**A History of the World in Twelve Maps** Jerry Brotton, 2012 Throughout history, maps have shaped our view of the world and our place in it. In this scintillating book, Jerry Brotton argues that far from being purely scientific objects, maps of the world are unavoidably partial and subjective, intimately bound up with the systems of power, authority and creativity of particular times and places. Mapmakers do not simply represent the world, they construct it out of the ideas of their age. The book examines the significance of twelve world maps drawn from global history – beginning with the mystical representations of ancient history and ending with the satellite – derived imagery of today. It vividly recreates the environments and circumstances in which the maps were made, showing how each conveys a highly individual view of the world– the Jerusalem-centred Christian perspective of the fourteenth-century Herefordmappamundi; the earliest Korean map showing the world including Europe; the first truly globalised world view of the Portuguese Diogo Ribeiro in the early sixteenth century, the Peters projection of the 1970s which aimed to give equality to 'the third world'; and the earth according to Google. Brotton shows how the maps both influenced and reflected contemporary events and how, by reading it, we can better understand the world that produced it. Although the way we map our surroundings is once more changing dramatically, Brotton argues that maps today are no more definitive or objective than they have ever been – but that they continue to recreate and mediate our view of it. Readers of this book will never look at a map in quite the same way again.

**How Maps Change Things** Ward L. Kaiser, 2012–02–29 March 5th 2012 marks the 500th birthday of map-maker Gerhard Kremer, aka Mercator. There are many wishing the Flemish map maker well! From blogs to books the man who has shaped for many our world view is celebrated as often as vilified. Four centuries later, Arno Peters created what many see as a fair view of our world, but others see as a distorted or misleading map! Across the centuries it is maps that link these men and their impact on current human activity. This landmark book – How Maps Change Things: A Conversation About the Maps We Choose and the World We Want – looks at maps by these two men and others. This examination goes beyond maps as nouns, as tactile objects that show locations and distances. Maps are verbs ... don't be fooled we are told at the outset of How Maps Change Things. The book examines maps as change agents, reflecting intentions and setting agendas, stating who has what, and who has not. What are the messages sent by maps? What were Mercator, Peters and other map makers setting out to do with each of their creations? Ward Kaiser, author, publisher, pastor, and historian was instrumental in bringing the Peters Equal Area Map to North America. He has been leading the discussion of what maps mean and the power of maps in framing human activities. In How Maps Change Things Kaiser takes a passionate view of how

maps illustrate and influence the significant paths humans pursue. Rather than looking for definitive answers, Kaiser focuses on asking thought-provoking questions. What does our world, through the view of maps, really look like and what does the perspective (or frame of reference or bias) of the viewer mean to the map and its view? Are all maps simply propaganda for the hidden agenda of the map-maker? What is the world we get and what is the world we want ... and who cares and why? Kaiser has stimulated an impressive and important conversation.

*A History of the World in 12 Maps* Jerry Brotton,2013-11-14 A New York Times Bestseller "Maps allow the armchair traveler to roam the world, the diplomat to argue his points, the ruler to administer his country, the warrior to plan his campaigns and the propagandist to boost his cause... rich and beautiful." - Wall Street Journal Throughout history, maps have been fundamental in shaping our view of the world, and our place in it. But far from being purely scientific objects, maps of the world are unavoidably ideological and subjective, intimately bound up with the systems of power and authority of particular times and places. Mapmakers do not simply represent the world, they construct it out of the ideas of their age. In this scintillating book, Jerry Brotton examines the significance of 12 maps - from the almost mystical representations of ancient history to the satellite-derived imagery of today. He vividly recreates the environments and circumstances in which each of the maps was made, showing how each conveys a highly individual view of the world. Brotton shows how each of his maps both influenced and reflected contemporary events and how, by considering it in all its nuances and omissions, we can better understand the world that produced it. Although the way we map our surroundings is more precise than ever before, Brotton argues that maps today are no more definitive or objective than they have ever been. Readers of this beautifully illustrated and masterfully argued book will never look at a map in quite the same way again. "A fascinating and panoramic new history of the cartographer's art." - The Guardian "The intellectual background to these images is conveyed with beguiling erudition... There is nothing more subversive than a map." - The Spectator "A mesmerizing and beautifully illustrated book." -The Telegraph

The Changing World Religion Map Stanley D. Brunn,2015-02-03 This extensive work explores the changing world of religions, faiths and practices. It discusses a broad range of issues and phenomena that are related to religion, including nature, ethics, secularization, gender and identity. Broadening the context, it studies the interrelation between religion and other fields, including education, business, economics and law. The book presents a vast array of examples to illustrate the changes that have taken place and have led to a new world map of religions. Beginning with an introduction of the concept of the "changing world religion map", the book first focuses on nature, ethics and the environment. It examines humankind's eternal search for the sacred, and discusses the emergence of "green" religion as a theme that cuts across many faiths. Next, the book turns to the theme of the pilgrimage, illustrated by many examples from all parts of the world. In its discussion of the interrelation between religion and education, it looks at the role of missionary movements. It explains the relationship between religion, business, economics and law by means of a discussion of legal and moral frameworks, and the financial and business issues of religious organizations. The next part of the book explores the many "new faces" that are part of the religious landscape and culture of the Global North (Europe, Russia, Australia and New Zealand, the U.S. and Canada) and the Global South (Latin America, Africa and Asia). It does so by looking at specific population movements, diasporas, and the impact of globalization. The volume next turns to secularization as both a phenomenon occurring in the Global religious North, and as an emerging and distinguishing feature in the metropolitan, cosmopolitan and gateway cities and regions in the Global

South. The final part of the book explores the changing world of religion in regards to gender and identity issues, the political/religious nexus, and the new worlds associated with the virtual technologies and visual media.

*Mapping the Nation* Susan Schulten, 2012-06-29 "A compelling read" that reveals how maps became informational tools charting everything from epidemics to slavery (Journal of American History). In the nineteenth century, Americans began to use maps in radically new ways. For the first time, medical men mapped diseases to understand and prevent epidemics, natural scientists mapped climate and rainfall to uncover weather patterns, educators mapped the past to foster national loyalty among students, and Northerners mapped slavery to assess the power of the South. After the Civil War, federal agencies embraced statistical and thematic mapping in order to profile the ethnic, racial, economic, moral, and physical attributes of a reunified nation. By the end of the century, Congress had authorized a national archive of maps, an explicit recognition that old maps were not

relics to be discarded but unique records of the nation's past. All of these experiments involved the realization that maps were not just illustrations of data, but visual tools that were uniquely equipped to convey complex ideas and information. In *Mapping the Nation*, Susan Schulten charts how maps of epidemic disease, slavery, census statistics, the environment, and the past demonstrated the analytical potential of cartography, and in the process transformed the very meaning of a map. Today, statistical and thematic maps are so ubiquitous that we take for granted that data will be arranged cartographically. Whether for urban planning, public health, marketing, or political strategy, maps have become everyday tools of social organization, governance, and economics. The world we inhabit—saturated with maps and graphic information—grew out of this sea change in spatial thought and representation in the nineteenth century, when Americans learned to see themselves and their nation in new dimensions.

**The Longest Line on the Map** Eric Rutkow, 2019-01-08 From the award-winning author of *American Canopy*, a dazzling account of the world's longest road, the Pan-American Highway, and the epic quest to link North and South America, a dramatic story of commerce, technology, politics, and the divergent fates of the Americas in the nineteenth and twentieth centuries. The Pan-American Highway, monument to a century's worth of diplomacy and investment, education and engineering, scandal and sweat, is the longest road in the world, passable everywhere save the mythic Darien Gap that straddles Panama and Colombia. The highway's history, however, has long remained a mystery, a story scattered among government archives, private papers, and fading memories. In contrast to the Panama Canal and its vast literature, the Pan-American Highway—the United States' other great twentieth-century hemispheric infrastructure project—has become an orphan of the past, effectively erased from the story of the "American Century." *The Longest Line on the Map* uncovers this incredible tale for the first time and weaves it into a tapestry that fascinates, informs, and delights. Rutkow's narrative forces the reader to take seriously the question: Why couldn't the Americas have become a single region that "is" and not two near irreconcilable halves that "are"? Whether you're fascinated by the history of the Americas, or you've dreamed of driving around the globe, or you simply love world records and the stories behind them, *The Longest Line on the Map* is a riveting narrative, a lost epic of hemispheric scale.
