Computational Fluid Dynamics Eduardo Ramos, 2001 This volume presents recent advances in computational fluid dynamics. The topics range from fundamentals and computational techniques to a wide variety of applications in astronomy, applied mathematics, meteorology, etc. They describe recent calculations in direct numerical simulation of turbulence, applications of turbulence modeling of pollution problems in mesoscale meteorology, industrial applications, etc. The emerging topic of parallelization of CFD codes is also presented. This volume will appeal to graduate students, researchers and anyone interested in using digital computation as a powerful tool for solving fluid dynamics problems in science and technology.

New Approaches to the Temple of Zeus at Olympia András Patay-Horváth, 2015-09-04 This volume brings together the proceedings of an international and interdisciplinary symposium held at Budapest between 8th and 10th May 2014. It was the first event dealing exclusively with the temple of Zeus at Olympia, which was, at the time of its construction, the largest temple in mainland Greece, and which has remained the largest ancient building of the Peloponnese ever since. Contributors come from eight countries, namely Austria, France, Germany, Greece, Hungary, Italy, Japan, and the UK, and from several different fields of classical studies, including archaeology, ancient history, numismatics, epigraphy and architecture. The contributions deal with widely different aspects of the building and its sculptural decoration, including masons' marks, metrology, the usage of different marbles, and depictions of invisible gods, and approach these issues from new and unique perspectives. Some papers focus on the cult of Zeus, or on inscriptions found in or on coins associated with the sanctuary; others describe how later authors might have used the monument, or bridge the gap between classical studies and the latest digital technologies applied to archaeology and cultural heritage. As

such, all of the essays gathered here will inspire classical scholars to make use of these new research paths.

Turbulence and Magnetic Fields in Astrophysics Edith Falgarone, Thierry Passot, 2008-01-11 This book contains review articles of most of the topics addressed at the conference on Simulations of Magnetohydrodynamic turbulence in astrophysics: recent achievements and perspectives which took place from July 2 to 6, 2001 at the Institut Henri Poincaré in Paris. We made the choice to publish these lectures in a tutorial form so that they can be read by a broad audience. As a result, this book does not give an exhaustive view of all the subjects addressed during the conference. The main objective of this workshop which gathered about 90 scientists from different fields, was to present and confront recent results on the topic of turbulence in magnetized astrophysical environments. A second objective was to discuss the latest generation of numerical codes, such as those using adaptive mesh refinement (AMR) techniques. During a plenary discussion at the end of the workshop discussions were held on several topics, often at the heart of vivid controversies. Topics included the timescale for the dissipation of magneto-hydrodynamical (MHD) turbulence, the role of boundary conditions, the characteristics of imbalanced turbulence, the validity of the polytropic approach to Alfvén waves support within interstellar clouds, the source of turbulence inside clouds devoid of stellar activity, the timescale for star formation, the Alfvén Mach number of interstellar gas motions, the formation process for helical fields in the interstellar medium. The impact of small upon large scales was also discussed.

Physics of the Solar Corona Markus Aschwanden, 2006-08-26 A thorough introduction to solar physics based on recent spacecraft observations. The author introduces the solar corona and sets it in the context of basic plasma physics before moving on to discuss plasma instabilities and plasma heating processes. The latest results on coronal heating and radiation are presented. Spectacular phenomena such as solar flares and coronal mass ejections are described in detail, together with their potential effects on the Earth.

Circumstellar Media in Late Stages of Stellar Evolution Robin E. S. Clegg, I. R. Stevens, W. P. S. Meikle, 1994-08-25 In the last throes of their lives, how do low- and high-mass stars interact with their immediate surroundings? How does the circumstellar medium affect the shape of a nebula? How are supernovae effected by a dense medium? And what do we understand of how stellar winds interact with their environments? These and many other exciting issues are addressed in these proceedings, from the 34th Herstmonceux conference, held in Cambridge. Highlights of developments in the field covered in this volume include the latest observational results that show how various types of stellar ejecta differ in shape, and a unified view of the physical processes involved; as well as the latest results on the media around supernovae 1987A and 1993J. This timely volume provides review articles that serve both as an excellent introduction for graduate students, and a handy reference for researchers; and up-to-date research papers for those who want to keep abreast of developments in the field.

Astronomy with Radioactivities Roland Diehl,Dieter H. Hartmann,Nikos Prantzos,2010-10-01 This book introduces the reader to the field of nuclear astrophysics, i.e. the acquisition and reading of measurements on unstable isotopes in different parts of the universe. The authors explain the role of radioactivities in astrophysics, discuss specific sources of cosmic isotopes and in which special regions they can be observed. More specifically, the authors address stars of different types, stellar explosions which terminate stellar evolutions, and other explosions triggered by mass transfers and instabilities in binary stars. They also address nuclear reactions and transport processes in interstellar space, in the contexts of cosmic rays and of chemical evolution. A special chapter is dedicated to the solar system which even provides material samples. The book also contains a description of key tools which astrophysicists employ in those particular studies and a glossary of key terms in astronomy with radioactivities.
