Tales from the Back Bumper Christopher Garrish, 2013-05-01

Buckle up your seatbelt and prepare for a ride on the history highway! Christopher Garrish has collected hundreds of facts and photos (not to mention licence plates) in this astonishing assembly of motoring madness. Discover what the earliest motorists in the province used to build their own licence plates; why some licence plate numbers are worth waiting in line overnight for; which offensive acronym slipped under the radar and found its way onto a licence plate before authorities recalled it; and dozens of other entertaining anecdotes. Whether you're a car connoisseur or a tailgating trucker, you'll find that *Tales from the Back Bumper* is more than just an ABC-123 account of licence plates. This book is not only the definitive guide to everything from plate prefixes and decals to provincial slogans and vanity plates, but also a fascinating, behind-the-scenes look at how cars—and by extension

licence plates—have played a part in our exploration and navigation of “Beautiful British Columbia” for the past hundred years.

Applications of Operational Research in Business and Industries Angappa Gunasekaran, Jai Kishore Sharma, Samarjit Kar, 2023-05-21 Effective decision-making while trading off the constraints and conflicting multiple objectives under rapid technological developments, massive generation of data, and extreme volatility is of paramount importance to organizations to win over the time-based competition today. While agility is a crucial issue, the firms have been increasingly relying on evidence-based decision-making through intelligent decision support systems driven

by computational intelligence and automation to achieve a competitive advantage. The decisions are no longer confined to a specific functional area. Instead, business organizations today find actionable insight for formulating future courses of action by integrating multiple objectives and perspectives. Therefore, multi-objective decision-making plays a critical role in businesses and industries. In this regard, the importance of Operations Research (OR) models and their applications enables the firms to derive optimum solutions subject to various constraints and/or objectives while considering multiple functional areas of the organizations together. Hence, researchers and practitioners have extensively applied OR models to solve various organizational issues related to manufacturing, service, supply chain and logistics management, human resource management, finance, and market analysis, among others. Further, OR models driven by AI have been enabled to provide intelligent decision-support frameworks for achieving sustainable development goals. The present issue provides a unique platform to showcase the contributions of the leading international experts on production systems and business from academia, industry, and government to discuss the issues in intelligent manufacturing, operations management, financial

management, supply chain management, and Industry 4.0 in the Artificial Intelligence era. Some of the general (but not specific) scopes of this proceeding entail OR models such as Optimization and Control, Combinatorial Optimization, Queuing Theory, Resource Allocation Models, Linear and Nonlinear Programming Models, Multi-objective and multi-attribute Decision Models, Statistical Quality Control along with AI, Bayesian Data Analysis, Machine Learning and Econometrics and their applications vis-à-vis AI & Data-driven Production Management, Marketing and Retail Management, Financial Management, Human Resource Management, Operations Management, Smart Manufacturing & Industry 4.0, Supply Chain and Logistics Management, Digital Supply Network, Healthcare Administration, Inventory Management, consumer behavior, security analysis, and portfolio management and sustainability. The present issue shall be of interest to the faculty members, students, and scholars of various engineering and social science institutions and universities, along with the practitioners and policymakers of different industries and organizations.

The Leader's Character Dr. Gregory L. Cruell,2023-02-28 The Department Of Defense Dictionary of Military and Associated Terms defines responsibility as, the obligation to carry forward an assigned task to a successful conclusion. With responsibility comes authority to direct and take the necessary action to ensure success. Simply put, the practicing and developing leader has the ability to respond. This book is about the leader's responsibility to never stop reinforcing and developing character that people want to follow. No organization is going to place someone in a position of responsibility without trusting or believing that the leader possesses the character and necessary ability for successful accomplishment of it's most important task; leading the organization's people.

Although ours is a vibrant ecosystem that encourages young minds to take the entrepreneurial plunge, the road ahead is full of pitfalls. Unlocking Unicorn Secrets captures the entrepreneurial journeys of some of India's new-age founders and looks at the challenges they faced and how they overcame them. It covers themes such as developing an idea, building out the minimum viable product (MVP), finding a co-founder, setting up the founding team, raising funds and scaling the business, among others. Through primary research and a series of interviews conducted with the founders of these billion-dollar companies, the authors weave a narrative that is both accessible and informative. The book is a manifestation of the authors' passion for inculcating the entrepreneurial mindset in our nation's youth, which they do masterfully, by illustrating the success stories of India's top unicorns.
