Processes of Animal Memory (PLE: Memory) Douglas L. Medin,William A. Roberts,Roger T. Davis,2014-05-09

Originally published in 1976, this volume contains new and original contributions of the time addressed to a related set of ideas concerning processes of memory in animals. The theme is that animals remember and that theories of animal learning must take this into account as well as the coding processes that have been assumed to be specific to human beings. The focus of the book is on processes, and some progress is reported in differentiating types of memory. The emphasis in applying animal work to studies of human memory is made not in terms of paradigms but in terms of processes implicated via performance in a variety of tasks. Also, many of the chapters reflect the usefulness of applying a memory framework to a variety of nonmemory paradigms. This work will be essential reading for all those interested in animal as well as human memory, and provided the most up to date and broadest examination of animal memory processes at the time, from both a theoretical and conceptual framework.

Animal Memory Werner K. Honig,P. H. R. James,2016-07-29 Animal Memory is based on the proceedings of a symposium held at Dalhousie University in the summer of 1969. Each of the seven chapters provide broad coverage of the topic with which it is concerned, and the experimental work reported is representative of the most significant developments in the field. The book includes two studies on associative memory—the memory of one event which is essential to its association (over a delay) with subsequent events. One study shows that animals can remember events from one learning trial to the next and that their behavior will be determined largely by the sequences of trials with differing outcomes; the other presents research on the association of flavors with toxicosis in a conditioning paradigm. Separate chapters deal with retentive memory—the retention and forgetting of learned behavior over time; and the physiological basis of memory in terms of consolidation theory. These studies demonstrate that animals do forget and examine theories of forgetting. The final chapter provides a critical discussion based on all of the foregoing material in which the topics covered in the book are related to current work on human retention and forgetting.

Theories of Animal Memory Donald F. Kendrick,Mark E. Rilling,M. Ray Denny,2014-04-04 First published in 1986. This book is concerned with the transition of animal learning from a strict stimulus-response (S-R) approach to a more cognitive approach. In response to noted past research that was guided by some perspective or theoretical framework based partly on a combination of research results and individual opinions about what animals can do. This volume was thus conceived as a collection of chapters in which animal memory researchers could publicly state their opinions about animal memory, with little concern for substantiating them with test data. This volume is organized in three main sections of three chapters each. The first section, The Grand Approach, is a collection of chapters with a meta-theoretical perspective. The second section, Memory Processes, presents three chapters concerned with the processes, properties, and mechanisms of short-term memory in animals. The third section, Theoretical Issues, presents two highly developed theories of animal memory, one based on pigeon short-term memory experiments and one based on delayed alternation in the rat

Human and Animal Memory Philip T. Smith,1986 In the first part of this book, which is devoted to human memory, there is a noticeable interaction between, on the one hand, an interest in dementia and amnesia, and on the other hand, the development of normal models of memory. Although verbal memory figures prominently, there are several

papers reflecting an interest in visual processing and one paper on memory for odours. It is only in recent years that animal memory has received serious attention and that workers in this area have used concepts and theories from the study of human memory to guide their studies of, for example, short-term memory processes in animals and their role in associative learning. This volume will provide such researchers with an easy access to the ideas and results of those concerned with human memory. At the same time the latter may find illuminating those chapters dealing with subjects that cannot easily be studied in people, such as the brain mechanisms underlying spatial memory discussed by Morris, Hagan and Rawlins, or the effect on such memories of electroconvulsive shock described by Maki.

Animal Cognition Nick Lund, 2013-10-23 Animal Cognition looks at how non-human animals process information from their environment. Nick Lund has written an accessible and engaging account of this area of comparative psychology. The book contains chapters on animal navigation (including homing behaviour and migration), animal communication methods and research into animal language, and attempts to teach language to non-human animals. A chapter on memory includes models of memory in non-human animals and discusses the importance of memory in navigation and foraging behaviour. Animal Cognition is designed to cover the AQA(A) A2 level specification but will also be of interest to undergraduates new to comparative psychology. It is well illustrated and includes a study aids section with examination questions and answers, and key research summaries.

Animal Learning and Cognition N. J. Mackintosh, 2013-10-22 How do animals learn? By what means can animals be conditioned? This volume of the acclaimed Handbook of Perception and Cognition, Second Edition, reviews such basic models as Pavlovian conditioning as well as more modern models of animal memory and social cognition. Sure to represent a benchmark of a vast literature from diverse disciplines, this reference work is a useful addition to any library devoted to animal learning, conditioning behavior, and interaction.

The Cognitive Animal Marc Bekoff,Colin Allen,Gordon M. Burghardt,2002-06-21 The fifty-seven original essays in this book provide a comprehensive overview of the interdisciplinary field of animal cognition. The contributors include cognitive ethologists, behavioral ecologists, experimental and developmental psychologists, behaviorists, philosophers, neuroscientists, computer scientists and modelers, field biologists, and others. The diversity of approaches is both philosophical and methodological, with contributors demonstrating various degrees of acceptance or disdain for such terms as consciousness and varying degrees of concern for laboratory experimentation versus naturalistic research. In addition to primates, particularly the nonhuman great apes, the animals discussed include antelopes, bees, dogs, dolphins, earthworms, fish, hyenas, parrots, prairie dogs, rats, ravens, sea lions, snakes, spiders, and squirrels. The topics include (but are not limited to) definitions of cognition, the role of anecdotes in the study of animal cognition, anthropomorphism, attention, perception, learning, memory, thinking, consciousness, intentionality, communication, planning, play, aggression, dominance, predation, recognition, assessment of self and others, social knowledge, empathy, conflict resolution, reproduction, parent-young interactions and caregiving, ecology, evolution, kin selection, and neuroethology.

The Behavior of Animals Johan J. Bolhuis,Luc-Alain Giraldeau,Jerry A. Hogan,2021-12-29 The Behavior of Animals An updated view of animal behavior studies, featuring global experts The Behavior of Animals, Second Edition provides a broad overview of the current state of animal behavior studies with contributions from international experts. This edition includes new chapters on hormones and behavior, individuality, and human evolution. All chapters have been thoroughly revised and updated, and are supported by color illustrations, informative callouts, and accessible presentation of technical information. Provides an introduction to the study of animal behavior Looks at an extensive scope of topics- from perception, motivation and emotion, biological rhythms, and animal learning to animal cognition, communication, mate choice, and individuality. Explores the evolution of animal behavior including a critical evaluation of the assumption that human beings can be studied as if they were any other animal species. Students will benefit from an updated textbook in which a variety of contributors provide their expertise and global perspective in specialized areas

The Oxford Handbook of Comparative Cognition Thomas R. Zentall,Edward A. Wasserman,2012-03-20 In the past decade, the field of comparative cognition has grown and thrived. No less rigorous than purely behavioristic investigations, examinations of animal intelligence are useful for scientists and psychologists alike in their quest to understand the nature and mechanisms of intelligence. Extensive field research of various species has yielded exciting new areas of research, integrating findings from psychology, behavioral ecology, and ethology in a unique and wide-ranging synthesis of theory and research on animal cognition. The Oxford Handbook of Comparative Cognition contains sections on perception and illusion, attention and search, memory processes, spatial cognition, conceptualization and categorization, problem solving and behavioral flexibility, and social cognition processes including findings in primate tool usage, pattern learning, and counting. The authors have incorporated findings and theoretical approaches that reflect the current state of the field. This comprehensive volume will be a must-read for students and scientists who want to know about the state of the art of the modern science of comparative cognition.

In the Light of Evolution National Academy of Sciences,2014-05-19 Humans possess certain unique mental traits. Self-reflection, as well as ethic and aesthetic values, is among them, constituting an essential part of what we call the human condition. The human mental machinery led our species to have a self-awareness but, at the same

time, a sense of justice, willing to punish unfair actions even if the consequences of such outrages harm our own interests. Also, we appreciate searching for novelties, listening to music, viewing beautiful pictures, or living in well-designed houses. But why is this so? What is the meaning of our tendency, among other particularities, to defend and share values, to evaluate the rectitude of our actions and the beauty of our surroundings? What brain mechanisms correlate with the human capacity to maintain inner speech, or to carry out judgments of value? To what extent are they different from other primates' equivalent behaviors? In the Light of Evolution Volume VII aims to survey what has been learned about the human mental machinery. This book is a collection of colloquium papers from the Arthur M. Sackler Colloquium The Human Mental Machinery, which was sponsored by the National Academy of Sciences on January 11-12, 2013. The colloquium brought together leading scientists who have worked on brain and mental traits. Their 16 contributions focus the objective of better understanding human brain processes, their evolution, and their eventual shared mechanisms with other animals. The articles are grouped into three primary sections: current study of the mind-brain relationships; the primate evolutionary continuity; and the human difference: from ethics to aesthetics. This book offers fresh perspectives coming from interdisciplinary approaches that open new research fields and constitute the state of the art in some important aspects of the mind-brain relationships.
