Advanced Networking Concepts Applied Using Linux on IBM System z Lydia Parziale, Ben Louie, Eric Marins, Tiago Nunes dos Santos, Srivatsan Venkatesan, IBM Redbooks, 2012-03-06 This IBM® Redbooks® publication describes

important networking concepts and industry standards that are used to support high availability on IBM System z®. Some of the networking standards described here are VLANs, VLAN trunking, link aggregation, virtual switches, VNICS, and load-balancing. We examine the various aspects of network setups and introduce the main Linux on System z networking commands and configuration files. We describe the management of network interface parameters, assignment of addresses to a network interface, and usage of the `ifconfig` command to configure network interfaces. We provide an overview of connectivity options available on the System z platform. We also describe high availability concepts and building a high availability solution using IBM Tivoli® System Automation. We also provide the implementation steps necessary to build a redundant network connections set up between an IBM z/VM® system and the external network switches using two Open Systems Adapter-Express 3 (OSA-Express 3) adapters with 10 Gb Ethernet ports. We describe the tests performed in our lab environment. The objectives of these tests were to gather information about performance and failover from the perspective of a real scenario, where the concepts of described in this book were applied. This book is focused on information that is practical and useful for readers with experience in network analysis and engineering networks, System z and Linux systems administrators, especially for readers that administer networks in their day-to-day activities. For additional reading: A Technote is available that explains changes to using channel bonding interfaces introduced with SLES 11 SP 2. Annual Plant Reviews, Control of Primary Metabolism in Plants William Plaxton, Michael T. McManus, 2008-04-15 The ability to control the rates of

metabolic processes in response to changes in the internal or external environment is an indispensable attribute of living cells that must have arisen with life's origin. This adaptability is necessary for conserving the stability of the intracellular environment which is, in turn, essential for maintaining an efficient functional state. The advent of genomics, proteomics, and metabolomics has revolutionised the study of plant development and is now having a significant impact on the study of plant metabolism and its control. In the last few years, significant advances have been made, with the elucidation of enzyme gene families and the identification of new proteinaceous and allosteric regulators. The first part of this volume is devoted to generic aspects of metabolic control, with chapters on the key control points in pathways. Part Two considers the control of specific pathways, with detailed descriptions (including structures) and discussions of the regulation of these pathways, particularly in terms of the enzymology. The book is directed at researchers and professionals in plant biochemistry, physiology, molecular biology and cell biology.

Long Hot Summer Rosemary Friedman, 2016-01-01 Lorna Brown has everything...so why does she feel so dissatisfied? The clothes, the house, the Poggenpohl kitchen do nothing to give her life meaning. The death of a friend makes her question her existence still further. Then she meets Armand, her daughter's friend, and Lorna's yearning for something different takes shape. Envyng the assurance and spontaneity of her daughter and her companions, she suddenly makes a decision and abandons her easy comfort for a squat in Regent's Park. Will Lorna find there the contentment she craves?
