Nonlinear Maps and their Applications Ricardo López-Ruiz, Danièle Fournier-Prunaret, Yoshifumi Nishio, Clara Grácio, 2015-03-11 In the field of Dynamical Systems, nonlinear iterative processes play an important role. Nonlinear mappings can be found as immediate models for many systems from different scientific areas, such as engineering, economics, biology, or can also be obtained via numerical methods permitting to solve non-linear differential equations. In both cases, the understanding of specific dynamical behaviors and phenomena is of the greatest interest for scientists. This volume contains papers that were presented at the International Workshop on Nonlinear Maps and their Applications (NOMA 2013) held in Zaragoza, Spain, on September 3-4, 2013. This kind of collaborative effort is of paramount importance in promoting communication among the various groups that work in dynamical systems and networks in their research theoretical studies as well as for applications. This volume is suitable for graduate students as well as researchers in the field.

Biharmonic Submanifolds And Biharmonic Maps In Riemannian Geometry Ye-lin Ou, Bang-yen Chen, 2020-04-04 The book aims to present a comprehensive survey on biharmonic submanifolds and maps from the viewpoint of Riemannian geometry. It provides some basic knowledge and tools used in the study of the subject as well as an overall picture of the development of the subject with most up-to-date important results. Biharmonic submanifolds are submanifolds

whose isometric immersions are biharmonic maps, thus biharmonic submanifolds include minimal submanifolds as a subclass. Biharmonic submanifolds also appeared in the study of finite type submanifolds in Euclidean spaces. Biharmonic maps are maps between Riemannian manifolds that are critical points of the bienergy. They are generalizations of harmonic maps and biharmonic functions which have many important applications and interesting links to many areas of mathematics and theoretical physics. Since 2000, biharmonic submanifolds and maps have become a vibrant research field with a growing number of researchers around the world, with many interesting results have been obtained. This book containing basic knowledge, tools for some fundamental problems and a comprehensive survey on the study of biharmonic submanifolds and maps will be greatly beneficial for graduate students and beginning researchers who want to study the subject, as well as researchers who have already been working in the field.

Genome Mapping and Genomics in Fishes and Aquatic Animals Thomas D. Kocher, Chittaranjan Koley, 2008-06-07 Mapping of animal genomes has generated huge databases and several new concepts and strategies, which are useful to elucidate origin, evolution and phylogeny. Genetic and physical maps of genomes further provide precise details on chromosomal location, function, expression and regulation of academically and economically important genes. The series Genome Mapping and Genomics in Animals provides comprehensive and up-to-date reviews on genomic

research on a large variety of selected animal systems, contributed by leading scientists from around the world. This volume summarizes the first era of genomic studies of aquaculture species, in which the tools and resources necessary to support whole-genome sequencing were developed. These tools will enhance efforts toward selective breeding of aquaculture species. Included in this volume are summaries of work on salmonids, cyprinids, catfish, tilapias, European sea bass, Japanese flounder, shrimps and oysters.

Maps and Related Cartographic Materials Mary Larsgarrd L,2013-03-07 Make maps and other cartographic materials more easily accessible and usable! *Maps and Related Cartographic Materials: Cataloging, Classification, and Bibliographic Control* is a format-focused reference manual for catalogers that should occupy a prominent place on your reference shelf. Outside of standard cartographic cataloging tools, the bibliographic treatment of all forms of cartographic materials has never been compiled into one useful source. This book separately examines the treatment of all major cartographic format types and outlines the way each should be cataloged. With *Maps and Related Cartographic Materials: Cataloging,*

Classification, and Bibliographic Control, you will learn to catalog the major formats of cartographic materials, including: sheet maps early and contemporary atlases remote-sensed images such as aerial photographs and satellite images globes geologic sections digital material items on CD-ROM Although it is primarily aimed at the beginning "maps cataloger," Maps and Related Cartographic Materials: Cataloging, Classification, and Bibliographic Control will also be very helpful to the experienced cataloger who has not yet attempted to catalog, say, maps on CD-ROM. In each chapter, the experience and expertise of an established map cataloger or map librarian is the main source of information, giving you practical and up-to-date advice.

Chaotic Maps Goong Chen, Yu Huang, 2022-05-31 This book consists of lecture notes for a semester-long introductory graduate course on dynamical systems and chaos taught by the authors at Texas A&M University and Zhongshan University, China. There are ten chapters in the main body of the book, covering an elementary theory of chaotic maps in finite-dimensional spaces. The topics include one-dimensional dynamical systems (interval maps),

bifurcations, general topological, symbolic dynamical systems, fractals and a class of infinite-dimensional dynamical systems which are induced by interval maps, plus rapid fluctuations of chaotic maps as a new viewpoint developed by the authors in recent years. Two appendices are also provided in order to ease the transitions for the readership from discrete-time dynamical systems to continuous-time dynamical systems, governed by ordinary and partial differential equations. Table of Contents: Simple Interval Maps and Their Iterations / Total Variations of Iterates of Maps / Ordering among Periods: The Sharkovski Theorem / Bifurcation Theorems for Maps / Homoclinicity. Lyapunoff Exponents / Symbolic Dynamics, Conjugacy and Shift Invariant Sets / The Smale Horseshoe / Fractals / Rapid Fluctuations of Chaotic Maps on \mathbb{R}^N / Infinite-dimensional Systems Induced by Continuous-Time Difference Equations

Brain Theory Adrianus Aertsen,Valentino Braitenberg,1996 Hardbound. The present collection of papers focuses on the subject of vision. The papers bring together new insights and facts from various branches of experimental and theoretical neuroscience. The experimental facts presented in the volume stem from disparate fields, such as neuroanatomy, electrophysiology, optical imaging and psychophysics. The theoretical models in part are unsophisticated, yet still inspiring, while others skilfully apply advanced mathematical reasoning to results of experimental measurements. The book is the fifth in a series of volumes intending to define a theory of the brain by bringing together formal reasoning and experimental facts. The reader is thus being introduced to a new kind of brain science, where facts and theory are beginning to blend together.

NEUTROSOPHIC RW CONTINUITY, NEUTROSOPHIC RW-OPEN MAPS AND CLOSED MAPS D. SAVITHIRI,C. JANAKI, In this paper we introduce the concept of neutrosophic rw-continuity, neutrosophic rw-open maps and closed maps in neutrosophic topological spaces and some of their properties are discussed.

Stochastic Analysis and Random Maps in Hilbert Space A. A. Dorogovtsev,1994-01-01 This book is devoted to stochastic operators in Hilbert space. A number of models in modern probability theory apply the notion of a stochastic operator in explicit or latent form. In this book, objects from the Gaussian case are considered. Therefore, it is useful to consider all random variables and elements as functionals from the Wiener process or its formal derivative, i.e. white noise. The book

consists of five chapters. The first chapter is devoted to stochastic calculus and its main goal is to prepare the tools for solving stochastic equations. In the second chapter the structure of stochastic equations, mainly the structure of Gaussian strong linear operators, is studied. In chapter 3 the definition of the action of the stochastic operator on random elements is considered. Chapter 4 deals with the mathematical models in which the notions of stochastic calculus arise and in the final chapter the equation with random operators is considered.

Map Skills - Europe (eBook) R. Scott House, Patti M. House, 2010-09-01 Explore the varied features of the European continent while reinforcing basic map reading skills. Sixteen student pages and accompanying blackline and full-color maps coordinate to provide a relational study of the elevation, vegetation, products, population, and peoples of Europe. Full-color maps are provided as transparencies for print books and PowerPoint slides for eBooks. Student pages challenge students to combine maps and additional resources in order to answer questions and make judgments. Question topics follow the Five Themes of Geography as outlined by the National Geographic Society: finding absolute and relative locations on a map, relating physical and human characteristics to an area, understanding human relationships to the environment, tracing movement of peoples and goods throughout an area, and organizing countries and continents into regions for detailed study.

Brill's Companion to Diet and Logistics in Greek and Roman Warfare ,2023-12-04 The adage that an army “marches on its stomach” finds renewed emphasis in this collection of essays. Focusing on military diet and supply from Homer through the Roman Empire, *Diet and Logistics in Greek and Roman Warfare* explains regional dietary options and reassesses traditional notions of “provisioning” while exploring topics ranging from strategy and subterfuge to trade and terror. Through fresh insights drawn from current research and excavation spanning the Greco-Roman world, contributors confirm how providing food and drink for soldiers was critical to every army's success and survival. This volume stimulates reevaluation of ancient militaries and encourages new research.
