operators will be in their mid nineties now. I have tried to capture the experience that the 73 years of streetcar service provided to Winnipeg and the surrounding towns. From the start of the horse cars in 1882 where the drivers were paid 12 cents an hour, to the beginning of electric streetcars in January 1891, this book describes with the aid of numerous pictures the essence of the transportation experience of those times. The streetcars ran for approximately 35 years before the first four buses came in 1918. In that time the streetcars supported the growth of the city to 150,000 people by 1912 becoming the third largest city in Canada. Writing this book has brought back many fond memories of those days. The last Winnipeg streetcar book was written by the late John Baker 32 years ago. It's about time for another....

Advances in Intelligent Networking and Collaborative Systems Leonard Barolli, Kin Fun Li, Hiroyoshi

Miwa, 2020-08-20 This book aims to provide the latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to intelligent social networks and collaborative systems, intelligent networking systems, mobile collaborative systems, secure intelligent cloud systems, etc., as well as to reveal synergies among various paradigms in such a multi-disciplinary field intelligent collaborative systems. With the fast development of the Internet, we are experiencing a shift from the traditional sharing of information and applications as the main purpose of the Web to an emergent paradigm, which locates people at the very centre of networks and exploits the value of people's connections, relations and collaboration. Social networks are also playing a major role in the dynamics and structure of intelligent Web-based networking and collaborative systems. Virtual campuses, virtual communities and organizations strongly leverage intelligent networking and collaborative systems by a great variety of formal and informal electronic relations, such as business-to-business, peer-to-peer and many types of online

collaborative learning interactions, including the emerging e-learning systems. This has resulted in entangled systems that need to be managed efficiently and in an autonomous way. In addition, latest and powerful technologies based on grid and wireless infrastructure as well as cloud computing are currently enhancing collaborative and networking applications as a great deal but also facing new issues and challenges. The principal purpose of the research and development community is to stimulate research that will lead to the creation of responsive environments for networking and, at longer-term, the development of adaptive, secure, mobile and intuitive intelligent systems for collaborative work and learning.

Keeping Canada Running G. Bruce Doern, Christopher Stoney, Robert Hilton, 2021-09-29 The federal government's promises to build back better and build back green highlight opportunities to reimagine Canadian infrastructure. In this groundbreaking study, authors Bruce Doern, Christopher Stoney, and Robert Hilton provide the first comprehensive overview of Canadian infrastructure policy, examining the impact and implications of the COVID-19 pandemic and rapid technological change as Canada looks to recover and rebuild. Covering more than fifty years across many sectors, the authors identify numerous challenges that have contributed to Canada's growing infrastructure deficit and suboptimal outcomes including political interference in the choice of infrastructure projects; challenges for multilevel governance such as distortion of local priorities, blurred accountability, and unsustainable maintenance costs for municipalities; the growing reliance on public-private partnerships that limit transparency and public scrutiny; and increased corruption associated with infrastructure projects. Transforming infrastructure is notoriously difficult yet vital at a time of rapid technological change. It is estimated that 75 percent of the infrastructure that will exist in 2050 does not exist today. This makes it

crucial that Canada invest in future-proof infrastructure with the capacity to facilitate economic growth and the expansion of urban centres, mitigate and adapt to the impacts of climate change, and ensure resilience in response to crises and disasters. Keeping Canada Running offers a timely assessment of these issues, Canada's COVID-19 response, and the potential contribution of the newly launched Canadian Infrastructure Bank.
