Golden, 2008-02-05 With thirty revised and updated chapters the new edition of this classic text brings benefits to professors and students alike who will find new sections on many topics concerning modern food microbiology. This authoritative book builds on the trusted and established sections on food preservation by modified atmosphere, high pressure and pulsed electric field processing. In-depth references, appendixes, illustrations, index and thorough updating of taxonomies make this an essential for every food scientist.

The Creation of Sustainable Value Guy McManus, Marcus Powe, 2009 To most people the term 'value' only relates to money. Value is much more than this and often occurs at three different levels - the individual, the organisation and the community. Creating sustainable value is the process of linking these three levels. The 'glue' that holds them together comprises the creative mindset and the tools of innovation, and when linked they can create enduring sustainable value.--P. 4.

Science and Engineering of Chinese Liquor (Baijiu) Yan Xu,2023-01-27 This book provides a cutting-edge scientific overview of Chinese liquor, also known as Baijiu. Chinese liquor is one of the world's most ancient fermented alcoholic beverages. Fermented foods and beverages are consumed worldwide as an indispensable constituent in our daily life. However, most fermented foods rely on traditional techniques with limited known scientific knowledge. These indigenous processes are typically empirical without scientifically-based control and technological insights. The book analyses Chinese liquor processing on the three most important disciplines of fermented foods: process technology/engineering, flavor chemistry, and microbiology. It also addresses the perspectives and future research needs associated with spontaneous fermented foods. This book offers a deep understanding of the science of Chinese liquor production to students, researchers, and related practitioners both in the academic and the industry. It would also benefit many other fields of fermented foods for their optimization, standardization, and modernization.
