Getting to Zero Alcohol-Impaired Driving Fatalities National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Accelerating Progress to Reduce Alcohol-Impaired Driving Fatalities, 2018-05-25 Alcohol-impaired driving is an important health and social issue as it remains a major risk to Americans' health today, surpassing deaths per year of certain cancers, HIV/AIDS, and drownings, among others, and contributing to long-term disabilities from head and spinal injuries. Progress has been made over the past decades towards reducing these trends, but that progress has been incremental and has stagnated more recently. Getting to Zero Alcohol-Impaired Driving Fatalities examines which interventions (programs, systems, and policies) are most promising to prevent injuries and death from alcohol-impaired driving, the barriers to action and approaches to overcome them, and which interventions need to be changed or adopted. This report makes broad-reaching recommendations that will serve as a blueprint for the nation to accelerate the progress in reducing alcohol-impaired driving fatalities.

Blood and Alcohol Michael Stapleton, 2013-05 This is a biography of my life and the lives that have touched mine as the son of veterinarian Dr. Bob Stapleton and Ruth Carter Stapleton, an evangelist and faith healer in the '70s, and as a nephew to a former president and First Lady, Jimmy Carter and Rosalynn Carter. It uncovers my life's journey of my encounters with the law, the press, the death of my mother and grandmother, as well as the good times with visits to the White House and Camp David, the Democratic National Conventions, the Ryder Cup and Masters, and the births of my children, to finally unveiling my struggle with alcohol.

Effects of Moderate Blood Alcohol Levels on Automobile Passing Behavior William O. Light, Charles G. Keiper, 1971 Sixteen clinically normal individuals drove in an optical driving simulator in both a non-alcohol and an alcohol condition. In both the 0 mg% (.00%) and the 90 mg% (.09%) blood alcohol level conditions, each subject was given 60 trials in which he was required to make and execute a decision to pass or to continue following a lead car. Times available to safely complete a pass and vehicle speeds were presented in a random manner. During the alcohol condition, subjects not only attempted and completed significantly more passes but also experienced more accidents. Results of this experiment suggest that the effects of moderate levels of blood alcohol must be examined not only as they affect perceptual motor skills, but also as they may more subtly affect risk-taking behavior and decision processes involved in operating a motor vehicle.

Drugs, Addiction, and the Brain George F. Koob,Michael A. Arends,Michel Le Moal,2014-07-12 Drugs, Addiction, and the Brain explores the molecular, cellular, and neurocircuitry systems in the brain that are responsible for drug addiction. Common neurobiological elements are emphasized that provide novel insights into how the brain mediates the acute rewarding effects of drugs of abuse and how it changes during the transition from initial drug use to compulsive drug use and addiction. The book provides a detailed overview of the pathophysiology of the disease. The information provided will be useful for neuroscientists in the field of addiction, drug abuse treatment providers, and undergraduate and postgraduate students who are interested in learning the diverse effects of drugs of abuse on the brain. Full-color circuitry diagrams of brain regions implicated in each stage of the addiction cycle Actual data figures from original sources illustrating key concepts and findings Introduction to basic neuropharmacology terms and concepts Introduction to numerous animal models used to study diverse aspects of drug use. Lying Minds: An Insider's Guide to Alcoholism David Horry,2020 Lying Minds: An Insiders Guide to Alcoholism Alcoholics are not damaged, faulty or broken, and we aren't bad or weak people, we are deceived: deceived by our own minds. Most people that drink heavily in their youth will mature out of it and those that drink to relieve some distress will moderate their drinking if that distress is removed, but we do not. Our minds do not spontaneously curb excessive drinking, they do the opposite: they encourage it. Alcohol changes the way that we think, lowers our mood, and distorts our memory. Our minds compel us to drink more and we become progressively more anxious, depressed, fearful, alone and hopeless... all of which are relieved by drinking. Drinking seems to us that it brings relief from our problems whereas in fact it amplifies them, so we drink more. This is how our minds trap us into a self-reinforcing pursuit of alcohol, and that does not happen to most other people. We are not broken or faulty but we are different. All people are different in some way. Some are tall, some are short, but we also all have unseen differences within us. Some are bolder than others, some more timid, some artistic and some more analytical. But we have differences that make us susceptible to addiction, and once that susceptibility is engaged then it forms into an ever strengthening force that propels us towards our own destruction. This book explains how our minds become deceived by alcohol and how it changes our motivation, emotions, memory and thinking. If you want to understand the why's of alcoholism; why we have to have that first drink, why we can't stop at one, why we drink more often than we intend, why we keep drinking even though bad things happen, and why we can't drink like normal people, then this book will tell you. It explains why we can never safely drink again, and the deeper truth... that we never could in the first place.

Perfect Drinking and its Enemies Kari Poikolainen ,2014 Learn how to shun the enemies of perfect drinking. Protect yourself from moral panic, well-meant nannying and patronizing. Know the health risks. Avoid the dangers of alcoholism. Seek to oppose counterproductive alcohol policies.

A Great and Growing Evil? Royal College of Physicians, 2005-09-26 This new report shows that no system in the body is immune to alcohol. It discusses the role of the medical profession in identification and treatment of alcohol problems and suggests ways of implementing more effective prevention.

Alcohol in America United States Department of Transportation, National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Elizabeth Hanford Dole, Dean R. Gerstein, Steve Olson, 1985-02-01 Alcohol is a killer—1 of every 13 deaths in the United States is alcohol-related. In addition, 5 percent of the population consumes 50 percent of the alcohol. The authors take a close look at the problem in a classy little study, as The Washington Post called this book. The Library Journal states, ...[T]his is one book that addresses solutions....And it's enjoyably readable....This is an excellent review for anyone in the alcoholism prevention business, and good background reading for the interested layperson. The Washington Post agrees: the book ...likely will wind up on the bookshelves of counselors, politicians, judges, medical professionals, and law enforcement officials throughout the country.
